Message from An Taoiseach

On behalf of the Government of Ireland, I warmly welcome the publication of Ireland's first Voluntary National Review. Ireland believes that the Sustainable Development Goals have the potential to dramatically improve our world. They represent a call to action for the international community to meet global challenges with ambition, determination and a sense of urgency.

Ireland is proud to have played a leading role in negotiating the 2030 Agenda, and we are determined now to work with our partners and stakeholders internationally, and at home to effectively implement the Goals. Earlier this year Ireland published its first National Implementation Plan, setting out a comprehensive approach to achieving these ambitions.

This Voluntary National Review allows us to take stock of Ireland's progress to date, and to reflect on the efforts we still need to make. We welcome the opportunity provided by the review process to share our experience with the international community, and to learn valuable lessons from other UN Member States. I strongly believe we can only achieve the Goals through cooperation and partnership, both within our societies and as part of the international community.

Leo Varadkar, T.D.
Taoiseach (Prime Minister)

A handwritten signature in black ink that reads "Leo Varadkar". The signature is fluid and cursive, written in a professional style.

Foreword by Minister

The Sustainable Development Goals [SDGs] set out a bold vision for a safer, fairer, more prosperous and sustainable world by 2030. The SDGs must be achieved for everyone if they are to be achieved at all. Ireland is therefore committed to leaving no one behind as it implements the SDGs, and to reaching the furthest behind first.

Ireland has adopted a 'whole-of-Government' approach to implementing the SDGs. This is in recognition of the fact that achieving the transformative change set out in the SDGs requires Government to adopt new approaches to collaboration across Departments, and also to facilitate innovative solutions coming from communities and stakeholders. Every Government Minister in Ireland has been assigned specific responsibilities in relation to one or more of the Goals.

As Minister for Communications, Climate Action and Environment, I have overall responsibility for ensuring coherent implementation of the SDGs across Government, and I launched Ireland's first SDGs National Implementation Plan in April this year.

The SDG National Implementation Plan reflects Ireland's long-established recognition of the importance of sustainable development, and our deep commitment to global cooperation and multilateralism. The strategic priorities of the Plan are increasing public awareness of the SDGs in Ireland, providing stakeholders with meaningful opportunities to engage with and participate in national implementation, supporting communities to make their own contributions to achieving the Goals, and aligning national policy with the SDGs.

The delivery of this Voluntary National Review [VNR] to the High-level Political Forum on Sustainable Development is an important milestone in Ireland's implementation of the SDGs and a demonstration of Ireland's ongoing commitment to fully addressing the Goals at home and to contributing to their successful implementation internationally. This VNR will also provide a baseline for Ireland's future SDG reporting at national, regional and international levels.

The VNR addresses each of the 17 SDGs and, for each Goal, discusses Ireland's national performance in detail, highlighting where we are doing well but being equally frank about the challenges we face. The VNR also presents information about Ireland's global contribution to every Goal, in many cases through the work of our official programme for overseas development assistance, Irish Aid. This detailed discussion of the 17 Goals, together with an extensive statistical annex, is intended to provide a comprehensive, honest and transparent assessment of Ireland's SDG performance.

Every Government Department has contributed to the preparation of the VNR, and the VNR process has been a useful learning experience for Ireland, and has undoubtedly increased the level of engagement with the SDGs across Government. It has also highlighted the potential to further break down policy silos between Departments and to develop more effective, interlinked, policies. The lessons learned from this VNR will inform how Ireland implements the SDGs in the years ahead.

Ireland has also benefitted, throughout the preparation of both the SDG National Implementation Plan and this VNR, from positive and constructive engagement from national stakeholders, and I want to make sure that stakeholders are provided with greater opportunities to engage with and participate in the SDG reporting process in subsequent reporting cycles. This is one of the reasons why I have established a national SDG Stakeholder Forum which met for the first time in June this year.

Achieving the SDGs will not be easy, but the Goals are a challenge that the global community, working together, can and must meet if we are to provide our children and future generations with the bright future they deserve. Through this first VNR, Ireland is demonstrating how we are playing our part to meet that global challenge.

Denis Naughten T.D.

Minister for Communications, Climate Action and Environment

1. Introduction

Ireland is proud to have played a significant role in the development and adoption of the 2030 Agenda on Sustainable Development as co-facilitator, together with Kenya, of the 2030 intergovernmental negotiations. As a country we want to continue to show leadership as the Sustainable Development Goals [SDGs] are implemented, both at home and across the world.

While Ireland adopted its first **National Sustainable Development Strategy** more than two decades ago, the SDGs require a step change in the integration of national social, economic and environmental policy. In addition, the SDGs underline the linkages between sustainable development in Ireland and our global engagement, particularly through the work of our overseas development programme, *Irish Aid*.

Ireland recognises the transformative ambition of the SDGs and considers that the 2030 Agenda, taken together with the Paris Agreement, the Addis Ababa Action Agenda, and the Sendai Framework for Disaster Risk Reduction, provides a framework for achieving a sustainable, prosperous and peaceful future for the world and its peoples. While the SDGs represent a global response to global challenges, Ireland also considers them to be nationally relevant and capable of having a transformative, positive impact on quality of life throughout Ireland.

In implementing the SDGs, Ireland will be guided by the following principles:

- ▶ That every person is entitled to a life of dignity in which they can fulfil their full potential; and
- ▶ That the economic, social and environmental requirements of such a life are fundamentally linked and interdependent on each other.

In putting these principles into practice, Ireland pledges that no one will be left behind and that we will endeavour to reach the furthest behind first.

Ireland has adopted a 'whole-of-Government' approach to the SDGs, and adopted its first **SDG National Implementation Plan** in March 2018. The SDG National Implementation Plan includes an ambitious '2030 Vision' for Ireland to fully achieve the SDGs at home and to support their implementation around the world.

The SDG National Implementation Plan builds on Ireland's current national Sustainable Development Strategy **Our Sustainable Future** and Ireland's Policy for International Development **One World, One Future**, and commits Ireland to mainstreaming the SDGs across national policy. Further details of the SDG National Implementation Plan are provided in Chapter 2 of this Voluntary National Review [VNR].

Ireland also recognises that, while governments hold primary responsibility for achieving the SDGs, the responsibility for achieving the SDGs does not lie exclusively with governments. The SDGs belong to everyone, in every community, in every country across the world. Therefore, Ireland strongly believes that partnerships between governments, civil society organisations, businesses and communities will be essential to achieving the SDGs.

Ireland's Starting Position for Implementing the SDGs

Ireland is well placed to achieve the SDGs. The recovery is now entering a more mature phase. The short-term outlook remains favourable with GDP forecast to grow by 5.6% this year and 4.0% next year. The recovery in output should continue to support job creation with the level of employment expected to exceed its pre-crisis peak this year. Indeed, the economy is approaching a situation that could reasonably be classified as full-employment. In parallel, Ireland's level of public indebtedness continues to improve but remains high, and the Government will continue to implement prudent budgetary policies designed to further reduce public debt levels. In addition, Ireland has the youngest population in Europe [by median age], with the highest share of population aged less than 15 years old and the lowest share of over 65 years old in the European Union [EU] and the proportion of the population in the 25-34 who have attained upper-secondary and/or higher-education is significantly above the Organisation for Economic Co-operation and Development [OECD] average.

Ireland enjoys peaceful and democratic conditions at home, and has a longstanding commitment to a just, stable, peaceful multilateral global system, underpinned by our membership of the United Nations [UN], the EU, the Council of Europe, the Organisation for Security and Co-operation in Europe [OSCE], and the OECD, and International Financial Institutions including the IMF and World Bank Group. As an EU Member State, Ireland operates within a well-developed legal and policy framework in relation to environmental protection, and the EU's treaties reflect the Union's commitment to achieving sustainable economic growth, gender equality, social cohesion, and sustainable development. Many of the policies and initiatives through which Ireland will implement the SDGs will be developed within an EU context, and Ireland will contribute to the development of the Union's own SDG response.

Multiple international assessments reflect Ireland's positive starting position while noting that challenges to fully achieving the SDGs remain. Ireland is currently ranked 8th Human Development Index, 13th in the 2018 World Happiness Report, 15th in the OECD Better Life Index, and 19th in the 2017 SDG Index.

Ireland is performing well in relation to **SDG 1: No Poverty**, **SDG 2: Zero Hunger**, **SDG 3: Good Health and Well-being**, **SDG 4: Quality Education**, **SDG 8: Decent Work and Economic Growth**, **SDG 9: Industry, Innovation and Infrastructure**, and **SDG 16: Peace, Justice and Strong Institutions**. Performance against other SDGs, though in many areas positive, is more mixed, and specific challenges exist in relation to housing, levels of obesity, achieving sustainable consumption and production, biodiversity and habitat destruction, mitigating and adapting to climate change, addressing entrenched inequalities and mainstreaming a gender perspective into policy. Detailed discussion of Ireland's performance under all 17 SDGs is discussed in Chapter 4, and further information is provided in the accompanying statistical annex.

Ireland also benefits from an active civil society which, together with the private sector, has engaged with the SDGs since their adoption. Both civil society groups and the private sector in Ireland are involved with projects related to achieving the SDGs and/or raising awareness of the SDGs among the general public. Public awareness of the SDGs in Ireland is increasing but, at 36%, remains below the EU average. Increasing SDG awareness in Ireland is a strategic priority under the SDG National Implementation Plan. Further details of Irish stakeholder engagement arrangements and SDG awareness raising measures are included in Chapter 2 of this VNR.

Separately to preparing this VNR, Ireland has facilitated the compilation of SDG-related observations from national stakeholders into a document which has been made available online through the HLPF website alongside Ireland's official VNR at: <https://sustainabledevelopment.un.org>

A high-level summary of feedback received from national stakeholders at a VNR consultation workshop is also included in Annex III of this VNR.

2. National Policy and Institutional Architecture

Policy Background

In March 2018 Ireland adopted its first SDG National Implementation Plan for the period 2018-2020. This will be the first in a series of Implementation Plans, each of which will serve to integrate the SDGs into national policy.

The **SDG National Implementation Plan 2018-2020** sets out Ireland's overall framework for implementing the SDGs, characterised by a 'whole-of-Government' approach. Political oversight is provided by the Government, while the Minister for Communications, Climate Action and Environment has overall responsibility for promoting the SDGs, and for overseeing their coherent implementation across Government. A robust SDG implementation and reporting framework has been established, involving all 17 Government Departments.

Strategic priorities of the Plan include:

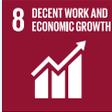

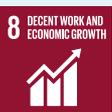

- ▶ **Awareness:** Increase public awareness of the SDGs, their relevance to Ireland and national efforts to achieve them.
- ▶ **Participation:** Provide stakeholders with meaningful opportunities to contribute to national follow-up and review processes regarding the Goals, and with opportunities to further the development of the national implementation framework.
- ▶ **Support:** Support and encourage communities and organisations to make their own contributions to achieving the Goals, and to foster public participation.
- ▶ **Policy Alignment:** Support and promote policies and initiatives across Government which contribute towards meeting the Goals at home and abroad, and identify opportunities for enhancing policy coherence.

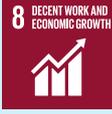

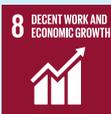

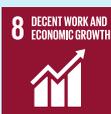

A key commitment under the SDG National Implementation Plan involves mainstreaming the SDGs across national policies, so that when relevant sectoral policies are developed or reviewed, Ireland's commitments under the SDGs will be taken into account. While this will be an incremental process, national policies which already refer to the SDGs include the **National Strategy for Women and Girls**, the **National Biodiversity Action Plan**, the **National Plan on Corporate Social Responsibility**, the **National Planning Framework** and the [upcoming] **Clean Air Strategy**.

Ireland's current national Sustainable Development Strategy, **Our Sustainable Future**, is an important component of Ireland's framework for implementing the SDGs, as is Ireland's Foreign Policy, **The Global Island**, which reinforces our commitment to contribute to international peace, security, human rights and sustainable development, and Ireland's Policy for International Development, **One World, One Future**, which sets out a vision of a sustainable and just world, where people are empowered to overcome poverty and hunger, and fully realise their rights and potential.

Our Sustainable Future sets out Ireland’s eight national themes and principles for achieving sustainable development. These themes reflect the traditional economic, social and environmental dimensions of sustainability, and are closely aligned with the SDGs. While some of the 17 SDGs are more closely aligned with individual national themes than others, Ireland’s implementation of every Goal will be informed by these themes and principles as a whole, in recognition of the fact that the economic, social and environmental dimensions of sustainable development cannot be advanced in isolation from each other. Table 2.1 sets how the SDGs align with Ireland’s national themes for sustainable development. However, in order to further integrate the SDGs into national policy, Ireland will prepare and adopt a new sustainable development strategy by the end of 2020, which will directly incorporate the SDGs.

Table 2.1: Our Sustainable Future Themes and Principles for Sustainable Development

| Theme | Principle | SDGs |
|--|--|--|
| Economy | Promote an innovative, competitive and low-carbon economy with the aim of achieving smart, sustainable and inclusive growth. |      |
| Satisfaction of human needs by the efficient use of resources | Prices should reflect the real costs to society of production and consumption activities and polluters should pay for the damage they cause to human health and the environment. |      |
| Equity between generations | The needs of current generations should be addressed without compromising the ability of future generations to meet their needs. |     |
| | Resources should be used within the capacity for regeneration. |     |

| Theme | Principle | SDGs |
|--|---|--|
| Gender equity | Women have a vital role in environmental management and development and their full participation is therefore essential to advance sustainable development. |        |
| Respect for ecological integrity and biodiversity | The abundance of wildlife and extent of habitats should be maintained, improved and restored where necessary, through sustainable management. |       |
| Social equity | Social inclusion should be promoted to ensure an improved quality of life for all. |          |
| Respect for cultural heritage / diversity | The quality of landscapes, the heritage of the man-made environment and historic and cultural resources should be maintained and improved. |   |
| Equity between countries and regions | Promote human rights and fundamental freedoms, by combating all forms of discrimination and contributing to the reduction of poverty. |          |

In developing the SDG National Implementation Plan 2018-2020, Ireland has also mapped its sectoral policies against the 17 SDGs and all 169 related targets, in order to identify which national policies are most relevant to which SDGs and their associated targets, and the extent of interlinkages between different national policies which can contribute to the achievement of multiple SDGs. The resulting **SDG Policy Map**, which is publicly available, will substantially enhance the ability of stakeholders to track Ireland's implementation of specific SDGs and associated targets, and to assess Ireland's response to the SDGs for potential policy gaps.

The Policy Map is intended to be a living document and will be updated as necessary on an ongoing basis. A copy of the current version is included in Annex IV of this VNR.

Translating the SDGs into a National Context

Meaningful implementation of the SDGs at the national level requires that each country, guided by the level of global ambition reflected in the Goals, defines what constitutes successful achievement of the SDGs in light of its national circumstances. Therefore Ireland has included a **2030 Vision** as part of the SDG National Implementation Plan 2018-2020, setting out an ambitious set of high-level commitments which address the 17 SDGs and taking account of the social, economic and environmental dimensions of the 2030 Agenda.

This 2030 Vision will be reviewed as part of the development of each new SDG Implementation Plan, to ensure that it remains challenging and ambitious in light of Ireland's ongoing development. A copy of the 2030 Vision is included in Annex II of this review.

Many of the measures through which Ireland will achieve the SDGs will take place within the context of **Project Ireland 2040**, which is the Government's overarching policy initiative to make Ireland a better country for all our people, a country that reflects the best of who we are and what we aspire to be. Project Ireland 2040 is made up of the **National Planning Framework to 2040 [NPF]** and the **National Development Plan 2018-2027 [NDP]**. Further details about Project Ireland 2040 are set out in Text Box 2.1 below.

The NDP is referenced in relation to several of the SDGs in Chapter 4 of this VNR. The NDP represents a new approach to public capital investment in Ireland. It is about reforming how public investment is planned and delivered. This will be achieved through a decisive shift to integrated regional investment plans, stronger coordination of sectoral strategies and more rigorous selection and appraisal of projects to secure value-for-money.

A new funding model for Exchequer funded public investment is being put in place to ensure that resources are allocated to projects and programmes that support the achievement of the objectives set out in the new NPF.

To this end, the NDP features a number of major new innovations in terms of how public capital investment is allocated by Government:

- ▶ It takes a long-term [10 year] strategic approach to investment, with funding allocations closely aligned with the 10 National Strategic Outcomes of the NPF.
- ▶ It provides for a sustained increase in public capital investment as a share of national income, to meet infrastructural needs.
- ▶ All Government Departments' capital programmes are now fully funded for a five-year period, which will facilitate Departments in planning their investment programmes over the medium term.
- ▶ Longer-term key Strategic Investment Priorities identified by Departments are funded beyond this five-year period, to their completion or to 2027 if funding for more than 10 years is involved.
- ▶ Four new Funds have been established, with a combined allocation of €4 billion, to be allocated on a competitive basis for projects which meet the criteria of the funds – targeting urban and rural renewal, climate action and 'disruptive technologies' respectively.
- ▶ The Plan provides for the establishment of a new National Regeneration and Development Agency, to maximise the potential use of under-utilised land banks in cities and towns.

Text box 2.1

Building Ireland's Future

Project Ireland 2040 is the Government's overarching policy initiative to make Ireland a better country for all our people, a country that reflects the best of who we are and what we aspire to be.

Project Ireland 2040 is informed by the Programme for a Partnership Government 2016, which recognises that economic and social progress go hand in hand, as well as by the **National Planning Framework to 2040** and the **National Development Plan 2018-2027**.

Project Ireland 2040 includes a set of social objectives and values that are also consistent with prudent economic decision-making and securing a high-quality environment. It prioritises the well-being of all of our people, wherever they live and whatever their background.

Well-being, equality and opportunity represent the core, interdependent themes of Project Ireland 2040. Without equality there cannot be well-being; without opportunity there cannot be equality.

The objective of Project Ireland 2040 is to provide a comprehensive social, economic and cultural infrastructure for all our people to flourish, so that together we can create a better society. A society in which every person counts, and in which all our people are served by the advances of science and technology – a creative and just society in which the human dimension is always paramount.

By 2040 an additional one million people are expected to be living in Ireland, and an additional two-thirds of a million people will work here. These are huge increases: more people will be travelling to work, school and universities, more buildings will be needed to accommodate them, clean water will be needed for homes, farms and industry, more and better care facilities will be required for the elderly.

An ageing population and smaller family size mean that Ireland will need an additional half a million homes to accommodate this growth. Without proper planning, growth will be haphazard and uneven. Without the required infrastructure, Ireland's potential for economic growth will stall.

Project Ireland 2040 seeks to achieve ten strategic outcomes, building around the overarching themes of well-being, equality and opportunity. These **ten shared priorities** will ensure a consistent approach between planning objectives under the National Planning Framework and investment commitments under the National Development Plan. They are:

1. **Compact Growth**
2. **Enhanced Regional Accessibility**
3. **Strengthened Rural Economies and Communities**
4. **Sustainable Mobility**
5. **A Strong Economy, supported by Enterprise, Innovation and Skills**
6. **High-Quality International Connectivity**
7. **Enhanced Amenity and Heritage**
8. **Transition to a Low Carbon and Climate Resilient Society**
9. **Sustainable Management of Water and other Environmental Resources**
10. **Access to Quality Childcare, Education and Health Services**

Supporting the SDGs Globally

Through development cooperation, Ireland has helped to shape the world over the past 50 years. We have contributed to the reduction of global poverty, and brought about transformative change in responding to crises, resolving conflicts and supporting transition to recovery. Ireland's history informs where we come from and what we do. From our experience of famine to our world-leading nutrition industry, from conflict to peace, from Irish culture and post-colonial experience, to Ireland's support for multilateralism as a small island state.

Our International Development Policy **One World One Future**, is central to delivering on our vision of a peaceful, sustainable, and just world, as articulated in Ireland's Foreign Policy for a Changing World **The Global Island**.

Anchored in our values, this vision is closely aligned to the 2030 Agenda. Designed to reduce poverty, hunger and humanitarian need our official programme for overseas development assistance aims to reduce hunger and build resilience; ensure inclusive and sustainable economic growth; and promote better governance, human rights and accountability.

Our international development work extends far beyond our financial contribution. Using our voice and influence, brokering institutional partnerships and supporting knowledge transfer are all part of our response to current global challenges. We are strongly committed to partnerships with countries and people most in need. We recognise the intrinsic link between our values to contribute to a more fair, just and sustainable world, and our shared prosperity and access to the benefits of sustainable and inclusive economic growth.

Around 70% of Irish development cooperation is delivered by Irish Aid, the Government of Ireland's international development programme with the balance managed by other Government Departments. Our funding is channelled through a range of partnerships

including civil society, multilateral institutions, and partner governments. Increasingly, our programme reflects the contribution of a broader range of Irish institutions and people from both the public and private sector.

Ireland has a reputation for delivering a high-quality, untied, focused and coherent international development cooperation programme. In 2014 the Brookings Institute rated Ireland's development cooperation programme as the outstanding aid programme among other international donors. Our bilateral aid programme is complemented by the provision of Official Development Assistance [ODA] through multilateral channels, including Multilateral Development Banks [MDBs].

The 2016 Programme for Partnership Government reiterated the Government's strong commitment to the International Development Cooperation programme, recognising the crucial importance of Ireland's ODA and humanitarian response. It stated that the Government would continue to make progress towards achieving the UN target of 0.7% of Gross National Income for ODA, as resources allow.

A new policy for international development will be produced in 2018. Our ambition will be to continue to lead and participate in collective global aspirations for a better world, as reflected in the SDGs. Our vision of this world is anchored in our values, working towards a world that is more equal, peaceful and sustainable. This new policy will focus on the protection of human rights, and of the people and of the natural world that we live in and depend on to achieve this vision. Within this, we will strive to fulfil the ambition set out in the SDGs 2030 Agenda of leaving no one behind.

By supporting long-term development and providing humanitarian assistance in over 80 countries, Ireland is helping to build better futures for some of the world's poorest people and communities by reducing vulnerability and increasing opportunity. Irish people, including many volunteers, are also making a unique contribution to the global SDGs, often working with partners to inspire new ways of thinking to ensure that no one is left behind. The knowledge and cultural exchange resulting from these experiences benefits not only our partner countries, but also Ireland and Irish people too.

Mainstreaming Gender Equality

Embedding gender equality in decision-making is one of six high-level objectives of the **National Strategy for Women and Girls 2017-2020**. Among a set of measures to support gender mainstreaming in national policy development and implementation, all Government Departments are required to consider the gender impact in the development of new strategies and the review of existing strategies and to ensure that the design and review of funding and grant schemes includes measures to ensure gender equality.

Governance Arrangements

Ireland has adopted robust governance arrangements in relation to the SDGs, in order to ensure that; the SDGs continue to **enjoy high levels of political engagement**; there is **clear assignment of responsibilities** for the SDGs across government; and **'whole-of-government' SDG coordination** is facilitated.

Overall political oversight for national SDG implementation is provided through the Cabinet, with each Government Minister having specific responsibility for implementing individual SDG targets related to their Ministerial functions. For this reason, each of the 169 SDG targets has been assigned to a lead Government Department. The choice to assign Ministerial responsibility for each target was taken to ensure that individual Departments take ownership of those SDGs most relevant to their work and to provide additional clarity to stakeholders.

The **Minister for Communications, Climate Action and Environment** has specific responsibility for promoting the SDGs, and for overseeing their coherent implementation across Government. The Minister was also responsible for preparing Ireland's SDG National Implementation Plan 2018-2020 and this Voluntary National Review. To carry out these tasks, the Minister established the **National Sustainable Development Unit** within his Department in 2017.

The **Minister for Foreign Affairs and Trade** is responsible for taking forward commitments, along with other relevant Departments, regarding foreign policy and international development as they relate to the SDGs.

To support these Ministerial functions, Ireland established structures at official level to facilitate implementation.

A **Senior Officials' Group [SOG] on the SDGs**, made up of Assistant Secretaries from all Government Departments, has been established to provide strategic coordination and to report, as required, to Cabinet. This Group is chaired by the **Department of the Taoiseach** [Prime Minister], with support from the National Sustainable Development Unit. It is assisted by an **SDG Interdepartmental Working Group [IDWG]**, again comprised of representatives from all Government Departments. The IDWG is responsible for developing national policy in relation to SDG implementation, preparing Ireland's VNRs and other SDG reports, and developing national arrangements of stakeholder engagement.

While Ireland's political and administrative systems are relatively centralised by international standards, **local government** has a crucial role to play in translating national policies into tangible practical actions that can help to deliver the SDGs at the local and community level. Increasing local government engagement with the SDGs is an important task during the lifetime of the SDG National Implementation Plan 2018-2020.

Stakeholder Engagement

Stakeholder engagement is an important part of policy development and implementation in Ireland and key stakeholders were consulted as part of the preparation of the SDG National Implementation Plan 2018-2020.

Ireland has established a **national SDG Stakeholder Forum** to inform further development of the national SDG framework and to provide a mechanism for key stakeholders to be engaged on an ongoing basis in national implementation of the Goals. The first meeting of the Forum was in June 2018.

The Forum comprises representatives from, among others, the NGO community and other civil society groups, the private sector, the trade union movement, the agricultural

sector, youth, academia, the education sector, Government Departments, and the Local Government sector. The Forum is convened and chaired by the Department of Communications, Climate Action and Environment.

The Forum is intended to provide a mechanism for all stakeholders to discuss national implementation and reporting processes, share examples of best practice in implementing the SDGs, discuss challenges to achieving the SDGs, and to be informed of SDG relevant events and processes taking place internationally.

While this knowledge exchange and dialogue within the Stakeholder Forum is extremely important, the Irish Government wants to go further in developing a partnership approach to implementing the SDGs. As a first step in this process, the Stakeholder Forum will be asked to develop proposals for raising public awareness of the SDGs and fostering public engagement with initiatives to achieve the Goals. This participative approach to stakeholder engagement draws on the experience of Ireland’s Corporate Social Responsibility [CSR] Forum. While the range of stakeholders will be significantly wider in relation to the SDGs, and this can be expected to present challenges to the “bedding in” of the new Forum, Ireland considers that enhancing stakeholder participation over the lifetime of the National Implementation Plan is a priority.

Figure 2.1 illustrates the proposed structure of the national SDG Stakeholder Forum

Figure 2.1: SDG Stakeholder Forum Sector Representatives

Communications Activities

As noted in Chapter 1, when last measured in 2017, the level of public awareness of the SDGs in Ireland stood at 36%. This is below the EU average of 41%, and Government considers this lack of national awareness regarding the Goals to be an impediment to their successful implementation.

Therefore, during the lifespan of the first SDG National Implementation Plan, a national SDG communications strategy will be developed. Work is also underway on the development of a national **SDG online platform** that can function as a 'one stop shop' for the public in relation to SDG information and learning. Following the establishment of the National Stakeholder Forum, Ireland will seek to select a number of national organisations, from across the multi-stakeholder network, to act as '**SDG Champions**'. These 'SDG Champions' will be asked to leverage their public profiles to raise awareness of the SDGs and draw on their own experiences to demonstrate the relevance of the SDGs to daily life in Ireland. The National Stakeholder Forum will be consulted as part of this process.

The Education Sector will also be a particular focus area for raising awareness of, and promoting engagement with the SDGs. The **National Strategy on Education for Sustainable Development 2014-2020** aims to ensure that education contributes to sustainable development by equipping learners with the relevant knowledge, skills and values [the 'why'] that will motivate and empower them throughout their lives to become informed active citizens who take action for a more sustainable future. The Strategy is currently undergoing a mid-term review, which will enhance the links between the Strategy and the SDGs.

The **Development Education Strategy 2017-2023** will also be a key enabler in this respect. Development education is a lifelong educational process which aims to increase public awareness and understanding of the rapidly changing, interdependent and unequal world in which we live.

Data and the Role of National Statistics Office

The **Central Statistics Office [CSO]** is Ireland's national statistical office and is tasked to impartially collect, analyse and make available statistics about Ireland's people, society and economy.

The identification and management of national data needed to meet Ireland's SDG reporting requirements will be undertaken by the CSO, in consultation with the SDG Interdepartmental Working Group.

In addition to Ireland's formal periodic SDG reporting, the CSO and Ireland's National Mapping Agency, Ordnance Survey Ireland [OSi], have launched a website for exploring, downloading and combining publicly available national SDG data using geographic information systems.

3. Methodology and process for preparation of the Voluntary National Review

Following the decision to submit a VNR to the 2018 session of the HLPF, sectoral inputs in relation to the 17 SDGs were provided by Government Departments through the SDG IDWG, and the draft structure of the VNR was approved by the SOG in early 2018.

The first draft of this VNR was prepared by the **National Sustainable Development Unit** in the **Department of Communications, Climate Action and Environment** during the course of Q1 2018. The draft VNR was then considered by the IDWG.

Following consideration by the IDWG, a Stakeholder Consultation Workshop was conducted in May 2018. The IDWG then considered a further draft of the VNR, in light of the feedback received through this stakeholder consultation. A high-level summary of feedback received through the Stakeholder Consultation Workshop is included in Annex III of this VNR.

At this stage the draft VNR was submitted to the SOG on the SDGs and then onward to Government for final approval.

In structuring the VNR, Ireland has utilised the VNR guidelines provided by UNDESA and considers these guidelines to be of particular use for countries taking part in the VNR process for the first time.

Ireland considers its preparation of this first VNR to have been a valuable exercise in relation to raising awareness of the SDGs across Government. While preparing the VNR shortly after the adoption of the first SDG National Implementation Plan was beneficial in terms of maintaining momentum and engagement across Government, the relatively short timeframe for the completion of both processes placed limitations on the scope for stakeholder consultation. In preparing its second VNR [scheduled for delivery at the 2022 session of the HLPF], Ireland will initiate the drafting process earlier in order to facilitate more wide-ranging consultation. This approach will also be reflected in the preparation of Ireland's periodic reporting at the national level. The establishment of the Stakeholder Forum will assist considerably in this regard.

Ireland will produce national reports on its implementation of the SDGs every two years, beginning in 2018. For those years in which Ireland has also committed to presenting a VNR to the HLPF, a single report will be presented at both the national and global level. Ireland's full SDG reporting schedule to 2030 is set out in Table 3.1 below.

Table 3.1: Ireland’s SDG Reporting Schedule 2018 - 2020

| Year | National Reports | VNRs at HLPF |
|------|-------------------------------------|--|
| 2018 | 1 st National SDG Report | 1 st Voluntary National Review delivered to the UN |
| 2020 | 2 nd National SDG Report | n/a |
| 2022 | 3 rd National SDG Report | 2 nd Voluntary National Review delivered to the UN |
| 2024 | 4 th National SDG Report | n/a |
| 2026 | 5 th National SDG Report | 3 rd Voluntary National Review delivered to the UN |
| 2028 | 6 th National SDG Report | n/a |
| 2030 | 7 th National SDG Report | 4 th Voluntary National Review delivered to the UN* |

*Depending on the modalities of the HLPF in 2030, the presentation of Ireland’s 4th VNR may be switched to 2029.

The statistical annex accompanying this VNR is based on data provided to the National Sustainable Development Unit by the CSO, using the EU SDG indicator set. The choice of the EU SDG indicator set is discussed further in the introduction to the statistical annex. While these EU indicators are used as the official measure of progress in this VNR, in order to provide for a more comprehensive overview of conditions in Ireland in 2017, reference is also made to OECD and national indicators as appropriate when discussing the 17 SDGs in Chapter 4.

4. Goals and Targets

Goal 1: No Poverty

Rates of poverty in Ireland can be measured using a number of distinct metrics at both the national and EU level. Looking first at the EU poverty indicators the percentage of **people at risk of poverty or social exclusion in Ireland was above the EU average in 2015 at 26%** [and in 2016 at 24.2%] but has declined steadily from its recent peak during the recession in 2012. The percentage of **people at risk of income poverty after social transfers** in Ireland in 2015 was marginally below the EU average [and remained so in 2016]. The percentage of **severely materially deprived people** in Ireland in 2015, at 7.5%, was below the EU average [and remained so in 2016 when the Irish rate fell to 6.5%], and this percentage has also been reducing since the most recent peak in 2013. The percentage of **people living in households with very low work intensity** was the highest in the EU in 2015 but has again been decreasing steadily from its recessionary peak in 2011. The **housing cost overburden rate** in Ireland was significantly below the EU average in 2015 and the percentage of the Irish **population living in a dwelling with a leaking roof, damp walls, floors or foundation, or rot in window frames or floor** was also below the EU average. It should be noted that in relation to housing related EU SDG indicators, the data does not appear to capture the significant issues related to pressure on housing supply and homelessness currently experienced in Ireland. These issues are discussed in detail under SDG 11.

At the national level, poverty data in Ireland is collected by the CSO using the Survey on Income and Living Conditions [SILC] which is conducted annually. The measures most commonly used by the CSO to calculate the number of people in poverty in Ireland are **at-risk-of poverty, material deprivation and consistent poverty**.

At-risk-of-poverty is a measure of relative poverty or income poverty. It is measured by setting a relative income poverty line, in Ireland, at-risk-of-poverty is measured by calculating the median income and setting the line at 60% of the median.

Material deprivation takes account of access to resources other than income, through the mechanism of a deprivation index of items and activities that are generally taken to be the norm in a particular society. In Ireland, 11 basic items are used to construct the deprivation index, and individuals who experience two or more of the eleven listed items are considered to be experiencing enforced deprivation.

Consistent poverty looks at those persons who are defined as being at risk of poverty and experiencing enforced deprivation

Using these national metrics, the most recent available data [for 2016] indicates that the at risk of poverty rate in Ireland is 16.5%, the rate of material deprivation is 21.0% and the consistent poverty rate is 8.3%. The social impact of the post downturn saw both the rate of material deprivation and consistent poverty rise significantly and then fall as the economy recovered. The material deprivation rate rose from 17.1% in 2009 to a peak of 30.5% in 2013, and has consistently fallen since then to its current rate of 21.0%. Similarly, consistent poverty peaked at 9.1% in 2013.

It should be noted that all the indicators referenced above rely on 2016 data at the latest, which does not take account of the continuing economic recovery and employment growth measures throughout 2017 and 2018. Therefore it can be expected the figures for those years, when they become available, will show some further improvement.

Ireland has a comprehensive social protection system providing support for individuals and families across the various stages of the life-cycle, and addressing contingencies such as unemployment, disability, and the assumption of caring responsibilities [SDG 1.3]. The poverty reduction effect of social transfers in Ireland remains strong. In 2015, social transfers [excluding pensions] reduced the at-risk-of-poverty rate from 34.9% to 16.9% [by 18 percentage points in absolute terms]. This represents a poverty reduction effect of 51.6%, amongst the best in the EU.

Ireland has had national poverty reduction targets in place since 1997. The **National Action Plan for Social Inclusion 2007-2016 [NAPinclusion]** is a wide-ranging and comprehensive programme of action to address poverty and social exclusion. It adopted a new strategic framework to facilitate greater coordination across Government Departments at local and national levels. It was based on a lifecycle stage approach with goals set for each group: children; people of working age; older people and people with disabilities; and communities. The Plan included a wide range of specific actions to be taken by various Government Departments, including targets for the levels of social welfare payments. It was updated for the period 2015-2017, with a greater focus on modernising the social protection system, improving effectiveness and efficiency of social transfers and strengthening active inclusion policies.

A key element of NAPinclusion is the **national social target for poverty reduction [NSTPR] [SDG 1.2]**, which sets out the Government's ambition for reducing and ultimately eliminating poverty. The headline target was to reduce consistent poverty to 4% by 2016 [interim target] and to two% or less by 2020, from the 2010 baseline rate of 6.3%. In addition, there are sub-targets in relation to children and for Ireland's contribution to the Europe 2020 poverty target. However, the social impact of the economic downturn meant that the consistent poverty figure rose over the period 2010-2013. Given that the 2016 data showed that consistent poverty [while improving year-on-year] stood at 8.3%, this means that 2016 interim target of 4% has not been met.

The successor to the current NAPinclusion is being developed at present. It is proposed that the new plan will be for the 4 year period 2018-2021, consistent with that of the Europe 2020 Strategy. It is also expected that poverty data for 2020 will be available from the CSO SILC in late 2021. This will allow any future strategy to be informed by progress towards the national poverty targets at that time. The primary focus of the plan will be the reduction of consistent poverty: improved/supported incomes to reduce the percentage of the population at-risk-of-poverty [below 60% of the median income] and increased access to quality services to reduce the percentage of the population experiencing deprivation [deprived of two or more of the 11 basic deprivation items] and reduce the risk of poverty development [intergenerational poverty].

At the time of the adoption of NAPinclusion in 2007, a target floor was set – that the value of the lowest social welfare payment would be maintained at least at €185.80 per week, in 2007 terms, over the course of the Plan, subject to available resources. As a result of the extent of the fiscal correction after 2009, this target was narrowly missed in some years – by 2014, the real value of the relevant payment was 3% below the 2007 level. However, it has been possible to restore this reduction in recent Budgets, and the real value of the payment in 2018 will be above the 2007 level. The setting of targets for future development in the real value of welfare payments will be considered in the context of the successor plan to NAPinclusion.

The proportion of young people not in employment, education or training in Ireland was close to the EU average of about 11% prior to the recession. By 2011, however, about 19% of the young adult population was in this situation, compared with 13% in the EU. To date [by 2017] the recovery has seen the Irish figure fall to 10.9%, identical to the EU figure for that year.

Supporting the SDGs Globally

Ireland is well recognised internationally for its commitment to the reduction of poverty and vulnerability, and our focus on least developed countries and those most in need. Our current international development policy **One World One Future** commits us to target those most excluded, demanding a greater focus on the dynamics of power and exclusion that underlie poverty and inequality.

Ireland uses its position in global fora including at the EU and UN to advance its priority focus on using ODA for countries and people most in need, targeting women and marginalised groups in particular. We strongly believe that addressing the underlying structural causes and the multi-dimensional nature of poverty will provide a stronger foundation for sustainable development.

Sub-Saharan Africa remains the priority region for Ireland’s bilateral aid programme where we target programme areas with the potential to have the greatest impact on poor people’s lives. Our contribution to reducing the proportion of the world’s population below the international poverty line has been achieved through programmes supporting access to quality essential services, building resilience of poor communities, targeting women and marginalised groups, supporting civil society space and democratic processes, as well as through increasing investment in social protection and inclusive economic growth. In addition, Ireland has contributed to improved disaggregation of data on poverty reduction. For example, Ireland supports Paris 21, a partnership for statistics for development, which was founded by the UN, the European Commission and the OECD [SDG 1.1].

Ireland works in partnership with governments and civil society organisations to achieve national poverty reduction targets both at national and sub-national levels. Through this approach, Ireland has made a contribution to substantial reductions in the proportion of people living below the poverty line, particularly in our seven key partner countries in Sub-Saharan Africa¹. Ireland also supports national statistics organisations and key statistical surveys such as the most recent Demographic Health Survey in Ethiopia. In particular, we are working with international and national stakeholders towards better availability of sex-disaggregated data [SDG 1.2].

Ireland's support to nationally appropriate social protection systems is evidenced through direct engagement in six of its eight key partner countries. Ireland supports partner governments to put in place social protection programmes for their most vulnerable citizens, and in 2017 was the largest contributor to the International Labour Organisation's social protection flagship programme [SDG 1.3].

Ireland supports the work of the International Land Coalition to build the capacity of local and national civil society organisations to effectively lobby for equality in land governance and tenure. Some impact is evident within Irish Aid partner countries; for example, four new land bills were recently introduced in Malawi [SDG 1.4].

Every year hundreds of millions of people are affected by disasters and emergencies. It is the women and men, girls and boys living in the poorest countries who are the worst affected and least able to recover. In response, Ireland acts quickly to save lives, alleviate suffering and help maintain human dignity during and in the aftermath of humanitarian crises. We support efforts to plan ahead, predict and intervene before a situation deteriorates to crisis point by investing in disaster risk reduction programmes to diminish the effects of persistent food shortages, and to prevent widespread famine while working to address the root causes of vulnerability in regions and countries particularly vulnerable to chronic food and nutrition insecurity [SDG 1.5].

1 Ethiopia, Malawi, Mozambique, Sierra Leone, Tanzania, Uganda, Zambia. Vietnam is also a key partner country. In addition, Ireland has a sizeable development cooperation programme in Lesotho, Liberia, South Africa and Zimbabwe.

Textbox 4.1

Case Study: Malawi

Increasing Access to Social Protection in Balaka, Malawi.

Balaka is a very vulnerable district in Malawi; it has one of the country's highest rates of HIV infection, it is a drought prone area, and, in the last two years, crops have failed. The Government's Social Cash Transfer programme supported by Irish Aid and other partners provides regular support to the most vulnerable households in the district, including the elderly and homes caring for orphans.

The women in Balaka [pictured] discussed the challenges that they are facing in their community and high on the list was the food shortages. As their income from crops has been damaged, many are now depending on the social cash transfer programme. The predictability and regularity of the transfers allows women to plan and invest, helping them avoid having to sell their limited assets and to build their resilience.

"The [cash] transfers have allowed us to meet our day to day needs and in some months to make some savings. Through the Village Savings and Loan scheme, we are now able to save and borrow money easily and we in turn invest that money in small businesses," said Mirriam Wilson.

"With the transfers we at times are able to buy meat and cooking oil, thereby contributing towards our nutritional well-being". Odeta Lafaello was happy to say that the social cash transfer has improved her life: "As long as I am able to send my children to school I am very grateful."

Goal 2: Zero Hunger

Agriculture is Ireland's largest indigenous sector, and eradicating hunger and malnutrition are longstanding priorities of our development cooperation programme. As such, Ireland's engagement with SDG 2 is high both domestically and internationally.

In 2016, Ireland had the **highest level of Government support to agricultural research and development per capita within the EU**. In relation to the environmental impacts of agriculture, Ireland's **gross nitrogen balance on agricultural land was below the EU average** [based on 2013 data] which also has positive impact on nitrate levels in groundwater [see SDG 6]. **Ammonia emissions** from Irish agriculture [measure in kg per hectare] are marginally above the EU average. Ireland **had the second lowest percentage of land under organic farming** among EU Member States. In 2016, Irish farming incomes, measured by way of **agricultural factor income per annual work unit [AWU]** were above the EU average.

In common with other EU Member States, malnutrition in Ireland is primarily associated with overnutrition as opposed to undernutrition. **Obesity rates** in Ireland are above the EU average based on 2014 data. Childhood obesity rates are not included in the EU SDG indicator set. National data published in 2017 indicates that childhood overweight and obesity rates are stabilising in Ireland, but at a high level of approximately 20%.

The **Healthy Ireland Survey** and the **Childhood Obesity Surveillance Initiative [COSI]** both measure obesity rates in Ireland. Ireland's national response to overnutrition and obesity is set out in **A Healthy Weight for Ireland – Obesity Policy and Action Plan 2016-2025 [SDG 2.2]**. This Plan sets a target for the prevalence of obesity in Ireland over the plan's lifetime, specific short term [five-year] targets are included in the plan, and progress will be measured every two years. A whole-of-Government **Strategy for Young Children [0-5]** and their families, to be published in 2018, will also support SDG 2.2.

While less nationally prevalent than obesity, food poverty is also experienced in Ireland, with 9.2% of the population experiencing food poverty in 2016. For children under five years of age in 2016, some 10.2% experienced food poverty in 2016. This rate was higher in lone parent families with children at 23.5%.

Published in 2015, **Food Wise 2025** sets out a ten year plan for the agri-food sector. And includes an ambitious set of projections to be achieved under the lifetime of the Plan, including:

- ▶ 85% increase in exports to €19 billion;
- ▶ 70% increase in value added to €13 billion;
- ▶ 60% increase in primary production to €10 billion; and
- ▶ The creation of 23,000 additional jobs all along the supply chain from producer level to high end value added product development.

At the same time, Food Wise 2025 recognises that a significant increase in food production cannot be considered in isolation from its environmental impact, in particular regarding concerns associated with the depletion of natural resources and the potential impact on climate change. To address this, future food production systems must be as focused on managing and sustaining Ireland's natural resources as they are on increasing production. This approach is summed up as *Environmental protection and economic competitiveness are equal and complementary: one will not be achieved at the expense of the other* [SDG 2.3]. Improving the environmental impact of agriculture is also addressed through the **National Biodiversity Action Plan 2017-2021** and the **Rural Development Plan 2014-2020**.

Ireland has adopted **National Genetic Conservations Strategies** for both plants and animals [SDG 2.5], and both the **National Biodiversity Action Plan 2017-2021** and the **Rural Development Plan 2014-2020** support these strategies by, respectively, conserving and restoring biodiversity and ecosystem services in the wider countryside and encouraging conservation and sustainable use of genetic resources associated with food and agriculture.

Supporting the SDGs Globally

The eradication of hunger and under-nutrition has long been a cornerstone of Ireland's international development cooperation programme. Ireland recognises the central role of nutrition in achieving sustainable development and that improvements in nutrition are necessary for progress on global health, education, poverty, female empowerment, and inequality. Simultaneously, poverty and inequality, water, sanitation and hygiene, education, food systems, climate change, social protection, and agriculture all have an important impact on nutrition outcomes.

Ireland is a founding supporter of the Scaling Up Nutrition [SUN] Movement which focuses on maternal, infant and child nutrition, and increasing political will and investment to address under-nutrition in early childhood. In addition to directing resources to child wasting and child stunting, we also focus on micro-nutrients through a comprehensive range of approaches to fortification.

In line with the multi-sector/multi-stakeholder approach that SUN embodies, Irish Aid addresses hunger and under-nutrition across other priorities of humanitarian and development funding, supporting Irish Aid's continued delivery against the commitment made by the Taoiseach to double our nutrition-relevant spend by 2020. In addition, the unprecedented level and duration of humanitarian crises is demanding a renewed focus on the need to improve linkages between humanitarian and development work. We are examining the central role of nutrition in resilience, including the links between stunting and wasting and the resultant policy and programming implications. Ireland is also working to leverage private sector engagement on nutrition, as a critical piece of the multi-stakeholder approach and a contribution to sustained eradication of hunger and malnutrition [SDG 2.1/2].

On agriculture, Ireland is focused on the role of smallholders, particular women, within sustainable food systems. We support research and learning on nutrition sensitive and climate resilient agricultural technologies and techniques. Regarding our engagement with global partners, while on the Executive Board of the International Fund for Agriculture Development in 2017 [IFAD], Ireland was active in ensuring that the revision of IFAD's Performance Based Allocation System [PISA] delivered increasing resources, in the form of grants and loans, to low-income and fragile countries [SDG 2.3].

Ireland is a founding member of the Agriculture Markets Development Trust in Tanzania which focuses on increasing incomes and employment opportunities for poor women, men, and young people in agricultural value chains. The Trust works with the private sector, government and civil society organisations to promote changes to market systems leading to broad, sustained impact on the lives of poor smallholder farmers. With a focus on maize, sunflower and pulses it has helped deliver improved access to markets and better prices for produce for smallholder farmers. Additionally, in 2017, Ireland launched the Ireland-Kenya Agri-Food Strategy [2017-2021] which seeks to strengthen support for the Kenyan Agri-food sector and expand opportunities for Irish Agri-food and Agri-business companies to invest in Kenya. A primary goal of the Strategy is to increase agricultural output and family incomes in Kenya [SDG 2.3].

Ireland is investing in a number of programmes seeking to promote and expand sustainable agricultural practices in our Partner Countries. In Malawi, Ireland is supporting a multi-donor World Bank programme focusing on the expansion of Conservation Agriculture to strengthen the natural resource base in agricultural lands. Similar projects are also being supported in Ethiopia and Zambia, working with various Consortium of International Agricultural Research Centers [CGIAR] centres and local civil society, to integrate agroforestry practices within farming systems for greater climate resilience [SDG 2.4].

Also in Malawi, and in partnership with the International Crops Research Institute for the Semi-Arid Tropics [ICRISAT], Ireland is making significant progress in developing the availability of quality legume seeds across the country. This partnership brings together key government, civil society, and private sector actors under a national legume platform to advance the production of legumes such as groundnut, pigeon-pea chickpea and other nutritious crops, delivering both economic and nutritional impacts. Similar progress has been made in partnership with International Potato Research Institute [CIP] advancing the production and consumption of Irish and Orange Fleshed Sweet Potato. In Ethiopia, Ireland is working in partnership with the Agriculture Transformation Agency to expand community-based seed production initiatives in several regions focusing on improved seeds that are high-producing and resistant to pests and diseases [SDG 2.5].

Ireland currently is a member of the World Food Programme Executive board and will focus on nutrition as one of its main themes for the duration of its membership. In 2017 Ireland provided extra budgetary funding to the Food and Agricultural Organisation of the UN to achieve better production capacity and enhanced resilience for returning internally displaced persons in northeast Nigeria; for the improvement of food and nutrition security of the communities affected by the crisis in the Central African Republic; and for the sustainable management of Fall Armyworm [FAW] which poses a serious threat to food security for small holder farmers heavily reliant on crops most vulnerable to FAW attacks.

Goal 3: Ensure healthy lives and promote well-being for all at all ages

EU indicators for this Goal suggest that Ireland is making good progress under SGG 3.

In 2015, **life expectancy at birth** for females and males was marginally above the EU average. In terms of **self-perceived health**, in 2015 Ireland had the highest proportion of population who rated their health status as good or very good among EU Member States, and the proportion who rated their health as bad or very bad was below the EU average. Ireland's overall level of **smoking prevalence** was below the EU average in 2014, with almost 80% of the population classified as non-smokers by Eurostat. Within the overall level of smoking prevalence, the level of occasional smokers in Ireland was above the EU average. Ireland's **death rate due to chronic diseases** was below the EU average in 2015 for both females and males. **Suicide rates** in 2015 were also below the EU average in Ireland, again for both females and males. **Self-reported unmet need for medical care** in Ireland was below the EU average in 2015. However, while the Irish rate continued to decrease in 2016, it was above the EU average in that year. In addition, it should be noted that the rate increased during the economic downturn beginning in 2008 and while it has subsequently decreased steadily each year since 2013, it remains above the 2008 level.

This EU data can be supplemented by OECD information. According to the OECD Health at a Glance 2017, Ireland also has the highest proportion of the population who rated their health status as good or very good among EU OECD members. This is also the case for people with the highest income level but not for people in the lowest income level who are rated fifth highest on this measure. Ireland's life expectancy in 2015 was 81.5 years which is above the OECD average of 80.6 years. This represents an improvement of over 10 years since 1970. The overall age standardised mortality in Ireland is similar to the OECD average. The rate is lower in Ireland than the OECD average for circulatory system diseases and above the OECD average for cancer related diseases. Infant mortality in Ireland is below the OECD average.

In common with other advanced economies, health and social care services continue to face demographic pressures and a rising burden of chronic disease. The overall population has been rising steadily in the last decade and is projected to increase by 4.9% by 2021. The population is also ageing resulting in greater care requirements. Projections suggest that between 2011 and 2021, the population aged 65 and over will increase by 38%, while the number of people aged over 85 years is currently increasing by approximately 3.3% each year.

Coupled with these demographic pressures, the changing nature and complexity of care required is placing further pressures on the system. An ageing population and lifestyle factors are contributing to a sharp increase in the prevalence of chronic disease with multiple morbidities. Approximately 38% of Irish people over 50 years have one chronic disease and 11% have more than one. Chronic disease accounts for 80% of all primary care physician visits, 40% of hospital admissions, and 75% of hospital bed days.

In order to deal with the increasing burden of chronic disease in a sustainable manner there is a concerted effort to reduce the causative risk factors and to develop a model of care which is more integrated and continuous, person-centred, and delivered at the lowest level of complexity consistent with patient safety.

A key priority for Government is to constantly improve the health and well-being of people in Ireland: by keeping people healthy; providing the healthcare people need; delivering high-quality services and getting best value from health system resources.

Healthy Ireland [2013-2025] [SDG 3.3 and SDG 3.4] is the national framework for action to improve the health and well-being of the people of Ireland. Prevention, early intervention and empowering people to look after their own health and well-being are essential elements of our Healthy Ireland strategy. Healthy Ireland takes a whole-of-Government and whole-of-society approach to improving health and well-being and the quality of people's lives. This is particularly important in tackling the rise of chronic disease in Ireland, addressing health inequalities and mental health issues.

Significant progress has been made in recent years in promoting population health and tackling a variety of public health challenges. The policy direction on these major challenges is now largely set out in published plans and policies including: **Creating A Better Future Together: National Maternity Strategy 2016-2026 [SDG 3.1. and SDG 3.2]**, **Tobacco Free Ireland [SDG 3.A]**, **National Suicide Strategy [SDG 3.4]**, **Obesity Policy and Action Plan [SDG 2.2 and SDG 3.4]**, **National Physical Activity Plan**, **National Sexual Health Strategy [SDG 3.3., SDG 3.7 and SDG 5.6]**, **National Substance Misuse Strategy [SDG 3.5]**, **National Positive Ageing Strategy**, **Reducing Harm, Supporting Recovery – a health led response to drug and alcohol use in Ireland [SDG 3.5]**.

The implementation of these policies under the Healthy Ireland Framework is having a positive impact. Daily smoking rates in Ireland among adults is close to the OECD average, with 19% of adults being daily smokers compared with an OECD average of 18%. There has been a significant decrease in Ireland in daily smoking rates since 2000. There has been a decrease of more than 60% of the rate of regular smoking children aged 15 since 1997-98, now at 8% compared with the OECD average of 11.7%.

Ireland was among several countries in the OECD to experience large reductions in alcohol consumption between 2000 and 2015, dropping from 14.2 litres per capita aged 15+ to 10.9 litres. This is still high however compared with the OECD average of 9 litres. 16% of children aged 15 in Ireland have reported being drunk at least twice in their life. This compares favourably with the OECD average of 22.3%.

Almost 73% of adults perform at least 150 minutes of moderate physical activity weekly in Ireland compared with 66.5% across OECD countries. 37% of Irish adults were measured as being overweight in 2015 with a further 23% classed as obese. Of the 18 OECD countries with measured data, the average for overweight was 34% and for obese was 23%.

People in Ireland were close to three times more likely to report depression than people in countries with the lowest prevalence. This difference is in part driven by different attitudes and understandings around mental ill-health and depression. Lower stigma around depression may contribute to higher rates of self-reported illness, and higher rates of diagnosis. As with other countries, women had a higher prevalence of self-reported chronic depression than men. The suicide rate in Ireland was 10.9 per 100,000 population which was lower than the OECD average of 12.1. As with all other countries, men had a significantly higher rate of suicide than women.

In addition other key national strategies recently published also include an Healthy Ireland approach: **Better Outcomes, Brighter Futures: the National Policy Framework for Children and Young People [SDG 3.2]**, **National Strategy for Women and Girls [SDG 5]**, and **the National Cancer Strategy [SDG 3.4]**.

Our national focus will now increasingly shift to driving, monitoring and evaluating the implementation of the policies outlined above. This will include initiatives in local authorities, workplaces, educational facilities and communities. Work will continue on developing further measures to limit the harm from alcohol, and to strengthen our tobacco control measures in line with the World Health Organisation [WHO] Framework Convention on Tobacco Control. In addition, a health and well-being approach will inform and support the development of new strategies in areas such as mental health.

In the mental health arena, **Vision for Change [2006-2016] [SDG 3.4]** was the policy document that saw major advances in the shift from institutional to community based care for those requiring mental care. The policy is now open for review and as part of the process a new Joint Committee on the Future of Mental Health Care has been established with a view to achieving agreement on the implementation of a single, long-term vision for mental health care and the direction of mental health policy in Ireland.

Food safety and hygiene standards are also essential for our health and well-being. Consumers must be provided with information to help them make informed choices about the food they intend to purchase e.g. nutritional information. We will continue to work with stakeholders to progress legislation and policies that support these objectives.

Ireland continues to develop policy and suitable legislative frameworks to support public health protection through: control of infectious diseases; national immunisation, vaccination and cancer screening programmes; appropriate national public health emergency planning [including pandemic influenza and implementation of the International Health regulations]; contributing to EU and WHO health protection policy development; and monitoring the implementation of all such policy and legislation.

As part of the process in developing a model of care which is more integrated and continuous, person-centred, and delivered at the lowest level of complexity consistent with patient safety, a parliamentary cross-party Committee on the Future of Healthcare sat for twelve months [2016-2017] with the objective 'to consider how best to ensure that, in future, everyone has access to an affordable, universal, single-tier healthcare system, in which patients are treated promptly on the basis of need, rather than ability to pay' [SDG 3.8]. The resulting **Sláintecare Report** which was published in May 2017 lays out a high-level vision and strategy for reform of the Irish health system over a ten year period.

A government response to the Sláintecare report and detailed implementation plan for the strategy is being developed.

At the 2017 Global Forum on Human Resources for Health in Dublin, a **National Strategic Framework for Health and Social Care Workforce Planning** was launched by the Minister for Health. The Framework aims to support the recruitment and retention of the right mix of workers across the health and social care system to meet planned and projected service need. One of the principles underpinning the Framework is that workforce planning solutions should be consistent with the articles of the WHO Global Code of Practice on the International Recruitment of Health Personnel.

Other important cross-sectoral policies in relation to Goal 3 include the **Road Safety Strategy 2013-2020 [SDG 3.8]** and the **first National Clean Air Strategy** [currently under development] [SDG 3.9].

Ireland is also committed to meeting **SDG 3.9** as it relates to chemicals through the framework of EU regulations including the **REACH, CLP, Detergents and Export-Import Regulations** as well as the **Seveso III Directive**, all of which contributes to the overall sound management of chemicals. In relation to the **REACH Regulation**, Ireland contributes to the reduction in use of particular hazardous chemicals [SVHCs – substance of very high concern such as carcinogens or those that are persistent in the environment] through our engagement in Substance Evaluation as well as Risk management tasks under the SVHC 2020 Roadmap. In the workplace, the **Health and Safety Authority** focuses its efforts on REACH in particular on substances that have a direct effect on human health and target our efforts at identifying and risk managing substances that are CMRs [carcinogens, mutagens and toxic to reproduction as well as respiratory sensitisers].

In relation to road safety, 2017 was the safest year on Ireland's roads since road deaths were first recorded in 1959. 2017 saw a 15% drop in road deaths compared to 2016. A total of 158 people lost their lives on Ireland's roads in the year to 31 December 2017.

Ireland's forthcoming National Clean Air Strategy will include a thematic focus on the impact of air quality on health. As of 2014, Ireland enjoyed the second lowest exposure to air pollution by particulate matter [PM2.5] of all EU Member States.

Access to quality health services is also one of the 10 strategic outcome to be achieved under Ireland's National Development Plan [published in January 2018] **Project Ireland 2040**.

Supporting the SDGs Globally

Supporting better health for all is a core ambition of Ireland's policy for International Development. Ireland continues to invest to improve access to quality health services, and attain quality health outcomes for poor and marginalised citizens. As a supporter of the Universal Health Coverage [UHC] 2030 movement led by the WHO and World Bank, Ireland supports collective action to build health systems that can deliver quality health services to all who need them as illustrated in Figure 4.1. [SDG 3.8]. Equity of access is a fundamental priority for Ireland in order to address barriers to access and protect human rights to achieve SDG 3 and other Goals.

Figure 4.1: Collective Action to Build Universal Health Coverage

To improve both the quality of healthcare and access to services, Ireland also continues to prioritise human resources for health, working in partnership with the Irish Health Service Executive [HSE] and the Department of Health. At the 2017 Global Forum on Human Resources for Health, Ireland led global efforts to highlight the importance of substantially increasing health financing and the recruitment, development, training and retention of health workforce in developing countries. We now continue our efforts to respond to the 2017 Dublin Declaration, which calls for equitable access to health workers within strengthened health systems especially in rural and under-served areas [SDG 3C].

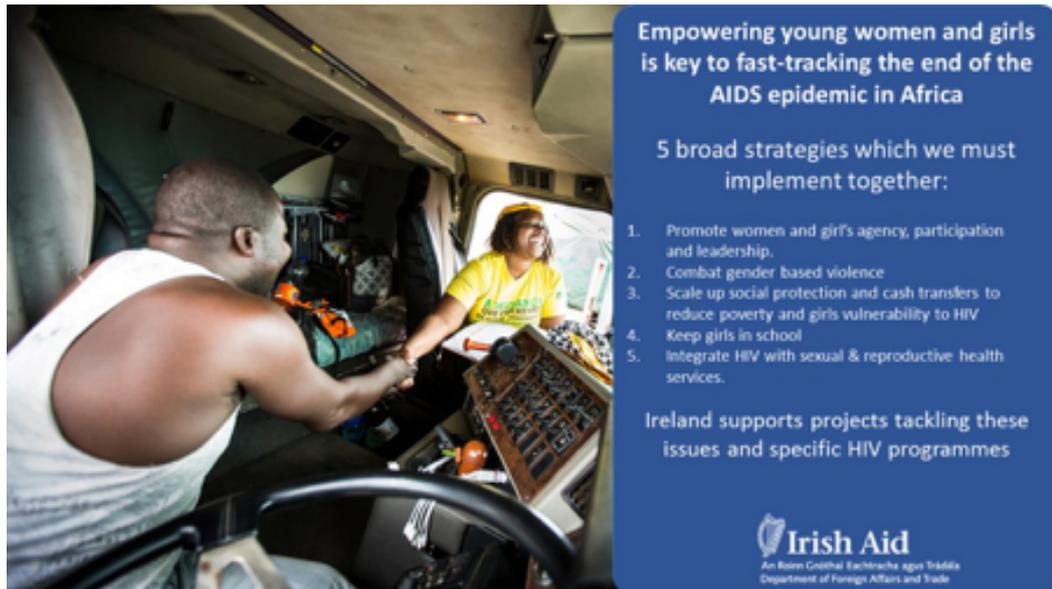

Ireland also continues to strengthen its focus on the intersection between health and gender with a particular focus on reducing the rate of maternal mortality, where the global annual reduction rate will need to triple to achieve the SDG target 3.1. Consistent with the ‘Cairo Programme of Action’, Ireland will support efforts that reduce maternal and infant mortality, and promote universal access to reproductive healthcare, including ante-natal care and family planning services [SDG 3.1, 3.7, 3.8].

Working in line with the *Every Woman Every Child* global movement that mobilises and intensifies international and national action, Ireland works with governments, multilaterals, the private sector and civil society to address the major health challenges facing women, children and adolescents around the world. Reducing child mortality also remains a major priority as one child in twelve still dies before their fifth birthday in Sub-Saharan Africa. Through partnership with the Gavi vaccine alliance, Ireland works with UN agencies and civil society to support routine immunisation, which has already prevented 9 million deaths [SDG 3.2, 3.8].

HIV and AIDS remains the leading cause of death in adolescents aged 10-19 years in Sub-Saharan Africa. Working closely with UNAIDS and as a founding member of the Global Fund to fight AIDS, TB and Malaria, Ireland actively supports the SDG ambition to end the

AIDS, TB and Malaria epidemics by 2030. The Global Fund mobilises and invests nearly US\$4 billion a year to support programmes in over 100 countries to support communities most in need, including in all Irish Aid partner countries. To date, it has saved 22 million lives and supports 11 million people on antiretroviral therapy for HIV – more than half the global total [SDG 3.3].

Figure 4.2: Irish Aid Measures to Tackle AIDS in Africa

Building on the international reputation of our work on HIV and AIDS, we continue to invest in effective prevention by addressing inequality, gender-based violence and targeting of key and vulnerable populations, including adolescent girls and young women. Protecting young adolescent girls, who are particularly vulnerable to HIV infection, is also a top priority as 90% of new infections are among this age group. Ireland works with United Nations Educational, Scientific and Cultural Organisation [UNESCO] and UNAIDS to increase the provision of comprehensive sexuality education in Sub-Saharan Africa to improve knowledge and reduce high-risk behaviour [SDG 3.1].

As the 2014 Ebola epidemic in West Africa clearly showed, working with communities is essential to achieve better health and through multiple NGO-led initiatives [SDG 3.3, 3.7]. Ireland actively supports work within communities to promote health locally, while also promoting better WHO coordination at global level to respond to national and global health risks [SDG 3D].

Goal 4: Quality Education

Based on EU indicators, Ireland performs strongly in relation to education and skills under this Goal. The **rate of early leavers from education and training** in Ireland was below the EU average in 2016 [as a % of the population aged 18-24 years old] and had decreased significantly since 2011. **Participation in early childhood education** was above the EU average for Irish children in 2015 and approaching 100%. Regarding **underachievement in reading, maths and science**, in 2015 Ireland had the third best outcomes among EU Member States. Additionally, in 2016 Ireland had the fourth highest EU **level of tertiary educational attainment** as a percentage of population aged 30 to 34. Irish **employment rates for recent graduates** [as a percentage of population aged 20 to 34] were only marginally above the EU average in 2016 but it should be noted that 2016 data does not take account of the continuing economic recovery and employment growth measures throughout 2017 and 2018. Therefore it can be expected the figures for those years, when they become available, will show some further improvement. Rates of **adult participation in learning** in Ireland in 2015 were below the EU average.

Consideration of the OECD Better Life Index also supports the view that Ireland is performing well under SDG4. On average, people living in Ireland can expect to go through **18.7 years of education between the ages of 5 and 39**, more than the OECD average of 17 years, and **80% of adults aged 25-64 have completed upper secondary education**, higher than the OECD average of 74%. OECD indicators also reflect positively on the quality of education provided in Ireland, with the **average student in Ireland scoring 509 in reading literacy, maths and sciences** in the 2015 Programme for International Student Assessment reviews, above the OECD average of 486. In terms of social and gender inequality regarding education, Ireland also ranks highly compared to its OECD peers.

Education is compulsory for children in Ireland from the ages of six to sixteen or until students have completed three years of second-level education. State-funded education is available at all levels [**SDG 4.1, SDG 4.3**].

While the compulsory school age in Ireland is six and all forms of pre-primary education are optional, children from the age of four can be enrolled in infant classes in primary schools. Nearly 40% of four-year-olds and virtually all five-year-olds attend primary school, where early education is provided in infant classes. The free pre-school scheme was introduced in January 2010. Under the original terms of the scheme, all children aged between three years two months and four years seven months in September were entitled to one year of free pre-school education in the year prior to starting primary school. In 2016, the terms of scheme were extended to allow children to enrol in free pre-school from the age of three years of age and to remain there until they start primary school. While participation is voluntary, 95% of eligible children availed of the scheme in 2016/2017. From September 2018, the scheme will be extended further. From this date, all children will be entitled to two full years of free pre-school education [**SDG 4.2**].

The Action Plan for Education 2016-2019 set out the goal that the Irish Education and Training System should become the best in Europe within 10 years, which while challenging is achievable given our strong starting position. The publication of the Action Plan was the beginning of an annual process. More detailed actions, with quarterly delivery dates, are identified in updated annual plans.

These plans are based on the original five high-level goals:

1. Improve the learning experience and the success of learners
2. Improve the progress of learners at risk of educational disadvantage or learners with special educational needs
3. Help those delivering education services to continually improve
4. Build stronger bridges between education and the wider community
5. Improve national planning and support services

Progress is monitored through the publication of End of Year Review reports and quarterly progress reports.

The Action Plan for Education details clear curriculum change and other commitments that will secure the step-change needed to equip learners with the skills necessary to participate in the modern economy. It includes: actions to promote science, technology, engineering and mathematics, [STEM], at primary and post-primary levels; the introduction of a new leaving certificate computer science subject from September 2018; the development of a new primary mathematics curriculum that will support all children in the development of algorithmic and computational thinking, which form the basis of coding; and the implementation of a digital strategy in schools will seek to enrich the teaching, learning and assessment environment.

In addition, the higher and further education systems are responding strongly to the challenge of meeting Ireland's human capital needs. Graduate output increased by 7% over the past four years and there will be a further 3% increase in 2018. One thousand additional STEM graduates will graduate from the colleges in the next two years compared to 2016. Graduate employment is increasing, and employers report strong satisfaction levels with the quality of the graduates.

New opportunities are also being developed in regard to apprenticeships, and the curriculum for apprenticeships has been updated, and traineeships. Under Springboard+, 6,500 participants will have opportunities in the 2017/2018 academic year year to participate in upskilling their existing skills in areas such as ICT, advanced manufacturing, financial services, entrepreneurship and hospitality. The education system is responding robustly to the changing nature of expectations on young people [SDG 4.4].

Specific programmes exist with the Irish education sector to address disparities for disadvantaged and/or marginalised groups [SDG 4.5]. **Delivering Equality of Opportunity in Schools [DEIS] the Action Plan for Educational Inclusion**, was launched in May 2005 and, as DEIS Plan 2017, remains the Irish policy instrument to address educational disadvantage [see text box 4.2 for further details]. Additionally, in accordance with the **Traveller Education Strategy**, provision for Irish Travellers has been mainstreamed with previously segregated provision now funded as part of the mainstream system. A number of Traveller-specific supports remain in the system to assist with the transition to the mainstream system of pupils, previously provided for in segregated provision. The **National Traveller and Roma Inclusion Strategy [NTRIS 2016-2020]** also includes specific actions aimed at improving the educational experience of Irish Travellers and Roma.

In relation to **SDG 4.6**, the **National Literacy and Numeracy Strategy – Literacy and Numeracy for Learning and Life 2011-2020** – sets out to raise standards in literacy and numeracy in early years and school settings. It recognised the importance of these key skills for all aspects of day-to-day life and learning. Five years on from its launch, the mid-term impact of the Strategy has been reviewed. It shows that standards in literacy and numeracy have risen. Ireland’s students are ranked highly in international surveys, particularly in literacy. Nevertheless, significant challenges remain. Arising from the positive findings in the Interim Review, further ambitious targets are set and actions are identified to cover the period 2017-2020.

In relation to **SDG 4.7**, the **National Strategy on Education for Sustainable Development in Ireland 2014-2020** provides a framework to support the contribution that the education sector is making and will continue to make towards a more sustainable future at a number of levels: individual, community, local, national and international. This Strategy was adopted under Our Sustainable Future, and a mid-term review has been completed in March 2018. The third Forum on Education for Sustainable Development was on 15 November 2017. Key points raised at the third Forum and in submissions received have been incorporated into the mid-term review of the strategy which is now complete.

The Department of Foreign Affairs and Trade invests significantly in promoting public understanding of and engagement with global justice issues and supporting people to take action locally and globally in the creation of a more just, peaceful and sustainable world for all. Development education strengthens understanding of the global justice dimension of each of the SDGs, inspiring and enabling people to take action at local, national and global levels. The **Irish Aid Development Education Strategy 2017-2023** provides a framework for development education across the primary, post-primary, higher education, youth and adult and community education sectors. Ireland supports a number of strategic partners as part of this Strategy, as well as providing annual funding to a wide range of civil society and community groups. Initiatives include teacher training, curriculum development and rollout, workshops, competitive events, and award schemes [**SDG 4.7**].

Textbox 4.2

Delivering Equality of Opportunity in Schools

Delivering Equality of Opportunity in Schools [DEIS] the Action Plan for Educational Inclusion, was launched in May 2005. The DEIS Plan 2017, which replaced this, sets out our vision for future intervention in the critical area of social inclusion in education policy and remains the Irish policy instrument to address educational disadvantage. The Action Plan focuses on addressing and prioritising the educational needs of children and young people from disadvantaged communities, from pre-school through second-level education [3 to 18 years] and is one element of a continuum of interventions, which includes second-chance education and training, access measures to support increased participation by underrepresented groups in further and higher education and the ongoing development of provision for pupils with special educational needs. Its frame of reference is based on the definition of 'educational disadvantage' contained in the Education Act 1998: "... the impediments to education arising from social or economic disadvantage which prevent students from deriving appropriate benefit from education in schools" and it is grounded on the following principles:

- ▶ That every child and young person deserves an equal chance to access, participate in, and benefit from education;
- ▶ Every person should have the opportunity to reach his or her full educational potential for personal, social and economic reasons, and
- ▶ Education is a critical factor in promoting social inclusion and economic development.

The key objective of the Plan was to draw together the range of interventions at that time to tackle educational disadvantage and build on them within an overarching programme to provide a more integrated and effective range of educational inclusion supports to schools.

DEIS provides for a standardised system for identifying levels of disadvantage and an integrated School Support Programme.

825 schools were included in the programme in the 2016/17 school year. These comprise 640 primary schools [328 urban/town schools and 312 rural primary schools] and 185 second level schools. The total Department of Education and Skills spend on DEIS is in the region of €115 million in 2017. Additional funding is provided from Department of Employment Affairs and Social Protection and from the Department of Children and Youth Affairs. The DEIS Plan 2017 allocated additional funding to allow for the addition of 79 new schools to the DEIS programme and to also allow for the introduction of a series of pilot projects aimed at introducing measures shown to work well in improving results for disadvantaged students. This will be supported by the newly introduced School Excellence Fund which will enable schools to apply for funding to implement innovative programmes which are context-specific and aimed at improving learning outcomes.

Evaluations of the DEIS programme have found improvements over time in absenteeism rates within DEIS schools, the gap between DEIS and non-DEIS schools in the proportion of students completing junior and senior cycle, and [to a lesser degree] the gap in overall Junior Certificate grades between DEIS and non-DEIS schools. However, the continuing concentration of disadvantage in DEIS schools, especially certain urban primary schools, highlights the need for continued supports for such schools.

Supporting the SDG Globally

Ireland continues to support the provision of quality basic education through direct support in its Key Partner Countries, support to the Global Partnership for Education and United Nations Children's Emergency Fund [UNICEF], and through international and national NGOs. Equity is a priority and our support for education has a strong focus on girls' education, including their progression to secondary level. Ireland addresses the social and economic barriers to girls participating in education through direct and indirect measures including gender responsive education planning, ensuring a safe school environment for girls, targeted scholarships, and reducing the risk of gender-based violence in education. Ireland also ensures that other poor, marginalised and vulnerable children have access to quality basic education services through strengthening education systems in remote and poorly served areas, supporting community school initiatives and social protection measures [SDG 4.1, 4.5, 4.c].

To improve quality, Ireland invests in teacher training, building the capacity of school management and strengthening community oversight, and demands for accountability. In addition, we aim to improve learning outcomes through innovative approaches which build on Ireland's experiences [e.g. the Young Scientist and Technology Exhibition] or utilise available technologies.

Through multiple NGO-led initiatives, Ireland supports early childhood development, care and pre-primary education; life skills education for adolescents and young people; and adult literacy and numeracy [SDG 4.2, 4.6].

Increasingly Ireland is supporting technical and vocational training to enable young people to develop skills leading to employment. We also support initiatives aimed at integrating persons with disabilities into technical and vocational training programmes [SDG 4.4, 4.5].

Through the Irish Aid Fellowship Training Programme and other country specific fellowship programmes Ireland supports mid-career professionals to undertake post-graduate studies in Ireland or their own countries [SDG 4B].

Ireland recognises that the continuity of education for children and young people affected by conflict and other crises is essential not only to their health and development but also to fostering inclusion, tolerance, human rights and social cohesion, and in the longer term to building peaceful and stable societies. At the 2016 World Humanitarian Summit Ireland committed "to providing support for greater educational and livelihood opportunities for displaced people, particularly those affected by the Syria crisis, as a contribution to their dignity and self-reliance, and to enable displaced people to make their valuable contributions to the societies in which they live". Ireland supports education in emergencies

and protracted crises through core funding to the United Nations High Commission for Refugees [UNHCR] and the UNICEF, as well as through our earmarked funding for specific country and regional responses. In addition, through our support for NGOs we assist thousands of internally displaced and refugee children and adolescents, in particular girls, to access quality education and psychosocial support.

Textbox 4.3

Zambia Case Study: Campaign for Female Education

Ireland partners with the Campaign for Female Education [CAMFED] in Zambia to support girls in rural areas to continue their education through junior and senior secondary levels. As well as providing financial support, CAMFED ensures that the girls have a safe learning environment and train teachers and community mentors to recognise signs of abuse and on the processes to follow up.

Mwiya [second left front row] lives in Shangombo one of the poorest and very remote districts in Zambia. Her father died when she was ten and in Grade 3. Her mother died 6 years later and she remained with her grandmother, who had many other orphans to care for and was also unwell. Through Irish Aid support to CAMFED, Mwiya received bursary support to finish her high school, get technical training and start a business. In her own words: “When I was in Grade 8 in Shangombo District, I was selected for sponsorship on the CAMFED programme. I knew this was the beginning of better things to come. I worked very hard because I wanted to be able to support my grandmother.”

After completing her secondary education Mwiya, studied business skills with support from the CAMFED and with a grant of K350 [€29] started a business selling hair extensions. With profits from this business and continuing support from CAMFED Mwiya enrolled in a bricklaying course. She continues: “ On my return to Shangomobo I was awarded a contract to build two classroom blocks at the local primary school from which I earned K4,500 [€375]. The district leadership was very impressed with our work, especially when he learnt that I was a female bricklayer. Since then other opportunities have come my way and I have employed two male helpers because this is a male dominated field. I am very excited. I will soon be signing a K1 million [€83,000] contract!”

Goal 5: Achieve gender equality and empower all women and girls

Based on EU data, the overall percentage of Irish women [aged 15-74] who have **experienced physical or sexual violence within the prior 12 months** was in line with the EU average at 8%, though there is variation between different age cohorts. It should also be noted that this EU data dates from 2012 and may not be sufficiently current. Ireland's **gender employment gap** was above the EU average in 2016 [and 2017] but has reduced from its pre-recession 2008 level. Ireland's performance under this indicator improved during the recession and worsened as the economy recovered but appears to have stabilised in recent years. Ireland's **gender pay gap [in unadjusted form]** was below the EU average in 2014, and again demonstrates a pattern of improvement followed by disimprovement in line with recession and economic recovery. It should be noted that 2015 and 2016 data is not available for Ireland within the Eurostat data set and therefore more recent years EU wide comparisons are not possible here. The percentage of Irish women outside the labour force due to caring responsibilities [referred to as the **'inactive population due to caring responsibilities'**] was above the EU average in 2016 [and 2017] and was the second highest within the EU. The percentage for Irish women was also approximately 5 times that for men. While the disparities in the distribution of caring responsibilities between women and men are significant from the perspective of gender equality, it should be noted that their discussion here should not be regarded as dismissing the important and valuable contribution which carers make to society. The **number of seats held by women in Ireland's parliament** was below the EU average in 2017 but increased at the last national elections [see below for further details]. The **percentage of positions held by women in senior management in 2017** in Ireland was also below the EU average but has been increasing steadily since 2012.

Ireland has a comprehensive policy and legal framework to promote gender equality and the empowerment of women and girls. Nonetheless as indicated above, particular challenges remain in respect to women's representation in leadership and decision-making, gender gaps in employment and income levels, the prevalence of violence against women, evidence of gender segregation in education and occupations, and responding to the diversity of women.

The EU Gender Equality Index 2017 ranks Ireland eighth in the EU for its progress towards gender equality. The Index was developed by the European Institute for Gender Equality [EIGE] and provides an easily interpretable measure of gender equality in the EU, between Member States and across time, over six core domains of work, money, knowledge, time, power and health.

An all-of-government set of priorities in relation to gender equality, to be advanced over the next four years, is set out in the **National Strategy for Women and Girls 2017-2020**, and was developed following extensive consultation with stakeholders and the general public.

The vision of the Strategy is of "an Ireland where all women enjoy equality with men and can achieve their full potential, while enjoying a safe and fulfilling life". In promoting equal treatment and the empowerment of women and girls, the National Strategy is inclusive of individuals whose sex characteristics, gender identity or gender expression is female.

For the 2017-2020 period, the overall goal of the Strategy is to change attitudes and practices preventing women's and girls' full participation in education, employment and public life, at all levels, and to improve services for women and girls, with priority given to the needs of those experiencing, or at risk of experiencing, the poorest outcomes. This goal will be advanced through 139 actions across six high-level objectives, as follows:

- ▶ advance socio-economic equality for women and girls [SDG 5.1];
- ▶ advance the physical and mental health and well-being of women and girls [SDG 5.6];
- ▶ ensure the visibility in society of women and girls, and their equal and active citizenship;
- ▶ advance women in leadership at all levels [SDG 5.5];
- ▶ combat violence against women [SDG 5.2]; and
- ▶ embed gender equality in decision-making.

Government is advised on the implementation of the Strategy and in monitoring progress by a Strategy Committee chaired at junior Minister level, which includes all Government Departments, key public bodies, the social partners and civil society in its membership. It is intended to publish progress reports annually.

The Strategy includes actions to give effect to the positive duty introduced in the **Irish Human Rights and Equality Commission Act 2014**, which requires public bodies to have due regard to equality and human rights issues that are relevant to their functions and which has provided a mechanism to apply a gender lens to decision-making. The Strategy also commits to building capacity with the Civil and Public Service with regard to gender mainstreaming and gender budgeting, building on the Government's commitment to develop the process of budget and policy proofing as a means of advancing equality, reducing poverty and strengthening economic and social rights. This work has advanced through a pilot programme of equality reporting for the 2018 budgetary cycle, anchored in the existing performance budgeting framework. An update on progress to date is included in the Public Service Performance Report 2017².

The CSO **Men and Women in Ireland** series of statistical reports are updated every two years. The report presents a set of 73 indicators which identify important gender differences in the activities of men and women in relation to their place in society, their employment, their education, and their health and lifestyles.

The **first national strategy on domestic, sexual and gender-based violence ran from 2010 to 2014**. The **second national strategy runs from 2016 to 2021 [SDG 5.3]**. It is a whole-of-Government approach to these issues. It has three overarching aims: to change societal attitudes, to hold perpetrators to account and to improve the support that is available to victims. A national awareness campaign, which is a key action in the strategy, is ongoing. The overall aim of the campaign is to increase the awareness of domestic and sexual violence, to bring about a change in long established societal behaviours and attitudes and to activate bystanders with the aim of decreasing and preventing this violence. It recognises that women and men are victims of such crimes. The campaign was sought by and is supported by NGO stakeholders. The campaign is currently focused on domestic violence and the focus will shift to sexual violence in 2019. **The Domestic Violence Bill**

2 Government of Ireland, [April 2018], "Public Service Performance Report 2017", Department of Public Expenditure and Reform.

was enacted on 8 May 2018 and significantly enhances the legal protections available to victims of domestic violence. This legislation will also bring Ireland a step closer to ratifying the Istanbul Convention which is a commitment in the Programme for Government.

In addition, the **Second National Action Plan to Prevent and Combat Human Trafficking in Ireland [SDG 5.2]** was launched in October 2016. Ireland's response to human trafficking is focused on a victim-based approach and is gender-sensitive. Since 2009 the majority of victims discovered each year have been women, primarily trafficked for sexual exploitation, but also for forced labour. The Plan has as a key objective the continued development of structures to prevent all forms of human trafficking, the identification and support of victims, and the prosecution of those responsible. This has included taking legislative measures to reduce the demand for the services of trafficking victims in prostitution, which was fulfilled in 2017 with the introduction of the **Criminal Law [Sexual Offences] Act 2017**.

The **Criminal Justice [Female Genital Mutilation] Act 2012 [SDG 5.3]** makes it a criminal offence to remove a girl from the state to mutilate her genitals. Since 2011, there have been about 3,780 women living in Ireland who have undergone the mutilation. The level of Female Genital Mutilation [FGM] continues to increase in Ireland. A EIGE Report suggests that the number of girls at risk of FGM in Ireland is between 158 [low-risk scenario] and 1,632 [high-risk scenario].

The HSE National Social Inclusion Office was involved in the production and dissemination of the second edition of **Female Genital Mutilation Information for Health-Care Professionals Working in Ireland**.

Ongoing work in this area includes plans to:

- ▶ support training;
- ▶ raise awareness; and
- ▶ develop and strengthen appropriate referral and care pathways.

It also includes plans to provide appropriate information to health professionals and members of communities in partnership with relevant community-led organisations.

The enactment of the **Electoral [Amendment] [Political Funding] Act 2012 [SDG 5.5]** introduced gender quotas for national politics, requiring political parties to select at least 30% of candidates of each gender for national elections or else lose 50% of their State funding for the parliamentary term. The outcome was an increase in the number of female candidates running in the 2016 general election. Thirty-five women were elected to the Dáil [the Lower House of the Irish Parliament] in 2016, an increase of 10 on the 2011 general election and the highest number of female TDs ever. The percentage of women among Dáil members rose to 22% from 15% in 2011. This is a significant increase but female representation in the Dáil remains low by international standards.

Since 1993 a national target has been in place that women should constitute at least 40% of the membership of State boards. In 2006, women comprised 34% of all board members. The Government introduced new Guidelines on Appointments to State Boards in 2014, which included a package of measures to meet the 40% target. The Government also set an enhanced target of 45% for boards already meeting the 40% target. Since the launch of the Guidelines, 30% of over 7,500 applications received for state board appointment came from women, who made up some 45% of the appointments under this process. As of December 2017, women constitute 39.9% of board members, the highest percentage since the target was introduced, while the 40% target has been met in respect of almost half [48.9%] of all State boards.

Significant progress has also been made to advance women into senior and middle management positions in the Irish Civil Service. A previous National Women's Strategy in 2007 set a target for 27% of all Principal Officers [senior managers] to be women. That target has been exceeded significantly. Women now constitute 40% of all Principal Officers, 33% of all Assistant Secretaries [deputy heads of Government departments] and 20% of all Secretaries General [heads of Government departments]. Further improving gender balance is a key strand within the Government's Civil Service Renewal Programme, launched in 2014. In January 2017, the Government announced further measures designed to foster greater gender equality. The measures announced include a new target of 50/50 for senior level appointments. Where two candidates of equal merit are under consideration for an Assistant Secretary vacancy, preference will be given to the female candidate where women are under-represented on the management team of the Department in question.

Turning to the judiciary, as of April 2018, 37% of Irish judges are female [59 of 161 judges]. In the Irish Supreme Court, three of the 9 judges are women, as is the former Chief Justice who retired in 2017. The number of female judges throughout the Irish judiciary has almost tripled in the past two decades.

While progress has been made to improve female representation in national politics, public administration, and on State boards, women remain underrepresented in decision-making roles in many areas of Irish life, including in senior business leadership and on corporate boards. While the percentage of women non-executive directors of corporate boards increased by almost 11 percentage points between 2007 and 2017, their representation still remains low at 17.6%.

Women are similarly under-represented in senior positions in the financial sector. The Central Bank indicated in March 2017 that women occupied only 20% of senior management positions in the financial services sector between 2012 and 2016.

There remains a gender imbalance in the staffing of Irish higher education institutions, particularly at senior levels. Although entry-level academic grades are gender balanced, significant gender imbalances arise at higher-level academic positions. Currently 81% of academic professor positions are filled by men. Men also represent 72% of the highest paid non-academic staff. The Higher Education Authority [HEA] National Review of Gender Equality in Irish Higher Education Institutions, published in 2016, highlighted the importance of achieving gender equality in employment in higher education institutions as a "means to maximise their pursuit of excellence and successfully meet the many social, economic and cultural challenges of the future".

Women continue to experience barriers to full socio-economic equality. As the economy has emerged from recession, the labour market participation rate for women has returned to 2006 levels and stood at 53.3% in quarter 4, 2016. The number of women employed increased by 2.7% in quarter 4, 2016 as compared to quarter 4, 2015. However, there continues to be a gap of almost 14 percentage points between the labour force participation rate of women and that of men, which was 67.1% in quarter 4, 2016. While the proportion of men working part-time has doubled since 2006, in quarter 4, 2016 women were still almost three times more likely than men to work part-time, with a third of employed women in that situation.

On average, female employees were paid 13.9% an hour less than male employees in Ireland in 2014 while the average EU gender pay gap in 2015 was 16.3%.

Consistent poverty levels are higher for women than men. In 2015, the consistent poverty rate for women was 9.1% compared to 8.3% for men. The risk of poverty for women over 65 is 2.6%, slightly less when compared to 2.9% for men over 65. The Government has taken a series of actions to address consistent poverty levels. Budget 2018 increased social welfare payment rates by €5 per week. In January 2017, the Government increased the level of the National Minimum Wage to €9.25 an hour.

Measures being taken under the National Strategy for Women and Girls to tackle these economic inequalities include initiating dialogue between union and employer stakeholders to address the gender pay gap, and developing practical tools to assist employers to calculate the gender pay within their organisations and to consider its aspects and causes. Additionally Ireland will promote wage transparency in the period to 2020 by requiring companies of 50 or more employees to complete a wage survey periodically and to report the results. The Strategy also provides for specific supports for female entrepreneurship.

One strand of addressing female poverty rates will focus on reducing the gap in poverty rates between female-headed households and male-headed households. Measures to be undertaken under this heading include programmes to assist return to the labour market.

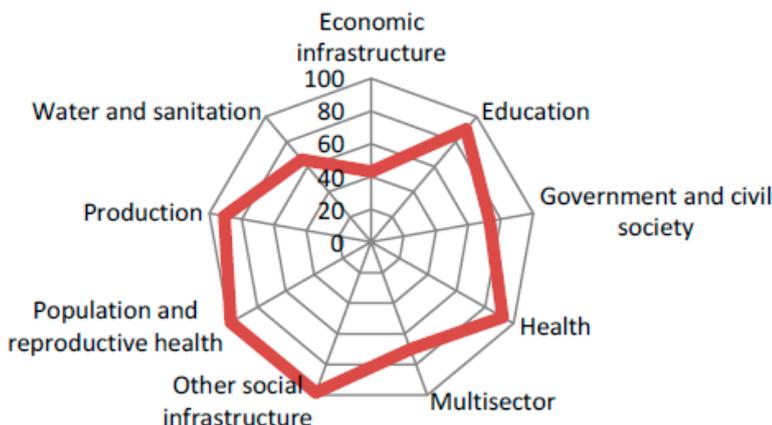

It is acknowledged in national policy that the diversity of women's circumstances poses a challenge, as outcomes on employment, poverty, leadership, and well-being can vary widely depending on a woman's situation. Outcomes are significantly poorer for Traveller women across a range of areas. Lone parents and women with disabilities continue to have much lower rates of labour market participation. Roma and some migrant women also experience significantly poorer outcomes in terms of employment and access to resources. The needs of lesbian, gay, bisexual, transgender and intersex [LGBTI] persons are less well understood, with less evolved policy responses as a result. Positive action measures for specific categories of women experiencing particular disadvantages will remain a priority.

Supporting the SDGs Globally

Gender equality and women’s empowerment is at the core of Ireland’s international development cooperation programme and our foreign policy. Specifically, we work to [i] promote gender equality and ensure women and men have equal access to and control over resources, services and opportunities; [ii] ensure that discrimination against women and girls is reduced; and [iii] that women are empowered and are given meaningful space and voice to participate in decision-making processes.

Ireland believes that gender equality is a prerequisite to development and we are committed to supporting gender-responsive policy and programming. The OECD Development Assistance Committee’s [DAC] Peer Review [2014] notes that “Ireland is a strong leader internationally on gender equality and women’s empowerment [and has] consistently played an important agenda-setting role.” In 2016, 84% of Ireland’s bilateral allocable aid had gender equality and women’s empowerment as a principal or significant objective, an increase from 79% in 2015.

Figure 4.3: OECD DAC (2018) Ireland’s Percentage of Gender Equality Focused Aid by Sector

In co-chairing the negotiations on the SDGs, Ireland advocated for gender equality to be a core priority of the 2030 Agenda. It is estimated that of the 232 indicators identified to monitor progress in achieving the SDGs, 25% explicitly or implicitly address gender equality.

Ireland was elected to the Commission on the Status of Women [CSW] in 2017 and will continue to serve as a member of the Commission until 2021. Ireland will also hold the position of Chair of the Bureau of the Commission for two sessions in 2018 and 2019. As part of its candidacy, Ireland has pledged to work to strengthen the voice and functioning of the Commission, enhance its contribution to the wider 2030 Agenda for Sustainable Development and promote the participation of civil society in the Commission’s work. Ireland successfully chaired this year’s session of the Commission which resulted in agreed conclusions on challenges and opportunities for rural women and girls. In our National Statement, Ireland highlighted that rural women and girls are often the farthest and hardest to reach and face particular challenges especially in the areas of poverty and discrimination [SDG 5.1].

One World One Future identifies gender-based violence [GBV] as a fundamental abuse of human rights which can have serious impacts on women's health, well-being and livelihoods. Irish Aid has prioritised policy development, funding and research to address GBV and is playing a leadership role in the elimination of GBV in all its forms. We support initiatives to increase awareness of gender-based violence, and community based programmes to address behaviour change, for example through our support to Raising Voices, a Ugandan-based organisation which works to prevent violence against women and children. We also support the Irish Consortium on Gender-based Violence [ICGBV], a unique entity made up of Irish development and humanitarian NGOs, the Irish Defence Forces and Irish Aid. The Consortium aims to increase knowledge and understanding of violence against women and girls and build leadership to support the vision of a world free from gender-based violence [SDG 5.2, 5.3].

Ireland is recognised as a leading advocate of United Nations Security Council [UNSC] Resolution 1325 on Women, Peace and Security [WPS], which reflects our rich tradition in the areas of humanitarian assistance and development co-operation in fragile contexts, peacekeeping and conflict resolution, including on the island of Ireland. The priority we attach to the WPS agenda is in recognition of the fact that when women are included in peace processes there is a 35% increase in the probability of an agreement lasting at least 15 years. In 2015, Ireland launched its second National Action Plan [NAP] on Women, Peace and Security. A key commitment of our NAP on Women, Peace and Security is to support the protection women and girls in humanitarian crises, including those crises arising from conflict has and we target our support to ensure the protection of women and girls is effectively addressed in humanitarian operations [SDG 5.2, 5.3].

As part of its active engagement in the OECD DAC network on Gender Equality [Gendernet] Ireland supported the development of a key Policy Paper on **Gender equality and women's empowerment in fragile and conflict-affected situations** [October 2017], which assessed how donors can improve the quality of their gender equality and women's empowerment programming in fragile situations. The Policy Paper stresses the need for a shift in perspective towards a more holistic approach for development partners that is deeper, wider, and more politically informed, with a strong focus on women as agents of change [SDG 5.5].

In partnership with UNESCO, Ireland supports the delivery of good quality comprehensive sexuality education that empowers adolescents and young people, and builds agency while developing the skills, knowledge, attitudes and competencies required for preventing HIV, reducing early and unintended pregnancies and eliminating gender-based violence [SDG 5.6].

Removing the legal and societal barriers faced by women limiting their access to and control over assets and resources is a component of Ireland's focus on women's economic empowerment and of inclusive economic growth. Increasing the availability sex-disaggregated data is also key to ensure that access to services can be improved. [SDG 5A].

Goal 6: Clean Water and Sanitation

Ireland's performance under this Goal is mixed based on latest available EU and OECD data. The OECD, through its Better Life Initiative, places Ireland within the top tier of member countries in relation to freshwater abstractions, however this is based on 2009 data. Ireland is in the middle OECD tier in relation to renewable freshwater resources and, consistent with the OECD average, public satisfaction with local water quality has fallen slightly in the recent years. Based on EU SDG indicators, Ireland outperformed the EU average in relation to **biochemical oxygen demand [BOD] in rivers** in 2012, though failed to meet the threshold for the cleanest river category of less than 1.0 mg/L BOD. Ireland was also below the EU averages for **Nitrate in groundwater** and **Phosphate in rivers**. At 65%, Ireland was in 2014 in the bottom half of EU countries in terms of percentage of the **population connected to at least secondary wastewater treatment**. While Ireland's relatively low population density may mean that secondary treatment may not be necessary for all settlements, as many will be small and scattered, there is still room for improvement. EU data also indicates that some 0.2% of the Irish population have **neither a bath, nor a shower, nor indoor flushing toilet in their household** which, while surprising in the first instance, is the fifth best finding among the EU28.

The Irish Government acknowledges that, over the last decade, the quality of our water has stood still and that, as we face increasing demands on our water resources from a growing population and economy, it is essential that we take strong steps to protect and improve our water quality.

In this context the Government launched the **River Basin Management Plan [RBMP] for Ireland 2018-2021** in April 2018. The RBMP outlines the measures the State and other sectors will take to improve water quality in Ireland's groundwater, rivers, lakes, estuarine and coastal waters in the period to 2021. The Government aims to protect and improve water quality in 726 of Ireland's 4,829 water bodies over the next four years. The Plan responds to requirements under the EU's Water Framework Directive [WFD] [**SDG 6.1-6.6**].

Amongst the Plan's main commitments are:

Planned investment by Irish Water [the national Water Utility] of approximately €1.7 billion in waste water infrastructure and projects in 255 urban areas by the end of 2021 – protecting both the environment and public health.

Deployment of 43 specialist local authority investigative assessment personnel, who will carry out scientific assessments of water bodies and drive the implementation of measures at a local level.

A new Agricultural Sustainability Support and Advisory Programme, a partnership between the State and the dairy industry, consisting of 30 Sustainability Advisers. Advisers will engage collaboratively with farmers to promote agricultural best practice across the dairy sector in 190 targeted 'areas for action'. The programme will provide advice and support to farmers, facilitating knowledge transfer and encouraging behavioural change as the cornerstone of the drive towards better farming practice and water quality [**SDG 6.3**]. The initiative will complement agri-environment measures under the Rural Development Programme, the Nitrates Action Programme and the National Dairy Sustainability Forum.

A **'Blue Dot Catchments Programme'**, a programme to create awareness, promote best practice and focus efforts and resources to protect Ireland's highest quality waters [SDG 6.6], vital to the Irish environment and our national tourism and recreation sectors.

Greater focus on protecting drinking water sources in over 700 public and private drinking water supplies [SDG 6.1] and €73 million per year in investment by Irish Water to reduce leakage, saving 61 million m³ of water each year [similar to total non-domestic water demand in the Greater Dublin Area every year]. This has the effect of reducing the leakage rate of drinking water produced from 45% to 38%.

A **Community Water Development Fund** to support community initiatives to improve water quality. The fund will be administered by the newly-established Local Authority Waters and Communities Office [LAWCO]. LAWCO consists of Community Water Officers located across the country who are already working with the public, communities and stakeholders on measures to improve local water quality.

Supporting the SDG Globally

Ireland recognises that affordable and sustainable access to clean water and sanitation is a key public health and development issue. Ireland's primary mechanism for support under this goal is the GEMS/Water, a unique global water quality monitoring network operating in 125 countries around the world, which provides water quality data to a central database known as **GEMStat**. GEMS/Water was established in 1978 in response to a recommendation made at the 1972 Stockholm Conference on the Human Environment as an interagency programme under the auspices of the United Nations through the United Nations Environment Programme [UNEP], the WHO, the World Meteorological Organisation [WMO], and the United Nations Educational, Scientific and Cultural Organisation [UNESCO]. In November 2014, the Government of Ireland, through its Environment and Foreign Ministries, agreed to provide support for the capacity development element of the GEMS/Water programme [further details in text box 4.4] [SDG 6.1].

The promotion of Community Led Total Sanitation [CLTS] is another global initiative which Ireland supports. Among the significant benefits of this approach is that communities understand that open defecation results in the contamination of their local environment including water sources. With CLTS implementation, countries with endemic diseases such as cholera, typhoid and other enteric diseases have demonstrated tremendous reductions in incidence of water and sanitation related diseases. For example, using this approach, incidents of water and sanitation related disease reduced by 50% in Kenya's Nyando District.

At country level, Ireland has supported the work of the Liberia WASH Consortium, which is made up of five international NGOs including Oxfam GB, Tearfund, Concern Worldwide, Action Contre la Faim [ACF] and Water Aid. The overall objective of the WASH Consortium is to contribute to the improvement of the health status of Liberians in cooperation with the Government of Liberia's development plans and goals. It aims to support the re-establishment and building up of government preventive health services and deliver water, sanitation and public health projects through a single, coordinated, integrated strategy [SDG 6.1, 6.2, 6B].

Text box 4.4

GEMS/Water Capacity Development Centre

The GEMS/Water Capacity Development Centre was established in 2015 and is a Centre of the School of Biological, Earth and Environmental Sciences and Environmental Research Institute of University College Cork. The functions of the Centre are to promote and support water quality monitoring and assessment on behalf of UNEP and in co-operation with UN Water and its thematic priority area of Water Quality.

A primary objective of GEMS/Water is to ensure compatibility and comparability of data for use in national, regional and global assessments. The Centre encourages a standardised approach to water quality data generation through providing guidance and training on all aspects of water quality monitoring and assessment and quality assurance of monitoring activities. Centre staff liaise closely with the GPCU in Nairobi, the GEMS/Water Data Centre, UNEP Regional Offices and regional GEMS/Water partners to identify capacity needs at regional and national levels, to provide appropriate support, and to develop training for delivery in-situ and online in countries all over the world.

The key elements of the activities of the Centre over the next five years are:

1. Carrying out a detailed training needs assessment for water quality monitoring in Sub-Saharan Africa and the development of a training strategy to meet those needs;
2. Working closely with UN Environment Regional Offices and GEMS/Water National Focal Points to prepare capacity development strategies for the other world regions;
3. Development of training materials for face to face and online delivery in partnership with GEMS/Water Regional Hubs, focusing initially on the Latin American and Caribbean Regions together with the National Water Agency [ANA] in Brazil;
4. Organisation and delivery of workshops and provision of expert advice on monitoring programme design and implementation in Africa and other world regions as required;
5. Development of a suite of technical training courses on water quality monitoring and assessment available in a variety of delivery modes, with a particular focus on initial implementation in Africa and then to all regions online;
6. Tailor-made training and assistance in the Centre;
7. Development of a “training the trainers” programme to be delivered globally in a blended learning format;
8. Updating and production of appropriate guidebooks and handbooks to accompany training courses.

Goal 7: Ensure access to affordable, reliable, sustainable and modern energy for all

The EU SDG indicators relate to energy consumption, energy supply and access to affordable energy. Ireland's performance under these indicators is mixed relative to other EU countries. The **decrease in primary energy consumption** in Ireland in 2015 relative to 2000 was below the EU average, however Ireland's **decrease in final energy consumption** [which only covers the energy consumed by end users], again in 2015 relative to 2000, was above the EU average. In terms of **final energy consumption in households per capita**, Ireland was above the EU average in 2015 but again has achieved reductions relative to year 2000 levels. Ireland had the highest level of **energy productivity** within the EU in 2015. Ireland's **share of renewable energy in gross final energy consumption** was also below the EU average in 2015 and the country's level of **energy dependence** in 2015 was significantly above the EU average. In terms of energy affordability, the percentage of the Irish **population unable to keep their home adequately warm** was marginally below the EU average in 2015 [and improved significantly in 2016]. Ireland's energy consumption and supply is considered in greater detail in the paragraph below.

Ireland had the fourth highest rate of energy import dependency (85.3%) among the EU Member States in 2014, mainly in fossil energy. This dependency is both expensive (€5.7 billion in 2014) and environmentally unsustainable. However, overall energy use in Ireland has declined since its peak in 2008. While this was primarily linked to the economic recession, there is evidence of increasing energy efficiency. There was also an increased use of renewable energy in this period. As Ireland returns to prosperity, decoupling of economic growth from increasing energy use needs to be accelerated. Ireland's principal energy requirements arise from transport, accounting for 35% of the total, and residential heating and electricity, accounting for 25%. Decarbonisation of energy use in the transport sector is a key challenge. Fossil energy makes up about 90% of Ireland's energy use profile, of which oil (at 47%) remains the dominant fossil energy used, primarily for heating and transport. Overall trends in the use of various fossil energy sources vary, but there is a general decrease in fossil energy use and the use of renewable energy is growing, albeit from a very low base.

Ireland's full energy policy is set out in the Government White Paper '**Ireland's Transition to a Low Carbon Energy Future 2015-2030**'. The paper takes into account European and International climate change objectives and agreements, as well as Irish social, economic and employment priorities. As we progress towards a low carbon energy system, this policy update will ensure secure supplies of competitive and affordable energy to our citizens and businesses. It sets a vision of a radical transformation of Ireland's energy system which is required to meet our sustainable energy and climate policy objectives. This transformation sets out a pathway to achieving a low carbon energy system by 2050.

The policy direction looks to accelerate the transition to a low carbon economy in a cost efficient manner by prioritising the use of energy efficiency measures across all sectors in society, by increasing our use of renewable energy sources and by reducing over time our dependence on fossil fuels.

It is a transformation that is already underway. But, like other nations, we need to intensify our efforts to combat the impact of global warming and to make sustainability the very foundation of our energy policy and that while doing so we will maintain stability, affordability, and security of supply.

The policy framework gives a particular importance to energy efficiency, which will be at the centre of our energy transition. New technologies like smart meters, heat pumps, and mobile connectivity will allow citizens to boost energy efficiency and save money by managing and reducing their energy use. Government will support the installation of energy efficiency systems in homes, businesses and the broader public sector.

We will accelerate the development and diversification of renewable energy generation. New technologies, services, energy network architectures and community-based energy initiatives will emerge to facilitate and drive the energy transition. A low carbon future will involve: radically changing our behaviour as citizens, industry and Government, becoming more energy efficient, generating our electricity from renewable sources of which we have a plentiful indigenous supply, moving to lower emissions fuels [e.g. moving away from peat and coal to lower emission generation sources], and ultimately away from fossil fuels altogether, increasing our use of electricity and bioenergy to heat our homes and fuel our transport, increasing the Biofuels Obligation and improving take-up of zero and low carbon vehicles such as electric and natural gas vehicles, supporting the wide scale deployment of renewable heat in the business, public and residential sectors and adopting new technologies as they emerge. Ireland's EU 2020 renewable energy target is to increase the share of final energy consumption made up of renewable energy sources [RES] to 16%. This target is broken into three key sectors with individual targets for each sector: 40% of electricity supply [RES-E], 12% of heating [RES-H], and 10% of transport [RES-T]. Ireland also has a target of a 20% improvement in energy efficiency by 2020.

Ireland will further develop a coordinated energy security policy, which encourages diversification of energy supplies and facilitates more integrated energy markets, through our membership of the EU and the International Energy Agency [IEA]. Achieving our sustainable energy goals, and having fully integrated and well-functioning markets, will play the central role in delivering our energy security.

A new **National Affordable Energy Strategy** was published in 2016 [SDG 7.1]. It outlines a new methodology for measuring and reporting energy poverty, actions to improve energy efficiency in the rental sector, measures to ensure better quality services to energy customers and a new pilot scheme for deep energy upgrades for people suffering from certain chronic health conditions. The new strategy maintains the objective set out in the first Government strategy on affordable energy, published in 2011, that everyone should be able to afford to adequately heat and power their home. It also reflects the progress made in understanding the nature of energy poverty in Ireland, along with the views received from a stakeholder consultation exercise on energy poverty conducted in February 2015.

The **National Development Plan 2017-2027** published in February 2018 includes Transition to a Low Carbon and Climate-Resilient Society as one of its 10 strategic priorities and allocates some €20 billion in capital funding for energy efficiency, renewable energy and energy security projects over the next 10 years [SDG 7.1, SDG 7.2 and SDG 13.2]. Specifically, these projects will include:

- ▶ Investment in energy efficiency, with upgrades to homes increasing from 30,000 to 45,000 per annum from 2021 to achieve a minimum BER Rating 'B'.
- ▶ Investments in energy efficiency of existing commercial and public building stock with a target of all public buildings and at least one-third of total commercial premises upgraded to BER Rating 'B'.

- ▶ Supports for changing out oil-fired boilers to heat pumps, along with the provision of roof solar, in at least 170,000 homes.
- ▶ New Renewable Electricity Support Scheme to support up to 4,500 megawatts of additional renewable electricity by 2030.
- ▶ Energy research funding to accelerate diversification away from fossil fuels to green energy, including wind, wave, solar, biomass, biofuels, biogas and hydrogen. Full roll-out of the new Support Scheme for Renewable Heat.
- ▶ Enhanced electricity interconnection, including the Celtic Interconnector to France and further interconnection to the UK.

Text box 4.5

Warmth and Well-being Case Study

The Warmth and Well-being scheme is a joint pilot initiative between the Department of Communications, Climate Action and Environment and the Department of Health. The scheme is being delivered under the Government's Strategy to Combat Energy Poverty and the Healthy Ireland Framework. The main aim of the scheme, which began in 2016, is to demonstrate the positive effects that making homes warmer and more energy efficient can have on the health and well-being of people in energy poverty who are living with chronic respiratory conditions.

The Warmth and Well-being pilot scheme is a new departure for climate, energy and health policy. It seeks to achieve energy and climate change policy objectives through actions taken in the health policy area. It also seeks to demonstrate that direct action on housing as the key determinant of health can improve an individual's health and well-being. This is an innovative way of improving health and well-being by improving the environment in which people live.

Laura Ball, homeowner and beneficiary of the Warmth and Well-being scheme; Geraldine McCullagh, Senior Occupational Therapist, HSE; Katherine Zappone, TD, Minister for Children and Youth Affairs; Denis Naughten TD, Minister for Communications, Climate Action and Environment

Spanning two very different policy areas, the success of this scheme is dependent on effective collaboration. The Department of Communications, Climate Action and Environment and the Department of Health have worked together to align policy objectives and energy and clinical eligibility criteria, while the Sustainable Energy Authority of Ireland and the national HSE work closely on the ground to recruit and support participants based on clinical need and the condition of their homes.

In total to date, 534 homes have received upgrades under the scheme, with an average cost of €15,700 per home. The upgrades have meant a significant improvement in the condition of the home and, anecdotally, in the quality of life of the occupants as well as associated energy savings and emissions reductions.

An independent analysis is being carried out to assess the health and well-being impact of the scheme. At the conclusion of the scheme and with independent evidence on its effectiveness, the potential for a wider rollout will be considered. The scheme is examining how extensive energy efficiency upgrades to homes can improve the health and well-being of people with respiratory disease who live in cold, damp conditions and are in or at risk of energy poverty.

Supporting the SDGs Globally

Ireland is committed to supporting developing countries in their transition from the inefficient use of traditional energy supplies towards the use of modern, cleaner sources of energy, such as solar energy and energy efficient cook stoves. A number of small scale pilot projects have been supported to explore off grid household energy solutions for rural communities in Sub-Saharan Africa, and offer options to be considered for scale-up as part of an overall energy solution [SDG 7.1].

For example, the Irish Embassy in Malawi are working with United Purpose to pilot an innovative model for delivering sustainable energy technologies to the poorest households in Malawi. Using the National Social Cash Transfer [SCT] system operating in the country, recipients of cash transfers also receive a free energy efficient cook-stove, while local production groups are supported to sell the same stoves to all other types of households. Initial findings from research conducted by the International Institute for Environment and Development [IIED], as part of Ireland's Climate and Development Learning Platform, indicates the stoves have been successful in enabling access and uptake by the poorest households to sustainable sources of energy. In addition, through using the cook stoves, households have been able to reduce their firewood requirements, and therefore reduce deforestation, with findings indicating a total saving by households using the cook stoves of 8.7 tons of wood fuel per day, or 3,177 tons per year [SDG 7.3].

In addition to Malawi, programmes on renewable energy have also been supported through Ireland's Embassies in Vietnam and Uganda. In Uganda, the Irish Embassy was the first to go carbon neutral, off-setting its emissions through supporting smallholder tree planting initiatives and supporting users of improved cook-stoves, purchasing carbon credits from such initiatives. Due to such support, Ugandan Irish Embassy staff were also provided with energy efficient cook stoves to promote the adoption of green practices at home as well as in the office.

Ireland has jointly signed [with the European Commission, relevant Member States and other partners], the Energy Joint Declarations of Intent with Mozambique and Zambia, under the Africa Renewable Energy Initiative [AREI]. AREI is an African-led renewable energy initiative that has the goal of bringing energy access to all communities across Africa, including through small-scale, distributed, locally-controlled renewable energy systems. The Declarations of Intent commit Ireland, alongside EU Member States, to provide technical assistance and technical knowledge transfer, assist in the development of off-grid solutions to complement or improve rural electrification efforts, and to help identify and bring forward relevant energy projects to increase access to clean, renewable and sustainable energy sources. Ireland's Minister for Communications, Climate Action and the Environment signed the Declarations on behalf of Ireland on the 16th of November 2016, during the United Nations Framework Convention on Climate Change [UNFCCC] 22nd Conference of Parties [COP22] [**SDG 7A**].

Goal 8: Decent Work and Economic Growth

The EU SDG indicators for this Goal mainly focus on employment data within Member States. Ireland's **total employment rate** was above the EU average and the number of Irish **young people neither in employment nor in any education and training** was in line with the EU average in 2017. **Long-term unemployment** in Ireland more than halved between 2011 and 2017, and is now marginally below the EU average. **Involuntary temporary employment** in Ireland was below the EU average in 2017, both in total and disaggregated for women and men. Regarding safety at work in Ireland, **fatal accidents at work** were, on a per capita basis, above the EU average in 2015. This could be due to the relatively large share of employment within the agricultural sector in Ireland, as this sector is characterised by a higher prevalence of workplace accidents across the EU.

It should be noted that the EU SDG indicators for this Goal must be caveated in relation to Ireland, in particular, in relation to **economic growth**.

Notwithstanding the well-known limitations with GDP and GNP in an Irish context, it is clear that the economic expansion has been very strong in recent years. This is particularly evident in the labour market which is rapidly approaching full employment. Importantly, following a number of years of rebalancing, the composition of economic activity is also more sustainable, with all sectors positively contributing to growth.

Modified domestic demand – that is excluding volatile components of multinational investment such as aircraft and intellectual property – has made a very strong contribution to growth in recent years and now exceeds the pre-crisis peak. For instance, modified domestic demand has increased by around 5 per cent on average over the 2014-2017 period.

On foot of the exceptional growth rate recorded in 2015, as well as the growing disconnect between standard macroeconomic aggregates and actual income levels, an Economic Statistics Review Group was established by the Central Statistics Office in 2016. The remit of the Group was to advise on alternative measures that would provide better indicators of economic trends in Ireland.

One of the key recommendations of the Group was for the CSO to develop a new indicator of the size of the economy that excludes globalisation activities that have a disproportionate impact on the Irish national accounts. In July 2017, the CSO published an alternative measure of the size of the economy, so-called 'modified Gross National Income' [sometimes called GNI*]. This aggregate is equal to GNI but excludes the retained earnings of redomiciled companies, depreciation of foreign-owned intellectual property assets located in Ireland and the depreciation of aircraft owned by aircraft-leasing companies.

On a nominal basis, GNI* amounted to €189bn in 2016 compared with €276bn for Gross Domestic Product [GDP]. GNI* has increased by over 9% on average over the 2013-2016 period in nominal terms.

The latest available labour market figures nationally [Q4 2017] show that Ireland's total employment rate was 68.3% and its long-term unemployment rate was 2.5%. The latest monthly unemployment figures estimate youth unemployment at 12% in April 2018. Some 115,000 people were classified as underemployed in Ireland in Q4 2017. The Irish unemployment rate for April 2018 is estimated to be 5.9% and Ireland is approaching full employment [**SDG 8.5**].

Ireland recognises that sound and sustainable economic growth is essential to enable us to meet our SDG commitments as a whole. In order to sustain per capita economic growth over the medium and long-term, Ireland through its Department of Finance will continue to promote policies that enhance the growth capacity in our economy and ensure the long-term sustainability of our public finances [SDG 8.1]. Ireland has already taken a number of measures over the last number of years to rebalance the taxation system and enhance the capacity in the economy. In particular the introduction of a **new earned income tax credit for the self-employed** will incentivise increased participation in the labour market. Ireland has also adopted a range of measures designed to ensure that Small and Medium sized Enterprises [SMEs] have the access to funding required to support continued growth, including the rollout of an **Export Finance Initiative** and the introduction of a risk-sharing **Counter Guarantee Scheme** [SDG8.3]. Ireland will also continue to promote openness to trade and investment over the coming years. A cornerstone of our ability to attract Foreign Direct Investment [FDI] has been our competitive and stable corporate tax rate. In order to maintain this competitive advantage and attract FDI investment the corporate tax rate will be maintained at 12.5%.

Ensuring the long-term sustainability of our public finances is key to maintaining economic growth and improving living standards. Enhancing the reliance of our public finances places our economy in a better position to withstand the impact of unexpected shocks. Through prudent management of our public finances over the last number of years, our economy is now closing in on a balanced budget. To help safeguard our public finances in particular from 2019 onwards, an annual contribution of €500 million will be allocated to a '**rainy day fund**'. This measure will ensure a sustainable fiscal buffer is in place in the event of an economic downturn.

Continued sustainable economic growth and job creation will help to support a wide range of SDGs. In particular, they will ensure that the resources are available to meet our objectives under **Goal 9** to build resilient infrastructure, promote inclusive and sustainable industrialisation and foster innovation. Meeting this Goal will be mutually reinforcing, as it will enhance the potential output in the economy, further supporting sustained growth in the economy.

Ireland's response to significant increases in unemployment as a result of the economic downturn has been through the *Action Plan for Jobs* [APJ], which was initiated in 2011 and launched in 2012 as a national programme to rebuild the Irish economy and create jobs.

Since initiation of the APJ, top priorities for the programme have been:

1. To support creation of 200,000 additional jobs by 2020
2. To get Ireland to a top-five ranking in international competitiveness
3. To stimulate the domestic economy and generate employment in locally traded sectors
4. To build an indigenous engine of growth that drives up the export market share of Irish companies
5. To build world-class clusters in key sectors of opportunity

Overall, the program has been a success in terms of employment outcomes [from 1.9 million employed and 16% unemployment in 2012 to 2.2 million employed Q4 2017 and 5.9% unemployment in April 2018]. The programme has also been recognised for the performance monitoring and accountability mechanism that was created to drive implementation and reforms, which has achieved on schedule completion of approximately 90% of nearly 3,000 actions between 2012 and 2016.

Successive APJ's were released each year from 2013 to 2018. Each APJ includes a list of hundreds of Measures mapped to 7-10 key Priorities, which must be completed by the 16 Government Departments and 46 Agencies to accomplish the Government's job creation and reform objectives. The first plan contained 270 actions to be implemented by the end of 2012.

Since the first APJ, Sector Opportunities has been one of the priorities with key actions in an assortment of focus sectors. Beginning in the 2013 APJ, the Government developed cross sector Disruptive Reforms requiring whole-of-Government coordination. Examples of disruptive reforms were creation of **incentives for companies to hire the long-term unemployed**, expanding e-commerce participation of retailers, strengthening overseas support for exporters, investing in big data, and launching of a one-stop shop government licensing portal. **Emphasis on regional growth and distributed employment** and investment outcomes became a focus in 2015 once the APJ had matured and already gained significant traction.

Ireland has in place a robust suite of employment rights legislation. Further legislation is in train to provide greater certainty to employees with precarious working conditions including the difficulties caused by the increasing casualisation of work and use of zero hours' contracts. The enforcement of employment rights rests with the Workplace Relations Commission [WRC]. The WRC is an independent statutory body established in October 2015 following a major overhaul of Ireland's workplace relations infrastructure with the goal of delivering a world class workplace relations service. The WRC plays a crucial role in Ireland's ongoing economic development through supporting employers and employees in the resolution of workplace issues facilitating a healthy competitive environment based on fairness for all.

The Health and Safety Authority is the national statutory body with responsibility for ensuring that all workers [employed and self-employed] and those affected by work activity are protected from work related injury and ill-health. They do this by enforcing **occupational health and safety** law in line with the Safety, Health and Welfare at Work Act 2005, promoting accident prevention, and providing information and advice across all sectors, including retail, healthcare, manufacturing, fishing, entertainment, mining, construction, agriculture and food services [SDG 8.8].

The **Second National Action Plan to Prevent and Combat Human Trafficking in Ireland** concentrates on the elimination of all forms of trafficking human beings, including forced labour and criminality. Increased training of frontline personnel has aided in the discovery of higher numbers of victims of labour exploitation in recent years. The Plan's actions on eradicating trafficking for labour exploitation are focused on demand reduction, training, and continued support for programmes to assist victims of forced or child labour [SDG 8.7].

The EU's Youth Guarantee aims to provide young people under the age of 25 with a good quality offer of employment, continued education, an apprenticeship or a traineeship within a short time of becoming unemployed. Ireland has adopted its own national plan to implement the Youth Guarantee, *Pathways to Work* [SDG 8.6]. While youth unemployment has fallen in Ireland, and is now below the EU average, it remains high and will continue ongoing measures to reduce it.

The Department of Children and Youth Affairs operated a **Youth Employability Initiative** in 2016. The programmes assisted almost one thousand young people aged 15 to 24 years to build skills that enhanced their employability. A review of the initiative will inform the development of a new employability scheme, to be unveiled in 2018.

The overall current expenditure budget for the youth sector in 2017 is just under €60m. The **Youth Work budget** supports the delivery of a range of youth work programmes and services for all young people, including those from disadvantaged communities, by the voluntary youth work sector.

Overall, over 80% of funding is allocated to targeted youth services, which support, in the main, the targeted programmes for young people who are at risk of drugs or alcohol misuse, homelessness, unemployment or early school leaving. These schemes are:

- ▶ **Special Projects for Youth** – Grant-aid is made available in respect of out-of-school projects for disadvantaged young people. Priority is given to projects in the spheres of special youth work initiatives, young homeless people, young people at risk of substance abuse and young travellers.
- ▶ **Young Peoples Facilities and Services Fund** – This fund was established by the Government to assist in the development of preventative strategies in a targeted manner through the development of youth facilities, including sports and recreational facilities, and services in disadvantaged areas where a significant drug problem exists or has the potential to develop.
- ▶ **Youth Information Centres** – The purpose of these Centres is to provide young people with access to information on rights, opportunities, benefits, health, welfare and other matters.
- ▶ **Local Drug Task Force projects** – These projects, which target young people under the various pillars of the **National Drugs Strategy**, provide a range of supports for young people by way of targeted drug prevention and awareness programmes as well as referrals.

Innovation 2020 [SDG 8.2] is Ireland's strategy for research and development, science and technology, and was launched in 2015. Implementation of the strategy is also driven by a cross Government Implementation Group comprising the members of the Interdepartmental Committee and all public research funding agencies.

Innovation 2020 includes a focus on **Innovation for Social Progress** and recognises that innovation is key to our social development. The strategy takes account of Ireland's commitments under the SDGs, and that, "over the coming decades, we will face profound challenges, and innovation and research will be centre-stage in developing our national responses.

Innovation 2020 contains a series of actions to promote research and innovation in areas such as:

- ▶ sustainable and efficient natural resource management;
- ▶ the continued decarbonisation of the energy fuel mix, the development of indigenous energy supplies, and the move towards sustainability;
- ▶ research for policy to develop integrated approaches to addressing the challenges that arise from climate change, air and water quality and other environmental issues; and
- ▶ the sustainable development of Ireland's marine sector.

A Resource Opportunity 2012, Ireland's National Waste Prevention Programme addresses the need to achieve higher resource efficiency and decouple economic growth from environmental degradation [SDG 8.4].

Tourism is a hugely important indigenous economic sector in Ireland. In total, it was worth an estimated €8.4 billion to the Irish economy in 2016, almost 4% of GNP. Government policy on tourism is set out in the Tourism Policy Statement – **People, Place and Policy: Growing Tourism to 2025 [SDG 8.9]**. This Policy was adopted by Government in early 2015, before the adoption of the SDGs. The Policy identifies a number of principles, many of which recognise the importance of social, environmental and economic sustainability. For example, in adopting the policy the Government agreed that:

- ▶ It will place tourism as a key element of its economic strategy, with development in the tourism sector reflecting the highest standards of environmental and economic sustainability, and the role of tourism in promoting peace and political co-operation on the island of Ireland will continue to be recognised and encouraged.
- ▶ Our heritage assets will be protected, and any public investment in tourism will be based on evidenced need.

A new Tourism Action Plan to cover the period 2018-2020 will be developed in 2018. This will identify further actions necessary to develop the tourism industry out to 2025 and, in doing so, will formally take account of the SDGs.

Supporting the SDGs Globally

The promotion of inclusive and sustainable economic growth is one Ireland's high-level goals for international development and a key policy priority. This means that Ireland works strategically across the SDGs to advance economic growth which benefits poor people and is environmentally sustainable.

At a multilateral level, Ireland has supported the major international organisations involved in trade-related technical assistance and capacity building. We provided support to two World Trade Organisation [WTO] programmes supporting better health standards to improve market access and trade negotiation capacity for developing countries [SDG 8.1].

With the ILO, Ireland is supporting a programme on employment intensive investment ensuring that public and private investment deliver decent jobs for people. This programme supports employment opportunities for poor and vulnerable people, contributing to decent work in target countries that include a number of Ireland's key partners [Zambia, Malawi, Mozambique, Tanzania, Kenya, Rwanda, Uganda and Vietnam] [SDG 8.3, 8.5].

In Mozambique, Ireland is supporting the World Bank in assisting the Ministry for Industry and Commerce to improve the enabling environment for business by removing barriers to business activity. Similarly, Ireland has assisted the creation of an accountancy training body in Mozambique, in partnership with the Institute of Certified Public Accountants of Ireland, developing an essential human resource base for both the public and private sectors [SDG 8.3].

Ireland's support to vocational education in Uganda builds on our commitment to invest in skills development and employment opportunities for the growing youth population in Africa [SDG 8.6].

Ireland is committed to making a meaningful contribution to end Human Trafficking globally. Irish Aid has provided funding to ECPAT [End Child Prostitution and Trafficking [International]] since 2010. This work currently supports a project in Thailand which aims to enhance effectiveness in combating sexual exploitation of children through an expanded and stronger network based on a multi-stakeholder and multi-sectoral approach. We also support missionary orders in Africa, Asia and South America, many of whom have a long-term commitment to work against human trafficking [SDG 8.7].

In June 2017, Ireland was elected to the Governing Body of the ILO as a full member in Geneva for a three year term. It is the first time Ireland has been a full member of the Governing Body of the ILO since joining the Organisation in 1923. Ireland will use this platform to positively influence international labour law [SDG 8.8].

Goal 9: Industry, Innovation, Infrastructure

The EU SDG indicators for Goal 9 focus mainly on R&D levels and other knowledge intensive sectors in Member States and consider sustainable infrastructure from the perspective of transport.

As a percentage of GDP, Ireland's **gross domestic expenditure on R&D** is below the EU average for 2017, but this must be considered in light of the limitations of using GDP to measure Irish economic activity [see discussion under SDG8]. The Irish rate of **employment in high- and medium-high technology manufacturing sectors and knowledge-intensive service sectors** and the number of **R&D personnel as a percentage of the total workforce**, are both above the EU average. On a per capita basis, Irish **patent applications to the European Patent Office [EPO]** were below the EU average. However the EU average is impacted by the large numbers of applications from more industrially orientated Member States. The latest Eurostat figures show that in 2014 Ireland was ranked **11th out of the EU-28 in terms of number of patent applications to the EPO per millions of population**. **Collective transport modes** [buses, coaches, trains, excluding trams] **account for a share of total [Irish] passenger land transport above the EU average**. However Ireland's **share of rail and inland waterways activity as a percentage of total freight transport** is extremely low relative to other EU countries.

Innovation 2020 is Ireland's strategy for research and development, science and technology. A key target in the strategy is a commitment to increase public and private investment in research to reach Ireland's intensity target of 2.5% of GNP by 2020 [**SDG 9.5.1**]. Ireland's R&D intensity rate was 1.52% of GNP in 2015 and 1.43% in 2016. The fall back is due to Ireland's significant GDP/GNP growth in 2015 of 26.3%/18.7%. Public Expenditure on R&D increased from €727 million in 2014 to an estimated €768 million in 2017, the highest since 2011. A further target in the strategy is to increase the number of research personnel in enterprise from 25,000 in 2013 to 40,000 by 2020 [**SDG 9.5.2**]. The most recent figures show there were 26,336 personnel in enterprise in 2015.

Innovation 2020 also commits to adopting a challenge-centric approach by focusing on research that has the potential to address national and global challenges.

Research Prioritisation was introduced in 2012 to align the majority of competitively awarded public research funding with areas that deliver economic and societal impact. Innovation 2020 contains a commitment to review and refresh the priority areas in the light of changed circumstances, taking into consideration recent and likely future advances in science and technology. A key criterion in determining the priority areas is that the area represents an appropriate approach to a recognised national challenge and/or a global challenge to which Ireland should respond.

A comprehensive review of the themes and priority areas was undertaken and published in March 2018. The refreshed priority areas that have regard to the SDGs include Health and Well-being; Energy, Climate Action and Sustainability; and Smart and Sustainable Food Production [**SDG 9.5**].

As a small, open economy, Ireland relies on external demand and international markets for sustainable and continued growth. The market for innovation and research is also global – international cooperation in research and innovation plays an important role in the development and sustainability of a world-class innovation and research system.

One of the main priorities of Innovation 2020, is to continue to facilitate, develop and exploit global research cooperation, and to strengthen our networks with global partners to seek solutions to shared societal problems and to pursue innovation for economic and social development. Ireland's membership of several key International Research Organisations supports this aim.

Our current engagement at EU level focuses on maximising Irish participation in the EU's Horizon 2020 programme and our involvement in the European Research Area. Ireland will participate in negotiations for the successor programme to Horizon 2020, Framework Programme 9 and has indicated in advance that the SDGs should be adopted as the preferred framework for selecting missions.

We also have bilateral intergovernmental agreements with a number of countries, and Ireland's embassy network will continue to seek opportunities for cooperation with third countries, particularly those with strong education and research links to Ireland.

Enterprise 2025 Renewed, Ireland's national enterprise strategy, has a strategic vision for Ireland to be the best place to succeed in business delivering sustainable employment and higher standards of living for all. The strategy aims, inter alia, to increase the number of Irish owned companies and increase the level of indigenous Irish exports, as well as increasing the share of indigenous export to markets other than the United Kingdom. The focus is on supporting the productive sector, enhancing Ireland's relative competitiveness, leveraging existing comparative advantage in key sectors, addressing structural issues in the economy, improving productivity and our capacity to innovate. **[SDG 9.2]**

Enterprise Ireland is the Irish Government agency responsible for support of indigenous exporting companies. The creation of jobs in clients of the agencies has been crucial, as the success of these companies has a large multiplier effect, which leads to additional domestic market jobs creation in other sectors such as construction, retail, food and beverage, professional services, etc.

The **Strategic Banking Corporation of Ireland [SBCI]** was launched in 2014 to to ensure access to flexible funding for Irish SMEs by facilitating the provision of:

- ▶ Flexible products with longer maturity and capital repayment flexibility, subject to credit approval;
- ▶ Lower cost funding to financial institutions, the benefit of which is passed on to SMEs;
- ▶ Market access for new entrants to the SME lending market, creating real competition.

SCBI funding is available to SMEs through both bank and non-bank specialist on-lenders.

The release of long-term funds by promotional [or state-backed] financial institutions, through frontline [or traditional] finance providers, is a successful and effective model for funding SMEs throughout Europe.

The SBCI is currently working with non-bank financial institutions [such as leasing and invoice discounting providers] to expand the range of products available for the Irish SME sector in order to deliver choice and competition [SDG 9.3].

Ireland's latest **NDP was launched in February 2018 and** sets out the investment priorities for the next decade. This will guide national, regional and local planning and investment decisions in Ireland over the next two decades to cater for an expected population increase of over 1 million people. The NDP demonstrates the Government's commitment to meeting Ireland's infrastructure and investment needs over the next ten years, through a total **investment estimated at €116 billion** over the period. This represents a very substantial commitment of resources and is expected to move Ireland close to the top of the international league table for public investment. The NDP takes account of the social, economic, and environmental requirements of and for capital investment in Ireland through 10 National strategic outcomes [SDG 9.1, 9.4].

Supporting the SDGs Globally

In adopting the **National Plan on Business and Human Rights** in 2017, Ireland seeks to ensure that Irish businesses adhere to and promote human rights in their national and international operations including in developing countries. In the Irish Aid programme, there is increasing recognition of the need to ensure that sustainable industrialisation and the fostering of innovation are inclusive processes [SDG 9.1].

In Kenya, Ireland is providing support to the Kenyan investment agency, KenInvest, to establish a One Stop Centre for Foreign Direct Investment, a key industrialisation priority for the Kenyan Government. Key activities include the establishment of the One Stop Centre systems, a change management programme, and technical support to develop sector profiles for potential investors [SDG 9.2].

Ireland supports the ILO to provide technical support to partner governments to incorporate local employment generation as an objective within public expenditure programmes. Linked across SDG 8 and SDG 9, it also supports reform of investment policies, public procurement policies and the legal framework to increase participation of small scale enterprises and communities in the infrastructure delivery [SDG 9.3].

Irish Aid is known for investing in innovation through piloting new initiatives and through its research. Our Research Strategy emphasises the need to build the capacity to plan for, conduct and apply development research in key partner countries, and particularly through north-south research partnerships. Ireland's support to five Product Development Partnerships [PDPs] is leading to the development of new products to prevent HIV transmission and drugs to treat severe malaria and drug resistant tuberculosis. PDPs enhance scientific research, upgrade technological capabilities and increase the number of R&D workers in partnership with national research institutions and the private sector in developing health products, drugs and vaccines [SDG 9.5].

Goal 10: Reduce inequality within and among countries

The EU SDG indicators mainly focus on the level of economic variation between EU countries and also within those countries. Ireland's results relative to the rest of the EU are mixed with 2016 **purchasing power adjusted GDP per capita** in Ireland significantly above the EU average while Ireland's **adjusted gross disposable income of households per capita** is below the EU average. These differing results are likely in part a consequence of the significant level of inward investment in Ireland by multinational enterprises, whose income increases GDP but is not reflected in gross household disposable income. In addition, the household income data is from 2015 and does not reflect the impacts of ongoing economic recovery in subsequent years. More recent data may see this disparity narrowing. Internally, in terms of economic inequality, Ireland performs marginally better than the EU average measured by **relative median at-risk-of-poverty gap**, **Gini coefficient of equivalised disposable income**, and **income share of the bottom 40% of the population**. Relative to other EU Member States, Ireland has received relatively few **first-time extra-EU-28 asylum applications** but both applications and **accepted applications** increased in 2016 compared to 2011 levels.

In relation to the economic inequality and social exclusion, a successor to the current **NAP Inclusion** is being developed at present. It is proposed that the new plan will be for the four year period 2018-2021. The primary focus of the plan will be the reduction of consistent poverty: improved/supported incomes to reduce the percentage of the population at-risk-of-poverty [below 60% of the median income] and increased access to quality services to reduce the percentage of the population experiencing deprivation and reduce the risk of poverty development [intergenerational poverty] [**SDG 10.1, 10.4**].

The EU indicators do not address the policy frameworks which address social, and political exclusion in Ireland. These would include the **National Strategy for Women and Girls**, the **National Disability Inclusion Strategy**, the **National Traveller and Roma Inclusion Strategy** and **Migrant Integration Strategy**. In 2015 Ireland was the first country in the world to legalise marriage equality by way of popular vote, through a referendum which introduced the **34th Amendment of the Constitution of Ireland**. Ireland is also currently developing a **LGBTI+ National Youth Strategy**, and is the first country to do so. Furthermore, plans are underway to develop a **National LGBTI Inclusion Strategy** for all ages. The **Gender Recognition Act 2015** provides that a person can apply for a Gender Recognition Certificate in order to have their preferred gender recognised by the Irish State. The Gender Recognition Act allows all individuals over the age of 18 to self-declare their own gender identity [**SDG 10.2**].

In relation to legal frameworks the **Equal Status Acts 2000-2015** prohibit discrimination in the provision of goods and services, accommodation and education in Ireland. They cover the nine grounds of gender, marital status, family status, age disability, sexual orientation, race, religion, and membership of the Traveller community. In addition, the Acts prohibit discrimination in the provision of [housing] accommodation services against people who are in receipt of various social welfare payments. The Acts prohibit discrimination subject to some exemptions, in access to and use of goods and service, including indirect discrimination and discrimination by association, sexual harassment and harassment, and victimisation. The Acts allow positive action to promote equality for disadvantaged persons or to cater for the special needs of persons. Discriminatory advertising is also

prohibited. It is prohibited to publish, display or cause to be published or displayed, an advertisement which indicates an intention to discriminate, harass or sexually harass.

The **Employment Equality Acts 1998-2011**, on the basis of the nine grounds mentioned in the preceding paragraph, outlaw discrimination at work including in relation to recruitment and promotion, equal pay, working conditions, training or experience and dismissal, and harassment including sexual harassment [**SDG 10.3**].

The **Irish Human Rights and Equality Commission** is Ireland's national human rights and equality institution. The Commission is an independent public body that is accountable to the Oireachtas [Irish Parliament], with a mandate established under the **Irish Human Rights and Equality Commission Act 2014**. The Commission's purpose is to protect and promote human rights and equality in Ireland, and build a culture of respect for human rights, equality and intercultural understanding in the State.

The Commission has a range of powers and functions to support this mandate. In undertaking its mandate, the Commission is obliged by section 10[3] of the Act to exercise its functions with a view to encouraging and supporting the development of a society in which:

- ▶ there is respect for and protection of each person's human rights,
- ▶ there is respect for the dignity and worth of each person,
- ▶ a person's ability to achieve his or her potential is not limited by prejudice, discrimination, neglect or prohibited conduct,
- ▶ each person has a fair and equal opportunity to participate in the economic, political, social or cultural life of the State, and
- ▶ there is mutual respect between persons, including classes of persons, based on a shared understanding of the value of diversity within society and on a shared respect for equality and human rights.

In line with Ireland's international and humanitarian obligations, Ireland continues to pursue a migration policy that facilitates the orderly, safe, regular and responsible movement of people, taking into account Ireland's economic needs, and the global migration situation. Ireland continues to operate its immigration system at a national level, while taking into account best practice from our EU partners. Ireland offers a number of pathways to legal migration, including labour migration, education, family reunification and international protection. Ireland offers a number of different migration schemes under labour migration, including a skills based employment permit system, operated by the Department of Business, Enterprise and Innovation, and through bespoke schemes carried out by the Irish Naturalisation and Immigration Service, on behalf of the Minister for Justice and Equality.

Supporting the SDGs Globally

Our international development policy recognises that when economic growth is considered only in terms of increased GDP per capita, it can fail to account for trends in inequality within a country. Our approach to inclusive economic growth includes action in a number of areas including social protection, investment in agriculture, with a focus on staple crops and decent job creation in the industrial sector. Irish Aid is committed to working more strategically to advance sustainable and climate-sensitive economic growth that supports employment and incomes especially for those who most need it **[SDG 10.1]**.

Within our bilateral aid programmes efforts are underway to ensure that our programmes address growing inequality across and within countries. In reporting on SDG 5, we refer to Ireland's focus on inclusive economic growth for women. Ireland also works to empower and promote the social, economic and political inclusion of people with disabilities. For example, in Ethiopia through our support to the Ethiopian Centre for Disability and Development, Ireland supports inclusive vocational training and employment for persons with disabilities. In Vietnam, Ireland supports several civil society organisations that work with people with disabilities on social inclusion, empowerment, health and early childhood detection of disabilities, as well as mine-related risks. We also support work on issues relating to disability through civil society organisations such as Christian Blind Mission [CBM], Sightsavers, Plan Ireland and Misean Cara **[SDG 10.2]**.

The promotion and protection of LGBTI rights is a priority area for human rights advancement in Ireland's foreign policy and this commitment is reflected in The Global Island. Ireland is committed to promoting the rights of LGBTI individuals who continue to endure disproportionate levels of discrimination in many countries. This commitment is being delivered through our engagement at international human rights fora, notably at the UN and EU, and through our bilateral relations. We have strongly supported efforts to address this issue at the Human Rights Council and at the United National General Assembly Third Committee **[SDG 10.2]**.

Simon Coveney TD, Tánaiste and Minister for Foreign Affairs and Trade

Ireland promotes social protection as an important policy instrument to reduce poverty and inequality as well as for promoting gender equality, better nutrition, and improved education and health outcomes. We also recognise social protection as a key tool to enhance the social status and rights of the marginalised, promoting accountability and strengthening the citizen-government bond. We currently support six partner countries to put in place social protection systems **[SDG 10.4]**.

Through our membership of the International Monetary Fund and the World Bank Group Ireland advocates for the continuing increase in developing country representation within these institutions **[SDG 10.6]**.

Ireland is actively involved in discussions on international developments in migration policy, including the EU's ongoing response to the 2015 migration crisis and its aftermath, and the UN's Global Compact on Migration. Ireland operates free movement of people for European Economic Area [EEA] countries and Switzerland **[SDG 10.7]**.

Goal 11: Sustainable Cities and Communities

Looking only at the EU SDG indicators for SDG 11, Ireland's performance under this Goal would be considered positive overall. 2015 data suggests Ireland has the fourth lowest **rates of people living in overcrowded conditions** among EU Member States. Ireland also had the lowest **percentage of the population living in households which they considered to be suffering from noise pollution**, and the second best air quality in the EU as measured by **exposure to particulate matter**. **Municipal recycling rates** while still below the EU average, have increased significantly since 2000, and a significant drop in the level of deaths due to road traffic accidents between 2000-2015 has seen Ireland move from having an above the EU average number of road traffic deaths to having the sixth safest roads among Member States. The percentage of the Irish population which have **difficulty accessing public transport** is higher than the EU average but it should be noted that this is predominantly a reflection of the low population density in rural areas, as populations in Irish towns and cities report levels of access higher than the respective EU averages.

However, the EU SDG indicators do not fully capture the pressures on housing supply, which is particularly evident in Dublin and other cities, and the consequent increasing house prices and rents and the high incidence of homelessness in Ireland which the current Government has acknowledged as one of the most pressing challenges currently facing Ireland. As of March 2018, official figures indicate that 9,781 people were homeless and accessing emergency accommodation through local government authorities. Approximately 38% of this homeless population are children. These figures do not include 'rough sleepers'.

Current housing pressures in Ireland arise in part as a result of the collapse of housing construction levels in the aftermath of the economic downturn. Annual housing output dropped from a high of over 93,000 new homes in 2006 to less than 9,000 in 2011, and as the economic has recovered, there is now significant pent-up demand due to years of under-supply, as well as a fast-growing young population and economic recovery. In 2016 Government launched its **Action Plan on Housing and Homelessness Rebuilding Ireland [SDG 11.1]**, which is designed to accelerate housing supply across all tenures. The Action Plan targets doubling the annual level of residential construction to 25,000 homes by 2020 and delivering 50,000 social housing homes in the 6-year period to 2021, involving direct Government expenditure of almost €7bn. Furthermore, the **NDP** provides for this commitment to social housing to be extended further, with a total of €11.6 billion provided over the period 2018-2027, so that 112,000 households can have their housing needs met in a social housing home over this period.

The Action Plan has five main 'Pillars' to address specific challenges through a cross-cutting and interlinked way:

Pillar 1 – Address Homelessness

Provide early solutions to address the unacceptable level of families in emergency accommodation; deliver inter-agency supports for people who are currently homeless, with a particular emphasis on minimising the incidence of rough sleeping, and enhance State supports to keep people in their own homes.

Pillar 2 – Accelerate Social Housing

Increase the level and speed of delivery of social housing and other State-supported housing.

Pillar 3 – Build More Homes

Increase the output of private housing to meet demand at affordable prices by providing enabling infrastructure up front to accelerate development of major sites, streamline planning, and provide more flexible guidance, particularly for city centre living.

Pillar 4 – Improve the Rental Sector

Address the obstacles to greater private rented sector delivery, to improve the supply of units at affordable rents, and strengthen the protections for both tenants and landlords.

Pillar 5 – Utilise Existing Housing

Ensure that existing housing stock is used to the maximum degree possible – focusing on measures to use vacant stock to rejuvenate both urban and rural areas.

As implementation of the Action Plan has evolved to incorporate new initiatives and commitments, progress is being tracked across some 185 actions under these five pillars through quarterly status reports. Progress included in the Q4 2017 status report included:

- ▶ Almost 26,000 households had their social housing needs met, equivalent to 100 new households had their social housing need met each working day of the week.
- ▶ 4,000 individuals exited homelessness into homes.
- ▶ 200 additional permanent beds were provided for rough sleepers.
- ▶ Over 7,000 new homes were brought into the active social housing stock through build, acquisitions, voids and leasing programmes. This is a 40% increase [almost 2,000 new homes] on what was planned for the year, and 24% of an increase over what was achieved in 2016.
- ▶ Almost €200m investment in enabling infrastructure across 30 major sites, most in and around our cities, which have the potential to accelerate the delivery of some 20,000 new homes over the next 4 years.
- ▶ Rent Pressure Zones introduced in all cities which limits the annual rent increases to a maximum of 4%, providing greater rent predictability.
- ▶ Targeted actions to bring vacant homes in cities and towns back into use, as a key catalyst for urban regeneration and supporting communities.

In Q4 2017, Ireland's social housing construction programme included some 13,400 homes at various stages of planning, design and procurement, this a substantial increase on the 8,430 homes in the programme in Q4 2016.

Irish public transport services which are socially necessary but financially unviable are subsidised by the taxpayer through **Public Service Obligation [PSO] funding**. There is specific provision to address social exclusion in Irish rural areas arising from unmet public transport needs through the **Rural Transport Programme [RTP]**. The objective is to provide a quality nationwide community based public transport system in rural Ireland which responds to local need. The RTP has been consolidated through a streamlined network of 17 offices. This local presence and on-the-ground knowledge facilitates direct engagement

with service users and other stakeholders at a local level. All Locallink offices have been engaged in a process to establish the unmet demand in their area. New regular commuter bus services were developed in 2016 and 2017 under the RTP.

Public transport accessibility is addressed through Ireland's **Sectoral Plan for Accessible Transport 'Transport Access for All'**. This policy is based on the provisions of the **Disability Act 2005** and related Government strategies, for example the **Comprehensive Employment Strategy** and in particular the **National Disability Inclusion Strategy [NDIS] 2017-2021**. Accessibility features, such as wheelchair accessibility and audio/visual aids, are built into all new public transport infrastructure projects and vehicles from the design stage. For example Dublin's Light Rail system, known as the Luas, is fully accessible. 100% of the Dublin Bus and Bus Éireann city fleets are wheelchair accessible, as well as approximately 80% of the Bus Éireann coach fleet and this will increase as the coach fleet is replaced. Other measures to assist people with disabilities using public transport include the provision of Real Time Passenger Information on the web, by app and electronic displays at bus stops, improved functionality and availability of the Leap Card and the development of the step free journey planner. Department of Transport, Tourism and Sport also funds a programme of retro-fitting older, existing, public transport infrastructure and facilities to improve their accessibility feature **[SDG11.2]**.

The **NDP** provides for some €8.6bn in capital funding for public transport projects over the next decade.

In tandem with the NDP, in February 2018 Ireland launched its new NPF which will guide at a high-level strategic planning and development for the country over the next 20+ years, so that as the population grows, that growth is sustainable [in economic, social and environmental terms]. The NPF references the SDGs directly **[SDG 11.3, 11.7, 11.a, 11.b]**

The ultimate objectives of the NPF are to:

- ▶ Guide the future development of Ireland, taking into account a projected 1 million increase in our population, the need to create 660,000 additional jobs to achieve full employment and a need for 550,000 more homes by 2040;
- ▶ Enable people to live closer to where they work, moving away from the current unsustainable trends of increased commuting;
- ▶ Regenerate rural Ireland by promoting environmentally sustainable growth patterns;
- ▶ Plan for and implement a better distribution of regional growth, in terms of jobs and prosperity;
- ▶ Transform settlements of all sizes through imaginative urban regeneration and bring life/jobs back into cities, towns and villages;
- ▶ Coordinate delivery of infrastructure and services in tandem with growth, through joined-up NPF/National Investment Plan and consistent sectoral plans, which will help to manage this growth and tackle congestion and quality of life issues in Dublin and elsewhere.

A key focus within the NPF is to deliver more compact growth, particularly within the existing fabric and footprint of our cities. It is targeted that 25% of the predicted population growth [and consequent jobs] will be facilitated in Dublin, with over half that growth being delivered through brownfield urban regeneration, and another 250,000

people in total to be accommodated in the other four cities of Cork, Limerick, Galway and Waterford. The coordinated alignment of the NDP with the NPF will provide greater opportunities for better investment, infrastructure and service delivery to ensure that new communities within our urban areas are better integrated and have timely access to services. A key focus of the NPF is to improve citizens' quality of life through better place-making in terms of design, amenity and public space and encouraging more active and sustainable lifestyles.

Regarding the environmental impact of its cities, Ireland in 2018 will adopt its first **National Clean Air Strategy** to further reduce air pollution, which will positively impact on both human health and the environment. Ireland has a well established waste management policy in place since 2012, **A Resource Opportunity Waste Management Policy in Ireland** and as indicated, municipal recycling rates in Ireland are increasingly coming into line with EU averages [SDG 11.6].

Ireland also has specific policies in place to protect and safeguard cultural heritage as a national resource [SDG 11.4] and to make cities, towns and related settlements inclusive, safe, resilient and sustainable. These include heritage-led regeneration strategies for the sustainable development of historic towns, cities and places such as the **Living City Initiative** and the **Historic Towns Initiative**. The Department of Culture, Heritage and the Gaeltacht is preparing a **climate change adaptation plan for the heritage sector** and has published **guidance on enhancing the energy efficiency of traditional buildings** and on the adaptation and reuse of the historic built environment. Other initiatives include promoting the development of traditional building skills; providing funding for conservation and repair works to historic buildings; and supporting the work of other bodies involved in built heritage both within government and NGOs. Two new policy documents are currently in preparation within 2018: the **National Policy on Architecture** and the **National Heritage Plan**.

Supporting the SDGs Globally

The United Nations Economic Commission for Europe [UNECE] has adopted the Framework Guidelines for Energy Efficiency Standards in Buildings to provide a concrete path toward massive reductions in the greenhouse gas emissions caused by buildings. In 2017 Ireland signed a letter of intention with UNECE to establish a UNECE Centre of Excellence for High Performance Buildings in Wexford in Ireland. Participants in the Irish centre will be part of a global network of UNECE Centres of Excellence that will both serve the regions in which they are located and comprise a global constituency, providing diverse skills, knowledge and experience, including expertise in high performance building design, materials, technologies, and systems, as well as construction, commissioning, operation, maintenance and continuous performance improvement.

Goal 12: Responsible Consumption and Production

The EU SDG indicators for Goal 12 focus on the decoupling of environment impacts from economic growth, energy consumption and waste management. Ireland's **resource productivity**, increase substantially between 2001 and 2016, during which period it reached and exceeded the EU average. Ireland was among a number of EU countries which saw the **volume of freight transport relative to GDP between 2010 and 2015**, while total traffic volume was increasing. While this could suggest an absolute decoupling of transport from economic activities [for example due to the high level of service provision with the Irish economy] the caveats regarding GDP as a measure of economic activity in Ireland discussed under SDG 8 continue to apply. **Average CO₂ emissions per km from new passenger cars** were also below the EU average for Ireland in 2016, suggesting Irish motorists are switching to lower emission vehicles. In terms of **generation of waste excluding major mineral wastes** Ireland was below the EU average but at a higher level than a decade previously. This is in contrast to the experience of the majority of EU states. The Irish **recycling rate of waste excluding major mineral wastes** increased in the period between 2010 and 2014 but needs to increase further to meet the EU average.

Ireland's overall policy in relation to sustainable development **Our Sustainable Future**, is the latest in a series of such national policies dating back to 1997, while the overall themes and objectives of Our Sustainable Future align well with the SDGs, Ireland intends to produce a new sustainable development policy which formally incorporates the SDGs.

National waste policy is set out in detail in **A Resource Opportunity 2012**. This sets out the measures through which Ireland will become a society that prioritises waste prevention and management in a way that is compatible with the protection of our environment. It provides a roadmap on how Ireland will reduce its dependency on landfill, by putting in place appropriate measures and approaches to reduce waste, while at the same time making the most of opportunities to recover resources from waste [**SDG 12.1, 12.2, 12.5**].

Ireland's waste policy is evolving progressively from waste disposal and management to improving our resource efficiency and ultimately making a transition to a circular economy. For the period to 2030 at least, Ireland's waste policy will further evolve in the context of a negotiated EU agreement based on the European Commission's 'Closing the Loop – An Action Plan for the Circular Economy'.

In particular, Ireland's performance in this area centres around meeting various EU targets for the diversion, recovery and recycling of waste. The Environmental Protection Agency [EPA] monitors and reports on national performance.

A number of specific measures demonstrate Ireland's approach to meeting SDG 12 and related Goals:

Ireland has operated a national waste prevention programme since 2004. The EPA is funded from a ring fenced fund of revenues derived from green taxes and charges [**the National Environment Fund**] to run a series of sub-programmes designed to support waste prevention by individuals, communities and businesses. These include supports such as **Green Business, Green Healthcare, Stop Food Waste, Green Enterprise and Smart Farming**.

Since publication of A Resource Opportunity in 2012, Ireland has developed a **food waste prevention** strategy that reflects the increasing interest in the issue at a global and national level. In addition to supporting the EPA's Stop Food Waste work with communities, further resources are being provided to expand the EPA's programme with business via the **Food Waste Charter**. In 2017, a **Retail Action Group on Preventing Food Waste in the Supply Chain** was established by the Minister. Representing the majority of large grocery retailers, the Group has agreed on the principle and process for gathering food waste data within their organisations. Accurate data is recognised as the basis for meaningful action on preventing waste. Ireland is also participating fully at EU fora on food waste prevention [SDG 12.3].

Green Tenders – An Action Plan for Green Public Procurement is the national policy statement regarding green public procurement and was launched in 2012. Its objective is to assist public authorities to plan and implement green procurement. In 2014, the EPA produced **Green Procurement – Guidance for the Public Sector**. A key target of the Plan is that 50% of public procurement should conform to green criteria, both by cost and by the number of tenders awarded. As a member of the EU with a record of high compliance with EU directives, much of Ireland's procurement is thought to already qualify as 'green' given the high threshold of environmental protection within the EU legislative body. That being said precise evidence for Ireland's performance in implementing Green Public Procurement [GPP] is not adequate currently [SDG 12.7].

It has long been recognised that policies consistent with the polluter-pays-principle are most likely to yield positive results when it comes to protection of the environment. In 2017, household waste collectors were required to begin the process of phasing out flat rate fees. Instead, householders are being switched progressively to payment plans that incentivise waste reduction and segregation.

Working with local authorities and their regional counterparts, the Department of Communications, Climate Action and Environment has developed a number of public education and awareness campaigns around waste prevention, segregation and recycling in 2017 and 2018.

The principal Producer Responsibility Initiatives operating in Ireland relate to **Waste Electrical and Electronic Equipment, batteries, packaging, end-of-life vehicles, tyres and farm plastics**. These schemes have been critical to Ireland reaching recycling targets and have contributed to diverting substantial amounts of resources from landfill.

Ireland's **Second National Action Plan on Corporate Social Responsibility 2017-2020** was launched in June 2017 [SDG 12.6]. The vision of the Plan is that 'Ireland will be recognised as a Centre of Excellence for responsible and sustainable business practice through the adoption and implementation of best practice in CSR in enterprises and organisations'. The Plan was developed by Ireland's Department of Business, Enterprise and Innovation, in consultation with the public and private sector stakeholders, against the backdrop of the SDGs. The plan is divided into four core dimensions which are strategically linked to specific SDGs. The new plan contains 17 actions under the four core dimensions.

Table 4.1: Second National Action Plan on Corporate Social Responsibility - Core Dimensions

| CSR Dimensions | SDG |
|-----------------|----------|
| The Workplace | 5,8,10 |
| The Marketplace | 8,9,12 |
| The Environment | 11,12,13 |
| The Community | 3,8,11 |

The Plan encourages industry to set business strategies that take account of and positively influence the way in which their business impacts in the marketplace, workplace, community and the environment and will support the creation of a business environment that is comprehensively sustainable.

A number of actions in the CSR National Plan support Goal 12.6, as set out below:

Table 4.2: Actions from the CSR National Plan supporting SDG 12.6

| | |
|----|---|
| 4 | Continue to increase awareness of CSR, its value to businesses and to society as a whole. |
| 9 | Encourage more micro, small and medium-sized enterprises to raise their competitiveness through improved CSR engagement. |
| 10 | Work to increase recognition among large businesses of the value of sustainable business practices and corporate social responsibility in boosting employment, attracting and retaining talent and their impact on wider society, including reporting on CSR/responsible business practices. |
| 15 | Work to increase the recognition of the impact of business operations on the environment and to encourage businesses to mitigate their negative impacts by: <ul style="list-style-type: none"> ▶ Supporting and promoting environmental policy; ▶ Encouraging businesses to implement resource efficiencies; and ▶ Promoting the European Commission’s Circular Economy. |

The Department of Business, Enterprise and Innovation leads on driving the national CSR agenda as outlined in the Plan. The CSR Stakeholder Forum established in 2014 is a key delivery agent in implementing the actions under the Second National CSR Plan. Membership of the Forum comprises representatives of the business community, key Government Departments and agencies and the wider community.

Ireland’s management of chemicals is primarily through the framework of EU regulations. The **Chemical Act 2008** facilitates enforcement of the EU Reach Regulation in Ireland, as well as aspects of the detergents regulation and the Rotterdam Regulation concerning the Rotterdam Convention [SDG12. 4].

Supporting the SDGs Globally

On responsible and sustainable food consumption, Ireland is supporting FAO's Global Initiative on Food Loss and Waste Reduction initiative. This multi-stakeholder programme facilitates dialogue between industry, research, politics, and civil society on food losses. Key aspects to this programme include: **awareness raising** on the impact of, and solutions for food loss and waste; **collaboration** and coordination of world-wide initiatives on food loss and waste reduction and support to **policy, strategy and programme development** for food loss and waste reduction [SDG 12.3].

Ireland is also a contributor to both the Global Environment Fund [GEF] and the Environment Fund of the UN Environment Programme [UNEP], both of which support, inter alia, sustainability projects globally.

Goal 13: Take urgent action to combat climate change and its impacts

The EU's SDG indicators for Goal 13 address Climate mitigation as well as Climate Impacts. Ireland's Greenhouse gas emissions peaked in 2001 at 71.39 Mt CO₂ equivalent, compared to estimated emissions for 2015 at 59.88 Mt CO₂ equivalent. This downward trend has closely tracked activity in the economy, with emissions falling in parallel with the most recent economic downturn, and emissions are again now increasing across all sectors in line with economic and employment growth, particularly in the transport sector. Significant economic and population growth since 1990 [the Irish population has grown by approximately 30% in the period] has seen total emissions remain above 1990 levels, at just above 109% in 2015. Ireland has achieved significant reductions in CO₂ equivalent emissions on a per capita basis, with tonnes per capita reduced to 13.3 in 2015 compared to 18.6 in 2000. However Irish emissions per capita remained above the EU-28 2015 average of 8.7 tonnes per capita. Ireland has reduced the Greenhouse gas emissions intensity of energy consumption in 2015 compared to 2000 by marginally more than the EU average. In terms of climate impacts, EU data indicates that Ireland has experienced climate-related economic losses above the EU average in the period 1980 to 2015. It should be noted that data for this indicator is limited and that it is not generally possible to attribute individual extreme weather events to climate change. However, statistical attribution studies have shown that various climate extremes in Europe and beyond have become stronger and/or more frequent as a result of global climate change. Ireland is also engaged with global climate initiatives with its 2014 and 2015 contributions to the 100 billion international commitment on climate-related expenditure amounting to some €44million and €36 million respectively. The proportion of Ireland's population covered by the Covenant of Mayors for Climate and Energy in 2016 was also above the EU average.

The EU committed to reducing its emissions by 20% compared with 1990 levels, and in this regard established binding annual greenhouse gas emissions targets for its Member States for the period 2013 to 2020. For the year 2020 itself, the target set for Ireland is that emissions should be 20% below their level in 2005. Ireland faces a shortfall in achieving this target in 2020, with projected emission levels at that stage expected to represent a 4-6% reduction. This reflects both the constrained investment capacity over the past decade due to the economic crisis, and the extremely challenging nature of the target itself. Ireland's 2020 target is a binding obligation under EU law. Ireland is projected to comply with its emissions reduction targets in each of the years 2013 to 2018 but to exceed its targets in 2019 and 2020, which will result in a requirement to purchase compliance under the EU legislative framework.

Climate change is one of the biggest global challenges of our time. Its scale and complexity demands a coordinated approach at both national and international levels. As a party to the UNFCCC, Ireland is committed to concerted multilateral action to tackle climate change through the Paris Agreement. Ireland contributes to the goals of the Paris Agreement through its engagement as part of the overall EU strategy to reduce emissions. The strength of Ireland's commitment to meeting the challenge is reflected also in Ireland's **National Policy Position on Climate Action and Low Carbon Development [2014]** and **the Climate Action and Low Carbon Development Act, 2015**, as well as the **first National Mitigation Plan [2017] [SDG 13.2]**.

The National Policy Position on Climate established a commitment to deep decarbonisation of the economy by 2050, and the 2015 legislation provides the enabling statutory framework for this to happen. Ireland also recognises that, as part of the ongoing evolution of international climate change policy, the objectives set out in the National Policy Position will, in time, require review to ensure coherence with the Paris Agreement.

The National Mitigation Plan [NMP], published in July 2017, sets out this Government's collective approach to reducing Ireland's greenhouse gas emissions. The NMP covers greenhouse gas emissions in the Electricity Generation, Built Environment, Transport, and Agriculture, Forest and Land Use sectors. For each sector, the Plan sets out the policy context, the greenhouse gas emissions trends, the opportunities and challenges, the mitigation measures currently in place and under development, and specific actions to take forward.

The Plan contains over 70 mitigation measures and 106 related actions for various Ministers and public bodies to take forward as we move through the implementation phase of what will be a living document. These measures and actions will address the immediate challenge to 2020 and provide a framework for the development and implementation of medium to long-term options to reduce greenhouse gas emissions and progress the overall National Policy Position for 2050. The actions under each measure in the NMP will contribute towards achieving many of the SDGs, having particular correspondence with SDG 13.2.

This first NMP does not represent a complete roadmap to achieve the 2050 objective, but rather is a work in progress reflecting the reality of where we are in our decarbonisation transition. It represents the first in what will be a series of strong roadmaps for action across all sectors to make progress towards Ireland's national transition objective.

Importantly, as the NMP is a living document, it will be updated as ongoing analysis, dialogue and technological innovation generate more and more cost-effective sectoral mitigation options. This continuous review process reflects the broad and evolving nature of the sectoral challenges outlined in the Plan, coupled with the continued development and deployment of emerging low carbon and cost effective technologies across different sectors of the economy.

A significant number of measures included in the NMP have already been implemented to reduce greenhouse gas emissions across the economy and continuous work will take place to make further progress towards achieving the national objective of transitioning to a competitive, low carbon, climate resilient and environmentally sustainable economy by 2050.

The National Planning Framework [NPF], announced by Government in February 2018, will address a broad range of issues in relation to planning for a sustainable future for Ireland over the period to 2040. The Framework aims to coordinate key areas such as housing, jobs, health, transport environment, energy and communications into an overall coherent strategy. In conjunction with the NPF, the Government adopted the NDP 2018-2027, which provides for €116 billion in capital investment over the next 10 years. The NPF and the NDP are fully integrated and are collectively referred to as Project Ireland 2040. Transition to a Low Carbon and Climate Resilient Society is one of the 10 strategic objectives of Project Ireland 2040, and accounts for the largest single portion of capital investment under the NDP, with €21.8 billion allocated for projects related to carbon emission reduction, including through upgrading 45,000 homes per annum from 2021, providing an additional 3,000-4,500 MW of renewable energy, increasing support for renewable heat schemes, transitioning to low emission, including electric, buses for the urban bus fleet, and targeting just under half of our vehicle fleet to be fully electric by 2030. A new €500m Climate Action Fund will leverage further investment by public and private bodies, with a strong focus on interventions in the transport sector. There will also be substantial further investment in flood relief schemes to minimise the impact of river and coastal flooding [**SDG 13.1 and 13.2**]. This level of capital investment will represent a step-change in Ireland's delivery of climate-action objectives.

Text box 4.6

Decarbonising the Transport Sector

Alternative fuels have a strong potential to contribute towards the decarbonisation of the transport sector; currently the transport sector in Europe is almost entirely dependent on oil. Ireland published the *National Policy Framework on Alternative Fuels Infrastructure for Transport in Ireland 2017-2030* in May 2017 with the aim to support the advancement of refuelling and recharging infrastructure ensuring that infrastructural barriers to low emitting vehicle market uptake are removed. It is expected that the Framework will reassure car manufacturers and investors of the long-term commitment of the State to alternative fuels and promote greater private investment and developments.

Under a commitment within the *Programme for a Partnership Government* a **Low Emission Vehicle [LEV] Taskforce** was established to consider the full suite of potential measures available to Government to expedite the deployment of low carbon technologies. The Taskforce is considering a wide range of measures to stimulate the Electric Vehicle [EV] market, including: reduced charges or exemptions on toll roads for EVs; benefit-in-kind relief; EV public parking charges; current public procurement policy; purchase grants for the small public service vehicle fleet; and reviewing the effectiveness of current incentives in place.

Irish **vehicles registration and motor taxation systems** were changed in July 2008 to be based on CO₂ emissions rather than engine size. The tax changes, which applied to vehicles purchased in 2008 or later, had an immediate and substantial positive effect in changing buyer behaviour encouraging the take up of low CO₂ emission vehicles. Initially, vehicles were categorised into seven graduating bands, A to G, with those choosing to purchase lower-emission vehicles paying less in Vehicle Registration Tax [VRT] and motor tax. A zero emissions band for electric vehicles was also introduced for motor tax purposes only. There has been a marked change in the proportion of new cars purchased within the lower emission bands; new private cars sold in the 'A' emission band rose from just 1.5% in 2007 to 78% in 2016. Cars with CO₂ emissions of 140 g/km or higher now comprise just 4% of new car purchases. Rebalancing the motor tax and VRT regimes has ensured that technological improvements are impacting more rapidly on the composition of the car and van fleet compared to an alternative taxation system based on engine size. The net effect has been to accelerate the reduction of carbon emissions within the national fleet and significant fuel and energy savings over the lifetime of each vehicle. This measure has been considered a very effective means of influencing purchasing decisions by motorists in favour of more fuel efficient vehicles.

The EU, through Regulations [EC] 443/2009 and [EC] 333/2014, mandated an improvement in average new car efficiency to 130g CO₂/km by 2015 with a target of 95g CO₂/km for 2020. Successful Irish implementation of these regulations is fundamental in moving the transport sector towards decarbonisation, particularly up to 2030. This measure has greatly increased the availability of lower emission vehicles in the Irish market. New cars entering the fleet are now approximately 25% more energy efficient than they were in 2007. Emissions from new cars sold in Ireland fell from 164g CO₂/km in 2007 to c. 116g CO₂/km by 2015. Ireland is ahead of both the EU target of 130g CO₂/km and the average emissions from new car sales in many other EU Member States.

A number of energy efficiency actions are also underway in the public transport fleets such as the sole procurement of all new public transport vehicles to the highest EURO class standard available. Service providers/operators continue to improve energy efficiency through adopting various technological solutions and instigating driver behaviour change programmes. There are co-benefits of improving energy efficiency including increased fuel economy, consequential emission reductions and enhanced air quality. Examples include train configuration changes and eco-driving initiatives.

Ireland's first statutory **National Adaptation Framework** [NAF] was published in 19 January 2018. The NAF sets out the national strategy to reduce the vulnerability of the country to the negative effects of climate change and to avail of positive impacts. The NAF was developed under the Climate Action and Low Carbon Development Act 2015 [SDG 13.1].

Ireland's **National Dialogue on Climate Action** was launched in March 2017. This is in line with the commitment set out in the Programme for a Partnership Government [SDG 13.3] The primary objective of the Dialogue is to ensure an inclusive process of engagement and consensus building across society towards enabling the transformation to a low carbon and climate-resilient future.

To do this, the Dialogue will seek to create awareness, engagement and motivation to act [locally, regionally and nationally] in relation to the challenges presented by climate change and to establish, on a long-term basis, appropriate networks for people to meet periodically to consider evidence-based inputs on the economic, social, behavioural, environmental and public aspects of climate and energy policy. A correlation may be drawn between these objectives and the SDG ambition for increased education, awareness-raising and human and institutional capacity on climate change mitigation.

National Dialogue initiatives already announced consist of:

- ▶ The Green Schools National Climate Change Action and Awareness Programme, which includes the National Climate Ambassador Programme; Climate Action Week between 16 and 20 October 2017; and the Green Schools Climate Expo on 22 February 2018; and
- ▶ A series of lectures on key policy issues.

Supporting the SDGs Globally

Ireland's work on climate action supports our overall international development objectives, to ensure that climate change does not undermine Ireland's efforts in poverty eradication, nor reverse previously hard-won development gains addressing climate change. Both *One World One Future* and *The Global Island* characterise climate change as a global environmental, development and security challenge, exacerbating tensions over land, water, food and energy, creating migratory pressures, threatening food and nutrition security and undermining public health. In agreeing the 2030 Agenda for Sustainable Development, world leaders committed to implement the Agenda for the full benefit of all, for today's generation and for future generations. In our global response to climate change, the Department of Foreign Affairs and Trade through Irish Aid works closely with the Mary Robinson Foundation and other partners to advocate that responses to climate change take account of the impacts on future generations.

Text Box 4.7

Our Work in Climate

1. Ensure climate change does not undermine Ireland's efforts in poverty eradication, through integrating **climate consideration** across our Development Cooperation Programme/Irish Aid.

2. Support vulnerable countries to devise effective **Climate Action Plans**, ensuring countries are prepared to deal with climate impacts, especially for the poorest and most vulnerable.

3. Strengthen Least Developed Countries [LDC], civil society and grassroots **participation** at international level, bringing their voices to the table.

Globally, Irish financial support for international climate action is channelled chiefly through Government Departments and Agencies represented on the National Delegation, chaired by the Department of Communications, Climate Action and Environment. The National Delegation meets regularly to discuss developments in the climate change area with a view to ensuring a coherent and whole-of-Government approach to climate action [SDG 13A].

Ireland has committed to scaling up its financial contributions in support of the commitment given by developed country Parties to the UNFCCC in 2009 to jointly mobilise US\$100 billion annually by 2020 from public and private sources to support climate action in developing countries.

In this regard, Ireland committed to providing €175 million between 2016 and 2020 which is to be achieved primarily through Ireland's international development cooperation response. Ireland is on track to meet these commitments. In 2016, the Department of Foreign Affairs and Trade provided €50.6m in climate finance as part of our international development cooperation programme.

Ireland seeks to deepen the climate change relevance and impact of our existing work in our key partner countries, almost all of which are Least Developed Countries [LDC], with a focus on those most vulnerable. We work with international partners to answer the call to action on climate, through supporting countries to devise strategies and investible and effective climate action plans, and building national and local capacity to receive finance. We seek to strengthen LDC voice at international level, with capacity building support, and to bring civil society organisations and grassroots voices to the table. We also support climate adaptation in agriculture, food and energy systems, disaster risk reduction, and support to strengthen the resilience of poor and vulnerable households, primarily in Sub-Saharan Africa [SDG 13B].

Under the Paris Agreement, Ireland also provides direct support to the Least Developed Countries Fund [LDCF, €1m per annum in 2016-18] and the Least Developed Countries Expert Group [LEG, €500,000 per annum in 2016-18], both of which assist vulnerable countries in developing and implementing strong National Adaptation Plans to prepare for the medium and long-term impacts of a changing climate. Ireland is among three developed countries [Canada, Austria and Ireland] who are members of the Least Developed Countries Expert Group, and was nominated for this role by the EU at COP21 [SDG 13.2].

In our key partner countries, Ireland has developed a Climate and Development Learning Platform, working with the International Institute for Environment and Development, to support the integration of climate across our International Development Cooperation Programme. The Platform works to strengthen understanding of climate adaptation and mitigation solutions to inform effective development programming, link local research to inform and add value to National and International Policy engagements, and capture learning and share knowledge through a strong community of practice. For example, the Platform has been supporting research in vulnerable disaster prone districts in Mozambique, supporting an innovative pilot model to link social protection delivery with suitable climate adaptation measures, which will inform the Mozambique Government's Social Protection Strategy and Local Climate Adaptation Plans, as well as Ireland's engagement and support in country. The Platform has also been conducting research on identifying effective climate resilient livelihood interventions in Ethiopia, to inform resilience programming for Irish Aid and partners, and engagement with policies and planning frameworks at national level. Further information on this work is freely accessible at www.climatelearningplatform.org [SDG 13.1].

In 2017, Ireland's Minister for Communications, Climate Action and Environment announced that Ireland will join the Nationally Determined Contributions [NDC] Partnership. Through the NDC Partnership, Ireland will be able to offer its key expertise and insights from our existing work with developing countries. This will focus on adaptation support for our developing country partners and on sharing our experiences with the world. Through its membership to the NDC Partnership, Ireland may help bring those developing countries closer to achieving their ambitions under their own respective NDCs, which in turn will help to strengthen their resilience and adaptive capacity to climate-related hazards and natural disasters. Additional funding of €2m has been provided to the Green Climate Fund in both 2016 and 2017, and a further contribution of €500,000 to other multilateral funds and agencies [SDG 13.B].

Goal 14: Life Below Water

Based on the EU's SDG indicators [using 2013 data], the **sufficiency of Ireland's marine sites designated under the EU Habitats Directive** is below the EU average, as is Ireland's **percentage of bathing sites with excellent water quality, coastal waters** [using 2016 data]. In common with other EU Member States with fishing fleets, Ireland's **catches from major fishing areas** decreased in 2016 compared to 2001.

The Government launched the **River Basin Management Plan [RBMP] for Ireland 2018-2021** in April 2018. The RBMP outlines the measures the State and other sectors will take to improve water quality in Ireland's groundwater, rivers, lakes, estuarine and coastal waters in the period to 2021 [**SDG 14.1**]. The Government aims to protect and improve water quality in 726 of Ireland's 4,829 water bodies over the next four years. The Plan responds to requirements under the EU's Water Framework Directive [WFD].

The current state of Ireland's marine environment is highlighted in Ireland's own national reports on the EU Habitats Directive and the EU Marine Strategy Framework Directive [MSFD] in 2013. The MSFD requires European Member States, including Ireland, to reach good environmental status [GES] in the marine environment by the year 2020 at the latest. The Directive has been transposed into national legislation by Ireland [**SDG 14.2, 14.5**].

Of the marine habitats assessed under the Habitats Directive, only sandbanks and sea caves were assessed as being in 'favourable' condition. Estuaries, tidal mudflats, large shallow inlets and bays were assessed as being in 'inadequate' condition. Reefs and lagoons were in 'bad' condition. Further monitoring and reporting on the ecological status of Ireland's marine habitats will be forthcoming in 2018 under the MSFD and the WFD, which will give a clearer picture of the state of Ireland's marine environment.

Pressures from human activities on Ireland's coastal and marine biodiversity and ecosystem services arise from a growing range of sources including nutrient and chemical discharge from terrestrial ecosystems and through direct physical disturbance and habitat degradation from pollution, litter and man-made noise. These pressures are mainly in transitional and coastal waters. Fishing has widespread impacts on both pelagic [i.e., water column] and seabed communities, particularly for species with low growth rates, soft substrates or cold water coral reefs, and some areas have been heavily impacted by this activity. There are also concerns about the level of by-catch of birds and marine mammals in certain fisheries.

Fish populations are generally improving since the reform of the EU **Common Fisheries Policy [CFP]** and more sustainable management of fish populations with the setting of **Maximum Sustainable Yield [MSY]** for commercial species. There are also provisions in the revised CFP for the establishment and implementation of clear conservation measures where adverse environmental impacts from fishing are thought to occur, with a view to ensuring better marine ecosystem and biodiversity protection. Climate change and ocean acidification present considerable threats and may modify effects of other pressures and facilitate further establishment and spread of invasive species.

The protection of our marine ecosystems and compliance with national and international environmental legislation and full implementation of the **MSFD**, **WFD**, **Habitats Directive** and revised CFP will help achieve Ireland's Vision for Biodiversity [i.e. that Ireland's marine biodiversity and ecosystems are conserved and restored, delivering benefits essential for all sectors of society]. The development, by contributing Government Departments, of effective Marine Spatial Planning for Ireland's coastal zone and Exclusive Economic Zone [EEZ] waters will also assist in the identification and improved protection of pressurised or threatened habitats and species, in line with the aims of the EU Maritime Spatial Planning Directive [2014/89/EU] and MSFD. The European Maritime Fisheries Fund [EMFF] contains measures such as investments in the protection and restoration of marine flora and fauna, improvements to the selectivity of fishing gear, and schemes to improve the environmental performance of aquaculture farms.

Ireland also committed to roll-out a Global Citizenship: Marine Environment education module for school children in 2017. It further committed to the continued support of the **Clean Coasts Programme** which engages communities to work actively with local authorities to protect Ireland's beaches, seas and marine life. Ireland announced the expansion of its **"Fishing for Litter" Programme** which aims to retrieve plastics and other litter from the ocean as it threatens sea life and marine habitats. It is estimated that 80% of waste at sea is plastic. The Programme encourages fishermen to take ashore the litter they encounter at sea while fishing. Fishing boats of any nation signed up to Fishing for Litter can deposit collected litter waste in the member ports.

Ireland also reaffirmed its commitment to prohibit the sale or manufacture of certain products containing microbeads, including not just cosmetics but also body care and cleansing products as well as detergents and abrasive surface cleaning products, announced at the UN's First Ocean Conference in June 2017.

Supporting the SDGs Globally

At UN level, Ireland, through its membership of the EU, continues to play an active and constructive role in negotiations on a dedicated international agreement on high seas conservation and sustainable use [BBNJ].

At the October 2017 International Our Ocean Conference in Malta, Ireland committed to eight actions – three in the area of Marine Research, four in the area of Marine Litter with a final commitment in the area of Marine Protection. Through these commitments, Ireland aims to identify and support solutions to address some of the most important challenges facing the oceans: marine protection, marine pollution, climate change impact and sustainable fisheries.

Ireland committed €6 million in funding to the sector, stressing the importance of promoting and protecting the world's marine resources for present and for future generations.

€4m will be invested in INFOMAR – the Integrated Mapping For the Sustainable Development of Ireland's Marine Resource – a joint venture between the Geological Survey of Ireland and the Marine Institute. The programme is a successor to the Irish National Seabed Survey [INSS] and concentrates on creating a range of integrated mapping products of the physical, chemical and biological features of the seabed in the near-shore area.

€1 million will go towards Ship-Time Research on-board the RV Celtic Explorer in the period 2018-2021 to support the trilateral Atlantic Ocean Research Alliance [AORA] between Canada, the EU and the USA. AORA was launched in the North Atlantic when the Galway Statement on Atlantic Ocean Cooperation was signed between Canada, the EU and the USA in 2013. The overarching goal of the AORA is to advance their shared vision of an Atlantic Ocean that is healthy, resilient, safe, productive, understood and treasured so as to promote the well-being, prosperity and security of the present and future generations.

Ireland made a combined contribution of €50,000 to three United Nations law of the sea trust funds in 2017. The contribution will go to the United Nations trust fund created to assist developing states engage with the Commission on the Limits of the Continental Shelf, to the trust fund to assist developing states in participating in the work of the UN Regular Process for global reporting and assessment of the marine environment and to the fund to assist developing states to participate in the negotiations on a new legal instrument for the conservation and sustainable use of marine biological diversity in areas beyond national jurisdiction [BBNJ]. Since 2003 Ireland has contributed more than €800,000 to these trust funds.

The **National Marine Research & Innovation Strategy 2017-2021** was launched at the Our Ocean Wealth Summit in NUI Galway on June 30th 2017. The strategy provides a framework for research funders to assess the impact and likely return to the state from research investment in marine-related research themes. It is also designed to ensure that state support of marine research results in Irish researchers being able to compete at an international level and participate fully in transnational research projects.

Irish Aid provided €50,000 to the Trust Fund to support LDC participation at the 11th WTO Ministerial Conference in December 2017, which adopted Decisions, inter alia, on Fisheries Subsidies [**SDG 14.6**] and the creation of a working party on accession for South Sudan.

Ireland has signed and ratified the OSPAR Convention – the mechanism by which 15 Governments and the EU cooperate to protect the marine environment of the North-East Atlantic [North-East Atlantic].

Goal 15: Life on Land

EU and OECD indicators provide a mixed picture of Ireland's performance under Goal 15. The OECD, though its Better Life initiative and based on the latest available data in 2017, places Ireland within its middle performing tier under the headings of Forest Area, Threatened Birds, Threatened Mammals, and Threatened Plants. EU SDG indicators demonstrate that, relative to very low historical base, Ireland has in the period 2009-2015 seen a large increase in its share of forest area as a percentage of total country area, and. Ireland was the only country [based on 2013 data] to have a complete network of designated sites of terrestrial habitats and species listed in the annexes of the EU's Habitats Directives. Ireland's artificial land cover per capita is above the EU average but this can be attributed to Ireland's relatively low population density.

Ireland's own nationally produced **2013 Report on the Status of EU Protected Habitats and Species** showed that over 90% of listed habitats were assessed as having an unfavourable conservation status with over 30% demonstrating ongoing declines. Over 70% of habitats were negatively impacted by agricultural activities.

The picture for 61 native species protected under EU Habitats Directive is somewhat better with 52% assessed as being in 'Favourable' conservation status. Assessments carried out on Bird species protected under the EU Birds Directive indicate declining trends for over 20% of breeding and wintering bird species.

The occurrence and spread of invasive and non-native species in Ireland is increasing for all environments. Invasive species, such as the Zebra Mussel and Grey Squirrel, may displace native species and considerably alter biodiversity, and subsequently, ecosystem processes and services. To date, the majority of invasive species in Ireland have been plants [including Hottentot Fig, Giant Rhubarb, and Giant Hogweed] but the future trend may be towards invertebrates and vertebrate species comprising a greater percentage of new arrivals.

Responses to these pressures on biodiversity and ecosystem services in Ireland include implementation and enforcement of various **EU Directives on Water, Habitats, Birds, and Nitrates, the EU Regulation on Invasive Alien Species, and reform of the EU Common Agricultural Policy [CAP]** delivered through the national **Rural Development Programme [RDP]** [SDG 15.1, 15.2, 15.3, 15.8].

A central priority of the Irish RDP is restoring, preserving and enhancing ecosystems related to agriculture and forestry. Ireland will continue to develop and implement agri-environment schemes such as the **Green Low-carbon Agri-Environment Scheme [GLAS]** and **Locally Led Agri-Environment Schemes [LLAES]** and ensure that a measurable net gain for biodiversity is attained.

The **Forestry Programme 2014-2020 [SDG 15.2]** includes higher support for broadleaf planting and also measures to promote the creation of new native woodlands and the appropriate restoration management of existing native woodlands, to promote associated biodiversity and other ecosystem services. The Government commits to implementing actions in this programme in order to maximise positive outcomes for biodiversity and ecosystem services and restoration of areas impacted by inappropriate forestry.

The **2016 National Peatlands Strategy** and the **National Raised Bog SAC Management Plan [SDG 15.5]** outlines the way forward for conservation and restoration of important peatland sites which will also combat desertification and halt and reverse land degradation and halt biodiversity loss.

Natural capital accounting has advanced with the aid of the UN Statistical Commission of the System for Environmental and Economic Accounts [SEEA], which provides an internationally agreed method to account for material natural resources like minerals, timber and fisheries. Progress in measuring and valuing elements of Ireland's biodiversity is being made through the valuation of water services, the production of guidelines for natural capital accounting and reporting for government and industry, and the development of national forest accounts using the SEEA framework.

A national **Biodiversity Expenditure Review [2010-2015]** will be published in 2018 which examines expenditure from relevant sectors including, Agriculture, Forestry, Marine, Heritage and eNGOs. This review also presents innovative financial mechanisms that could be utilised to mobilise additional resources for the conservation and sustainable use of biodiversity. Research will build on this review to undertake a Financial Needs Assessment to determine the resources required to conserve and restore biodiversity.

As a Party to the UN Convention on Biological Diversity, Ireland has made a commitment to prepare Action Plans towards the achievement of the Convention's targets: namely to secure the conservation of biological diversity; sustainable use of its components; and the equitable sharing of the benefits arising out of the utilisation of genetic resources. Ireland's **third National Biodiversity Action Plan [NBAP], 2017-2021 [SDG 15.9]** sets out actions through which a range of government, civil and private sectors will undertake to achieve Ireland's *Vision for Biodiversity* that "biodiversity and ecosystems in Ireland are conserved and restored, delivering benefits essential for all sectors of society and that Ireland contributes to efforts to halt the loss of biodiversity and the degradation of ecosystems in the EU and globally".

The NBAP contains 119 actions under a framework of seven strategic objectives. These encompass mainstreaming biodiversity into decision-making across all sectors; strengthening the knowledge base for the conservation; increasing awareness and appreciation of biodiversity and ecosystem services; conserving and restoring biodiversity and ecosystem services in the wider countryside; conserving and restoring ecosystem services in the marine environment; expanding and improving management of protected areas and species; and strengthening international governance for biodiversity and ecosystem services.

Many of the targeted actions in the NBAP also contribute towards Ireland's obligations under EU environmental directives and other relevant national policies including the National Peatlands Strategy and the **Climate Change Adaptation Framework**.

The NBAP highlights the 2030 Agenda which recognises that sustainable management of natural resources is relevant to achieving all the SDGs, and therefore the crucial role of biodiversity and ecosystem services in the well-being of both people and our planet. The actions under each objective within the NBAP will contribute towards achieving many of the SDGs. These links between the NBAP objectives and the SDGs are listed after each objective within Appendix 1 of the NBAP.

One of the actions within the NBAP aims to “Build on the National Biodiversity Indicators to develop state, pressures, and response indicators to allow assessment of Ireland’s national and international biodiversity commitments by 2020, including this the third NBAP, the EU Biodiversity Strategy, the Convention on Biological Diversity, and the SDGs”. These indicators are hosted on the **National Biodiversity Data Centre** website <http://indicators.biodiversityireland.ie/>. The indicators are currently being tagged where linkages to the SDGs have been identified

Supporting the SDGs Globally

Strengthening international governance for biodiversity and ecosystem services is one of the strategic objectives of Ireland’s National Biodiversity Action Plan [NBAP]. The plan also includes a specific target on publishing a Convention on International Trade in Endangered Species of Wild Fauna and Flora [CITES] national enforcement plan that will incorporate actions from the EU Action Plan against Wildlife Trafficking [**SDG15.7**].

Ireland has signed and ratified a number of other international conventions, treaties, protocols and agreements that seek to provide a global response and approach to protecting biodiversity and ecosystem services, including: the Convention on Biological Diversity [CBD], the UN Bonn Convention [on conservation of migratory species of wild animals], and the Ramsar Convention [on wetlands]. Ireland is also a member of the Intergovernmental Platform on Biodiversity and Ecosystem Services [IPBES].

The NBAP includes a target for Biodiversity to be made a component of Ireland’s development cooperation programme; and for support to, and cooperation with, developing countries to take into account biological diversity through the application of the CBD. Ireland will also continue to contribute data and information to European and international networks [including the Global Biodiversity Information Facility, and the European Environment Agency] to support conservation research and policy.

Goal 16: Peace, Justice and Strong Institutions

Ireland is, by global and EU standards a highly peaceful and safe country. The EU SDGs indicators demonstrate that Ireland's **death rate due to homicide**, the **percentage of the Irish population reporting occurrence of crime, violence or vandalism in their area**, **Irish Government expenditure on law courts** and the **perceived independence of the justice system** in Ireland are all better than the EU average. Ireland's score of 74/100 in the **Corruption Perceptions Index**, where 100 equals minimal perception of corruption, is positive but leaves room for further improvement.

Investigations into all forms of criminality in Ireland is solely a matter for the Commissioner of An Garda Síochána [the Irish Police Service] and his management team and the Minister for Justice and Equality has no role in relation to particular investigations. For its part, the Government remains committed to ensuring that An Garda Síochána have the necessary resources to tackle all forms of crime in Ireland.

An Garda Síochána continues to monitor all new and emerging crime trends, including trends relating to violent crime. Garda Operation Thor involves a broad range of activities to tackle organised crime gangs and other prolific offenders as well as working with communities to prevent crime. This comprehensive national operation is supported by the enhanced Government investment in Garda resources, including an allocation of almost €100 million for Garda overtime in 2017. Furthermore, **An Garda Síochána's Modernisation and Renewal Programme 2016-2021** places a strong emphasis on developing and supporting the community policing ethos of the organisation and enhancing the current delivery model so that Gardaí spend more time in the community, gaining public confidence and trust and providing a greater sense of security. It will result in the introduction of multi-skilled Community Policing Teams in every district. Community Policing Teams will be made-up of Gardaí from a number of different units who will work with the local community to prevent and detect crime, including all forms of serious crime. Substantial progress is being made by An Garda Síochána in tackling these forms of crime, particularly the area of property-related crime [SDG 16.1].

'**Tackling Youth Crime**', the **Youth Justice Action Plan [YJAP] 2014-2018** is a cross-cutting policy statement in relation to children and young persons who may become involved in crime and anti-social behaviour. The YJAP forms part of 'Better Outcomes, Brighter Futures', the National Policy Framework for Young People 2014-2020, developed by the Department of Children and Youth Affairs to support better outcomes for children and families. The broad aims of the YJAP are to:

- ▶ support the continued downward trends in high volume crime and the use of detention;
- ▶ become more adept in understanding and intervening in more serious crime offending patterns;
- ▶ improve the effectiveness and efficiency of these interventions in addressing the behaviour and needs of the children and young persons involved.

The Plan involves evidence-informed targeted interventions to achieve better outcomes for children who come in contact with the criminal justice system, as well as reducing the level of crime and its impact on communities. The implementation of the YJAP is overseen by a Cross-Agency Team led by the Irish Youth Justice Service, with representation from the Probation Service, An Garda Síochána, the Irish Prison Service, the Oberstown Detention School Campus and TUSLA – the Child and Family Agency [SDG 16. 2].

The core objective of the **Second National Action Plan to Prevent and Combat Human Trafficking in Ireland** is to identify and support victims. It contains a key focus for those that may be particularly vulnerable, such as children. As such there are 10 actions aimed at achieving this that are specific to children, including improved data collection, training, and ensuring that the best interests of child victims are the primary consideration in the provision of all services **[SDG 16.2]**.

EU Justice Scoreboard: Ireland participates in the EU Justice Scoreboard project every year. This provides comparable data on the independence, quality, and efficiency of national justice systems. Ireland scores very highly on measures of the independence of the judiciary generally throughout the 2017 EU Justice Scoreboard report.

Review of the Administration of Civil Justice: In March 2017, it was announced that a Group would be established to review and reform the administration of civil justice in the State. The Group is to report to the Minister for Justice and Equality and will make recommendations for changes with a view to improving access to civil justice in Ireland. The aim of the Review is to examine the current administration of civil justice in the State with a view to, among other things, improving access to justice, reducing the cost of litigation, and ensuring timely hearings **[SDG 16.3]**.

Through its membership of the Financial Action Taskforce [FATF], an inter-governmental organisation set up by the G7 with 37 member countries of which Ireland is one, Ireland is subject to mutual evaluation [peer review] with regard to the strength and effectiveness of our anti-money laundering and counter-terrorist financing measures. The most recent mutual evaluation review was published in September 2017 and was overall positive in nature, while highlighting specific areas where improvements need to be made. Work continues to ensure compliance with the findings of the mutual evaluation review, while also focusing on the transposition of European legal instruments in this area [primarily relating to the Fourth Anti-Money Laundering Directive] **[SDG 16.4]**.

The development and implementation of anti-corruption policies does not rest with any one body in Ireland. The competence to prevent, detect, investigate and prosecute corruption is spread across a number of agencies with a mandate to tackle corruption such as tribunals of inquiry, commissions of inquiry, **high court inspectors**, the **Financial Regulator**, the **Standards in Public Office Commission [SIPO]**, **local authorities**, the **Ombudsman**, **parliamentary committees on members' interests**, the **Garda National Economic Crime Bureau**, the **Criminal Assets Bureau [CAB]**, the **Office of the Director of Corporate Enforcement [ODCE]**, the **Comptroller and Auditor-General**, the **Public Accounts Committee** and the **Director of Public Prosecutions** [responsible for all criminal prosecutions of the most serious cases].

Article 6 of the UN Convention against Corruption requires that each State Party shall, in accordance with the fundamental principles of its legal system, ensure the existence of a body or bodies that prevent corruption. The Convention does not mandate the creation or maintenance of a body and recognises that, given the range of responsibilities and functions to be undertaken, it may be that this task is assigned to different existing agencies.

The Government is strongly committed to ensuring that the necessary domestic measures are in place to effectively combat corruption both nationally and in the context of our international commitments [SDG 16.5].

There is a broad spectrum of legislation in relation to the prevention of corruption including the **Prevention of Corruption Acts**, ethics legislation, political funding legislation, money laundering legislation, the Companies Acts etc. Also, the Programme for Government contains a commitment to enact a new consolidated and reformed anti-corruption law.

The **Criminal Justice [Corruption] Bill** published on the 1 November 2017, will clarify and strengthen the law criminalising corruption. The Bill will completely modernise Irish anti-corruption laws. It will repeal and replace the seven previous Prevention of Corruption Acts dating back as far as 1889. However, the Bill is not merely a consolidation of the old laws. It is a robust and innovative piece of legislation that provides for a number of new offences as well as stronger penalties for those convicted of corruption. When it is enacted, it will significantly strengthen our capacity to tackle corruption, both in public office and in commercial enterprises.

The Bill includes a new offence of ‘trading in influence’ to criminalise bribing a person who may exert an improper influence over the decision-making of a public or foreign official. Under the Bill, it will be an offence for a public official to make use of confidential information acquired in the course of their duties to obtain an advantage,

The Bill also includes a new strict liability offence where a corporation can be liable for the actions of directors, managers, employees or agents who commit a corruption offence for the benefit of the corporation. Designed to prevent corruption in corporate bodies, it shall be a defence for a company to prove that it took all reasonable measures and exercised due diligence to avoid the commission of the offence.

Regarding penalties, sentences of up to 10 years are provided for as well as unlimited fines for conviction on indictment of the main corruption offences in the Bill. The Bill gives discretion to a court to order that a public official found guilty of a corruption offence be removed from their public office or position. The Court will also have the discretion to prohibit those convicted of corruption offences from seeking certain public appointments for up to ten years.

The Bill will help to meet Ireland’s commitments to various international anti-corruption instruments, such as EU Council Decisions, the United Nations Convention on Corruption, the OECD Convention on Bribery of foreign public officials and the Council of Europe Criminal Law Convention on Corruption.

Our Public Service 2020 is part of a the broader transformation landscape across Ireland’s public service and is designed “to empower frontline service providers to make more decisions, ensure more accessible public services, encourage more collaboration between public sector bodies and reward public service innovation and change” [Programme for Partnership Government 2016]. The actions of *Our Public Service 2020* cut across all areas of the public service and will support continuous improvements in how public servants and public service organisations deliver for the Irish people. The actions are designed to complement and support the many reforms already being delivered at local and national level in the various sectors of the public service. This reform strategy has been designed

to enable the public service to deliver better outcomes and results for the public in an increasingly complex environment.

The **Civil Service Renewal Plan** is being delivered on a phased basis and significant progress has been made on the programme of change to date. The Plan outlines 25 practical actions to create a more unified, professional, responsive and open and accountable Civil Service. The overall vision is to provide a world-class service to the State and to the people of Ireland.

The next phase of implementation of Civil Service Renewal, overseen by the Civil Service Management Board [CSMB], aims to deepen and embed renewal across the Civil Service and also consolidate and implement current programmes already underway. Other priority actions for 2018 include work to strengthen policy-making; to improve the delivery of shared whole-of-Government projects; to support the development of a National Data Infrastructure and the area of innovation. Work will continue to implement the **Civil Service People Strategy; Digital and ICT Strategy and Shared Services Strategy**. In addition, actions will be taken in follow up to the results of the 2017 Civil Service Employee Engagement Survey which was published in March 2018. Civil Service Renewal will also align with the programme of reform in *Our Public Service 2020*.

Ireland continues to pursue a wide-ranging reform programme aimed at delivering an open, accountable and ethical government underpinned by a transparent and effective public system. Real progress has been made on several different fronts with a number of significant legislative and public governance measures being delivered.

Better use and re-use of the data Government holds is a cornerstone of the drive for greater digital delivery of services, a key priority in our efforts to reform the Public Service. Widespread data-sharing between public bodies reduces the burden on citizens and business by avoiding the need to provide the same information multiple times to different bodies.

Publication of official non-personal data in open format is also a core element of the Government's efforts to improve the use of data. The Department of Public Expenditure and Reform is leading on Ireland's **Open Data** initiative, which is a key part of the Public Service's reform activities. Significant progress has been made in progressing the Open Data initiative and an Open Data Strategy 2017-2022 was published in July 2017. Implementation of the Strategy is underway under the leadership of the Open Data Governance Board. The vision is for Ireland to be a leader in Open Data and to create an environment where the economic, social and democratic benefits of Open Data are recognised and realised.

A modernised, consolidated, restructured and more accessible Freedom of Information Act was also introduced in October 2014, repealing the 1997 and 2003 Freedom of Information [FOI] Acts.

A substantial review of the effectiveness and efficiency of Ireland's current **Ethics framework** has been undertaken, including consideration of the recommendations of the Mahon and Moriarty Tribunals and other relevant recommendations, as well as international best practice. The **Regulation of Lobbying Act 2015** established a register for lobbying and a new **Public Sector Standards Bill** aims to significantly enhance the existing framework for identifying, disclosing and managing conflicts of interest and minimising corruption risks, to achieve a shift towards a more dynamic and risk-based system of

compliance and to ensure that the institutional framework for oversight, investigation and enforcement is robust and effective. The Government also introduced new legislation on **Protected Disclosures** in 2014.

Ireland is also a member of the Freedom Online Coalition. The Freedom Online Coalition [FOC] is a cross-regional coalition which is committed to advancing internet freedom – free expression, association, assembly and privacy online – worldwide. The Coalition was established in 2012, with Ireland as one of its founding members. Through intergovernmental meetings and consultations with stakeholders, as well as at the annual multi-stakeholder conference, the Coalition’s member states work together diplomatically to voice concern over measures to restrict internet freedom and support those individuals whose human rights online are curtailed. Ireland endorses the principles behind the Coalition’s recommendations and highlights our national priorities, particularly in relation to the right of freedom to expression and the protection of civil society space. The founding declaration of the Coalition contains a statement of dedication on the part of members to “promote the freedoms of expression, association, and peaceful assembly with respect to the internet and connection technologies [SDG 16.10].

Supporting the SDGs Globally

Ireland’s approach to sustaining peace and international security is anchored in the values set out in our Constitution of the ‘ideal of peace and friendly cooperation amongst nations founded on international justice and morality’. This guides Ireland’s efforts towards a safer, more peaceful, sustainable, equitable and inclusive world. The promotion and protection of human rights is a fundamental feature of Ireland’s foreign and international development policies.

Ireland’s commitment to the principles and values enshrined in the United Nations Charter has been constant, and our steadfast contribution to the UN in the fields of sustainable development, peacekeeping, disarmament and human rights has been at the heart of Irish foreign policy. We recognise that there can be no end to poverty without peace and Ireland’s approach to achieving sustainable peace prioritises investment in conflict prevention, an increased focus on post-conflict reconciliation and other forms of peacebuilding, and the empowerment of women to have a more visible and recognised role in decision-making. Ireland has strengthened its contribution to international efforts aimed at achieving sustainable peace, in particular through support to UN mediation mechanisms, our support for the UN Peacebuilding Fund, and ongoing advocacy related to conflict prevention and peacebuilding aspects [SDG 16.1]. Ireland also has a bilateral development programme in a number of states affected by fragility or conflict including Sierra Leone, Liberia, Zimbabwe, Palestine and Colombia [SDG 16.1, SDG 16.2].

Ireland has a strong and committed tradition of principled humanitarian action through its international development cooperation programme. Ireland’s response to crises is underpinned by a strong commitment to international humanitarian law and the provision of flexible and timely funding that is based on the principles of independence, neutrality, impartiality and humanity. Our humanitarian engagement is based on need and prioritises forgotten crises. It gives us a significant footprint in fragile and conflict-affected contexts beyond our development programmes in partner countries. As a result of our response to the increasing number of crises in Syria, Yemen, the Horn of Africa, and the Lake Chad

region, as well as climate-related emergencies, humanitarian assistance now accounts for over a quarter of Ireland's overseas development assistance.

The Irish Defence Forces have a proud tradition of successful participation in peace support operations. The operational experience gained continues to form a solid foundation from which to face the challenges posed by the changing nature of international conflict prevention and crisis management. The Government decides on a case-by-case basis whether, when and how to commit Defence Forces' personnel to such operations, via a "triple lock" system:

- ▶ The operation must be authorised/mandated by the United Nations
- ▶ It must be approved by the Government; and
- ▶ It must be approved by way of a resolution of Dáil Éireann, where the size of a Defence Forces contribution is more than twelve personnel.

Irish Defence Forces personnel have served in countries all over the world, including: Central America, Russia, the former Yugoslavia, Cambodia, Lebanon, Iran, Iraq, Afghanistan, Kuwait, Namibia, Western Sahara, Liberia, East Timor, Tchad, Mali, Cyprus, Congo, Angola, Somalia, Eritrea, and Cote d'Ivoire. The high standing of the Irish Defence Forces within UN Peacekeeping is reflected in the senior positions that have been held by Irish Military personnel in the past, Force Commander in Cyprus [UNFICYP], Syria-Israel Border [UNDOF] and Lebanon [UNIFIL], Chief of Staff of the United Nations Troops Supervision Organisation in the Middle East [UNTSO] and UNMIL in Liberia and Chief Military Observer India- Pakistani Border [UNMOGIP] [SDG 16.1, SDG 16.2].

The Irish Defence Forces have a workplace policy on human rights and a dignity charter designed to create awareness of the Defence Forces' role and obligations in relation to gender-based violence and human rights. The Defence Forces ensures that its personnel deploying on active service to missions throughout the world receive detailed instruction in the areas of human rights afforded to minorities and women, cultural awareness issues and codes of conduct and behaviour both for the conduct of their [respective] missions and also their individual behaviour. The Defence Forces United Nations Training School Ireland [UNTSI] conducts the following courses ; Protection of Civilians; UN Observers; Human Rights Train the Trainers; Civilian/Military Relations, all of which have modules on Gender-Based Violence [GBV] and Sexual Exploitation and Abuse [SEA].

At the EU, Ireland advocates for a strong EU contribution to peacekeeping. Oriented towards external challenges of peacekeeping, conflict prevention and strengthening international security, the EU's Common Security and Defence Policy [CSDP] provides the operational capacity to undertake crisis management operations outside the EU, in accordance with the principles of the UN Charter. Ireland participates in a military and civilian capacity within CSDP missions, with 86 personnel currently deployed across 3 Missions [EUFOR BiH, EUTM Mali, EUNAVFOR Med OP SOPHIA]. Irish Military personnel have commanded the following EU CSDP Missions: Operational Commander, EUFOR Tchad; Mission Commander, EU Training Mission Somalia [SDG 16.1, SDG 16.2].

Ireland focuses on promoting gender equality and women's empowerment, both from a rights based perspective and also in recognising gender inequality as a root cause of conflict and instability. Ireland prioritises preventing and responding to sexual and gender-based violence in peacekeeping and in response to emergencies. Ireland has produced two National Action Plans on UNSCR 1325 on Women, Peace and Security, and will begin

consultations for a third in the second half of 2018. Commitments in the National Action Plan extend to all of Ireland's peace and security work, and regular monitoring ensures coherence across Government Departments. Ireland continues to promote the agenda at the international level, across international policies and instruments, whilst also placing emphasis on domestic implementation. In addition to addressing aspects of the WPS agenda that focus on conflict related harms against women, Ireland also places a strong emphasis on the promotion of women's participation in international peacebuilding, such as in negotiations and mechanisms of international security [SDG 16.1].

Ireland's work on Disarmament has included a strong focus on the gendered impact of weapons and on the need to improve women's participation rates in disarmament forums and negotiations. Ireland has advocated successfully within the EU to have gender and disarmament adopted as one of the EU's priority areas for action in its disarmament and non-proliferation work.

The Irish Defence Forces have published a **Second Defence Forces Action Plan on the Implementation of UNSCR 1325**. The Defence Forces have also created a specific Staff Officer Gender Advisory expert appointment to mainstream gender in the Defence Forces, to co-ordinate professional development and training in this field, and to monitor the application of UN 1325 across all of the Defence Forces activities at home and abroad.

The Defence Forces also have an Equality and Diversity policy which includes detailed guidelines on Gender, Diversity and Anti-Racism and Equality of Opportunity.

The promotion of the rule of law and ensuring access to justice for all is reflected in Ireland's active adherence to core international and European human rights treaties, strong support for strengthening the regional and multilateral human rights framework and support for universal adherence to the Rome Statue establishing the International Criminal Court. Ireland is committed to the universality, indivisibility and interrelatedness of all human rights, to accountability for human rights violations and abuses and to the protection of those who are most vulnerable and marginalised. We participate in the scrutiny of the UN members' human rights records through the Universal Periodic Review process. We contribute to the EU's human rights work through EU human rights dialogues with non-EU countries and EU human rights country strategy. We are committed to the Council of Europe's role as the reference point for human rights, democracy and rule of law across Europe, and the role of the European Convention on Human Rights and its associated Court. We promote respect for and adherence to International Humanitarian Law in all circumstances [SDG 16.3].

Ireland has played a leading role in efforts to promote disarmament, non-proliferation and the regulation of new weapons working to secure agreements setting global norms on landmines, cluster munitions and other weapons. In 2017, Ireland played a leading role in the process that led to the adoption of the Treaty on the Prohibition of Nuclear Weapons [TPNW]. Through the international development cooperation programme, Ireland supports de-mining in Afghanistan, Cambodia, Laos and Zimbabwe [SDG 16.4].

Ireland is a party to a number of international agreements, including the Council of Europe's Group of States against Corruption [GRECO], the United Nations Convention against Corruption and the OECD Convention on Combating Bribery of Public Officials in International Business Transactions. As a party to these international agreements, Ireland has undergone numerous evaluations and remains subject to such peer evaluation. The Reports and recommendations concerning Ireland are published on the websites of the Council of Europe, OECD and UNODC [SDG 16.5].

We are committed to effective, accountable and transparent institutions. This continues to be an important aspect of Ireland's international development policy. We work to strengthen the institutions of democracy, rule of law and accountability in the countries where we work, so that they work for the good of citizens, especially those who are marginalised or excluded. Programmes targeting key accountability institutions such as the Office of the Auditor General in Mozambique, and Parliaments, which have responsibility over public finances and the enforcement of accountability, are also supported in Uganda and Zambia. The emergence of multi-donor funding mechanisms for civil society organisations engaged in governance activities is a key feature in Malawi, Ethiopia, Mozambique and Uganda. Such funding mechanisms provide resources to local civil society actors working in challenging governance and operational environments, that focus on poverty reduction, good governance, accountability, protection of human rights, access to justice and capacity development [SDG 16.6].

Ireland is committed to the principles of development effectiveness at a global, and particularly country level, and to find innovative and effective ways of promoting country ownership, whilst continuing to support a focus on results, accountability and transparency and inclusive partnerships. Development effectiveness principles inform Irish Aid's strategic planning processes and country programme evaluations [SDG 16.6].

Ireland supports the strengthening of parliamentary oversight, accountability and domestic resource mobilisation in developing countries. We continue to have a partnership with the International Organisation of Supreme Audit Institutions [INTOSAI], to support independent audit institutions in developing countries, thereby facilitating improved tracking and reporting of expenditures to parliament. In support of the promotion of transparency and accountability, we fund Transparency International in their global anti-corruption efforts [SDG 16.6].

Ireland's support to the African Tax Administration Forum [ATAF] has also focused on tax evasion and illicit financial flows and has assisted developing countries to overcome obstacles to engage in Exchange of Information. Encouraging results are emerging, with Uganda for example recovering over US\$9 million as a result of successful support, following training for Ugandan officials by ATAF.

Ireland recognises that civil society space has come under increasing pressure in many parts of the world in recent years and in some countries, dialogue with civil society remains limited and the space for civil society engagement is either narrow or shrinking. The protection of civil society space is amongst Ireland's foreign policy priorities and we lead on a resolution on the matter for the first time at the Human Rights Council in 2013. Ireland continues to advocate at international level for the creation of a safe and enabling environment for civil society, free from reprisals, through multilateral engagement at human rights fora such as the United Nations and the EU and through bilateral relations [SDG 16.7].

Ireland has consistently supported broadening and strengthening the participation of developing countries in the institutions of global governance. A key commitment on Security Council reform is to emphasise the importance of increased African and SIDS representation [SDG 16.8].

Goal 17: Partnership for Goals

Working in partnership with others is central to Ireland's approach to international cooperation and to our contribution to meeting the SDGs.

SDG Goal 17.1 calls for strengthened domestic resource mobilisation and, consistent with this goal, Ireland supports and provides funding to the OECD's role in strengthening intergovernmental efforts to develop global norms on taxation through their tax and development programme. The Tax Inspectors without Borders initiative which emerged from the OECD programme has seen a total increase in revenue collected for developing countries of over US\$260million.

Ireland strongly supports the OECD's role in strengthening intergovernmental efforts to develop global norms on taxation and we are committed to the Base Erosion and Profit Shifting [BEPS] project, Country-by-Country reporting and automatic exchange of tax information. These are important initiatives that can help developing countries increase their tax take and generate increased resources. Ireland also supports the African Tax Administration Forum [ATAF] to articulate tax priorities, build capacity in tax policy and administration and advance the role of taxation in African governance and state building [SDG 17.1].

In 2017, Ireland joined the Addis Tax Initiative, an international commitment to strengthen international cooperation in the area of tax and development. The Initiative, launched at the Financing for Development summit held in Ethiopia in July 2015, calls on developed countries to collectively double their support for taxation/domestic revenue mobilisation by 2020 at the latest, partner countries to step up domestic revenue mobilisation and adhere to a core set of principles to enable effective revenue collection and for all signatories to ensure policy coherence for development [SDG 17.1].

With close links to achieving SDG 3 and SDG 8, Ireland supports north-south and south-south cooperation in the development of new products for diseases of poverty through health research. For example, our partner, The Global TB Alliance is working closely with European, Indonesian and South African partners to ensure that new, improved TB treatments are developed and evaluated and that partners are ready to launch these new medicines and make them available to patients as soon as they are available. [SDG 17.6].

Ireland supports the WTO Trust fund for LDC participation at WTO Ministerial Conferences. For example, 108 delegates from LDCs were supported to participate in the 10th WTO Ministerial Conference in 2015, including all of Irish Aid's LDC Key Partner Countries. Six Ministerial Decisions on agriculture, cotton and issues related to LDCs were adopted at this event.

In the EU, Ireland is a strong advocate for negotiating an approach that was as flexible as possible under WTO law, with a view to delivering trade agreements that support the development priorities and needs of African, Caribbean and Pacific [ACP] states. [SDG 17.10].

Ireland has facilitated increased engagement with Irish and UK wholesalers to facilitate countries in Sub-Saharan Africa as a source for retail goods. Irish Aid also supports a three year project on Access to Markets for Value Added goods made in East Africa which has led to strengthened capacity of 26 East African producers to market their products internationally [SDG 17.11].

The SDGs set the context for the need for increased policy coherence across our domestic and international engagement and work. Cross-government work is evident in several key areas such as Health, Agriculture, Environment and Climate Change, and Peace and Security. Concrete examples of good practice include recognition of the challenge posed by climate change in the Programme for a Partnership Government and in the establishment of a new Department of Communications, Climate Action and Environment; strengthened working relationships between the Department of Foreign Affairs and Trade and the Department of Health and the Department of Agriculture Food and the Marine on nutrition issues, and Ireland's multi stakeholder response to the Ebola crisis in West Africa. Building on already established representative fora, the Irish Forum for International Agriculture and Development [IFIAD] was recently launched with representation from a number of Government Departments, the private sector, civil society and academia. This forum provides the potential to advance policy coherence for development in relation to agriculture. Support to global health workforce planning has also been a key feature of cross departmental work, highlighted by the agreement of the 2017 Dublin Declaration on Human Resources for Health [SDG 17.14].

Delivering aid that reaches and benefits poor people in developing countries underpins Ireland's development co-operation. To achieve this, Ireland remains fully committed to aligning to national and local development priorities. We support and enable partner governments and civil society organisations to lead their development efforts while ensuring that we maintain a good understanding about the context in which we operate. Our programming objectives are grounded in evidence, aligned to partner country needs, and agreed in consultation with the partner government and other stakeholders. By providing multi-year indicative budgets for our programmes, Ireland provides good predictability to its partners and promotes the use of mixed funding mechanisms, which in fragile situations especially allows for adaptation of the programme and the means of delivery as the situation evolves [SDG 17.15].

International Financial Institutions will play a central role in the global partnership necessary to mobilise the finance necessary to achieve the SDGs. Through Ireland's financial contributions and active policy engagement at these institutions, we will aim to ensure that there is the means available to support truly sustainable economic growth, combat climate change and tackle poverty in all its forms. In this area Ireland has scaled up its efforts in recent years, joining the Asian Infrastructure Investment Bank and commencing contributions to the Green Climate Fund to complement our existing membership of the IMF, World Bank, Asian Development Bank, European Investment Bank, European Bank for Reconstruction and Development, and Council of Europe Development Bank. Most recently, Ireland has applied for membership of the African Development Bank which will complement our strong bilateral aid programme to the region [SDG 17.16].

Ireland provides financial support to the Global Partnership for Effective Development Cooperation and has participated in the monitoring rounds over the last number of years. Ireland also supports development effectiveness in fragile contexts through the partnership for International Dialogue on Peace and Security [IDPS] [SDG 17.16].

Ireland has committed to implement fully our international commitments on aid transparency, and to publish aid data in the internationally agreed format. We also work with our partners – governments, NGOs, multilateral organisations, and others – to ensure that they adhere to similar standards of accountability and transparency [SDG 17.16, SDG 17.17].

At the heart of the means of implementation of the SDGs are how ambitious development goals are to be financed. Ireland firmly believes that there is no scope for allowing momentum on the 2030 Agenda to slacken. Whilst recognising the critical importance of private finance to achieve the Goals, Ireland stresses the importance of retaining the focus of ODA on development and poverty reduction, particularly in countries most in need, and in bolstering domestic resource mobilisation as key to sustainable development [SDG 17.17].

Finally, related to data, monitoring and accountability, Ireland advocates in particular for gender disaggregated data and supports the Evidence and Data for Gender Equality Joint Programme of UN Women and the UN Statistics Division which aims to increase the availability and use of gender equality statistics in relation to education, employment, and asset ownership. Irish Aid also supports the UN Women flagship programme on statistics, Making Every Woman and Girl Count. The programme's objective is the production, availability, accessibility and use of quality data and statistics on key aspects of gender equality and women's empowerment. Ireland provided funding of €150,000 to the flagship programme in 2016 [SDG 17.18, SDG 17.19].

5. Conclusions and Next Steps

Ireland has, particularly in recent years, achieved significant progress on economic, social and environmental challenges through the mechanism of cross-government or whole-of-Government action plans or strategies. This joined up approach to policy should serve Ireland well in the period to 2030 as it implements the SDGs. As can be seen from the preceding chapter, Ireland has an extensive suite of national policies which address the 17 SDGs and their associated targets, and particularly in relation to social inclusion, Ireland is adopting world leading approaches for example in relation to the LGBTI+ community.

While this VNR reflects Ireland's overall strong economic recovery it also indicates that challenges remain for Ireland in terms of meeting its own national poverty targets, and addressing inequality of outcomes within the education system. While national policies in relation to achieving gender equality are ambitious, further progress in this area will need to be made, especially in relation to representation within the political system. A significant level of investment is required to protect Ireland's drinking and bathing waters but this will be addressed through the River Basin Management Plan and its associated capital investment. Performance in relation to life on land and under water in Ireland is also mixed. It should be noted in this regard that Ireland's Biodiversity Action Plan is potentially the most detailed Irish example of engagement with the SDGs in a sectoral policy and this is a positive indicator of future progress.

Ireland is adopting innovative collaboration based approaches to particular SDGs with the private sector, through the Stakeholder Forum on Corporate Social Responsibility and the Retail Action Group on Food Waste. Government will explore opportunities for more such collaborations, as well continuing and increasing its engagement with and support to civil society groups active in the SDG space.

This VNR has firmly placed Ireland's SDG implementation within the context of our membership of the EU. This is appropriate, as a significant amount of the policy and regulatory measures through which Ireland will achieve the SDGs are developed within the EU. The use of the EU SDG indicator set has also been beneficial to the preparation of this VNR as it provided an external independent guide as to indicator selection and provides for consistent cross country comparisons with Ireland's EU peers. Ireland intends to continue using this approach towards indicators in subsequent SDG reporting and will support the EU's work in further developing and expanding its SDG indicator set. Additionally, as the EU's own response to the SDGs continue to develop, Ireland as a Member State will be active in contributing to that development and will seek to keep the SDGs at the centre of the EU's internal agenda.

The timing of this VNR is useful given that Ireland has recently launched or will shortly launch a number of major national policies with relevance to the SDGs, and subsequent reports will provide information on the impact of these policies. The first SDG National implementation Plan is obviously the most relevant policy and Ireland will now focus on establishing and bedding in the ambitious stakeholder engagement arrangements and SDG awareness strategies provided for under the Plan. Both the NDP and the NPF recognise the interdependence of economic and social growth, as well as the importance of sustainability. The forthcoming National Social Inclusion Plan will also be an important pillar of Ireland's SDG implementation, as will the new Policy on International Development, which will further strengthen the alignment of Ireland's aid programme with the SDGs

Overall, while providing an important and comprehensive overview in relation to Ireland's SDG performance and relevant national policies, this first VNR should be considered as a stock taking exercise, which establishes a baseline against which Ireland's future progress will be measured. While remaining committed to reporting on all 17 Goals, for its next scheduled VNR, in 2022, Ireland will consider additional means of providing a greater level of sectoral detail, possibly through supplementary online reporting.

Annex I: Statistical Annex

This annex presents data for Ireland using the EU's SDG indicator set to track Ireland's progress towards meeting the SDGs. The annex provides data for 95 of the 100 EU SDG indicators, as the remaining five do not cover EU Member State level data but rather the EU as a whole and are therefore outside the scope of this National Review. The data included in this annex has been provided by the Central Statistics Office [CSO] Ireland's national statistical office and presented in tabular format by the Department of Communications, Climate Action and Environment who coordinated Ireland's VNR process. The annex has been prepared on the basis of the most recently available data as of March 2018. Where available, national data has been disaggregated on the basis of gender and socio-economic status.

Ireland has chosen to rely on the EU SDG indicator set for several reasons. Ireland considers that the EU SDG indicator set provides for a comprehensive and relevant assessment of Member States' progress toward achieving the SDGs. In addition, use of the EU SDG indicator set allows for comparisons between Ireland and its EU peers, and reflects the fact that a significant amount of the measures through which Ireland will achieve the SDGs will be developed/implemented within the EU's legislative and/or policy frameworks. Finally, Ireland considers the use of the EU SDG indicator enhances the transparency of this statistical annex as the indicators used have been independently selected by the EU statistical agency, Eurostat.

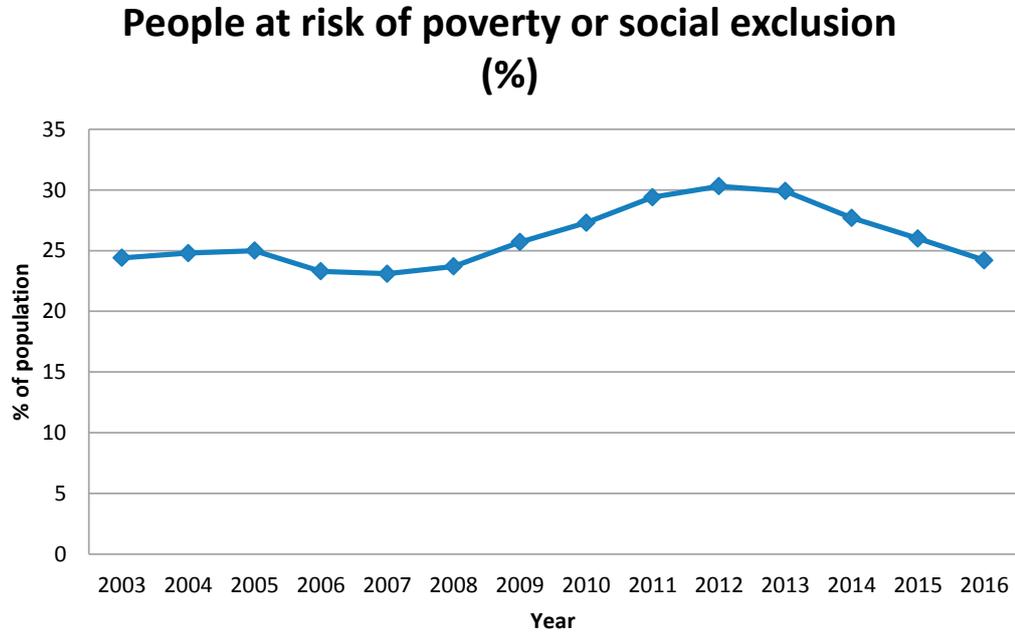

The EU SDG indicator set was published in July 2017 and the first 'Monitoring Report on Progress Towards the SDGs in an EU Context' based on the set was published in November 2017. The EU SDG indicator set is structured along the 17 SDGs and covers the social, economic, environmental and institutional dimension of sustainability as represented by the Agenda 2030. The Monitoring report notes that 'the 100 indicators are evenly distributed across the 17 Goals, so that progress in each SDG is measured by five or six indicators primarily attributed to them which reflect its broad objective and ambition. The indicators have been selected taking into account their policy relevance from an EU perspective, availability, country coverage, data freshness and quality. With a few exceptions, the indicators stem from already existing indicator sets used for monitoring long-term EU policies'.

Ireland intends to use the data presented in this annex as a baseline for its subsequent implementation of the SDGs. While the presentation of longer term data in this annex provides context for Ireland's progress in implementing the SDGs, Ireland considers the adoption of the 2030 Agenda in 2015 as the appropriate starting point for measuring ongoing progress.

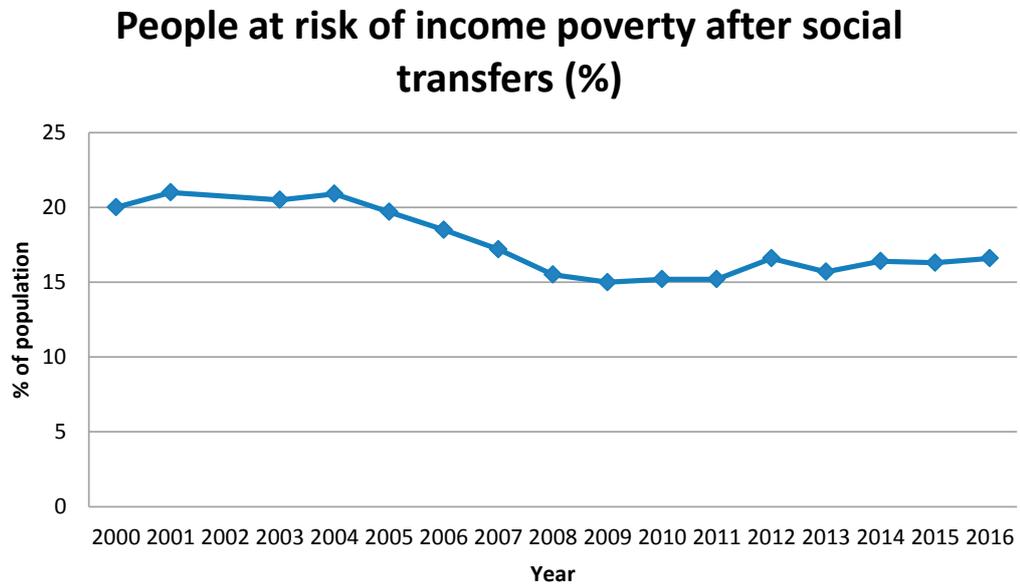

A number of the charts in this annex feature breaks in the times series presented. Breaks in time series may occur when the data collected in a specific year are not completely comparable with the data from previous years. This could be caused by a change in the classification used, the definition of the variable, the data coverage and/or other reasons. Breaks in time series could affect the continuity and consistency of data over time. However, it should be noted that such breaks do not undermine the reliability of the data.

SDG 1. End poverty in all its forms everywhere

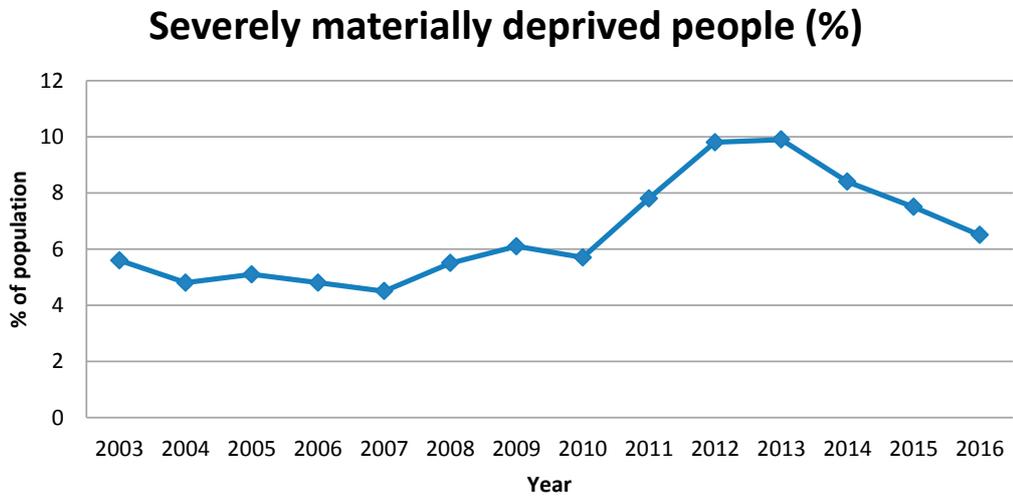

Eurostat SDG indicator 01.11 People at risk of poverty or social exclusion

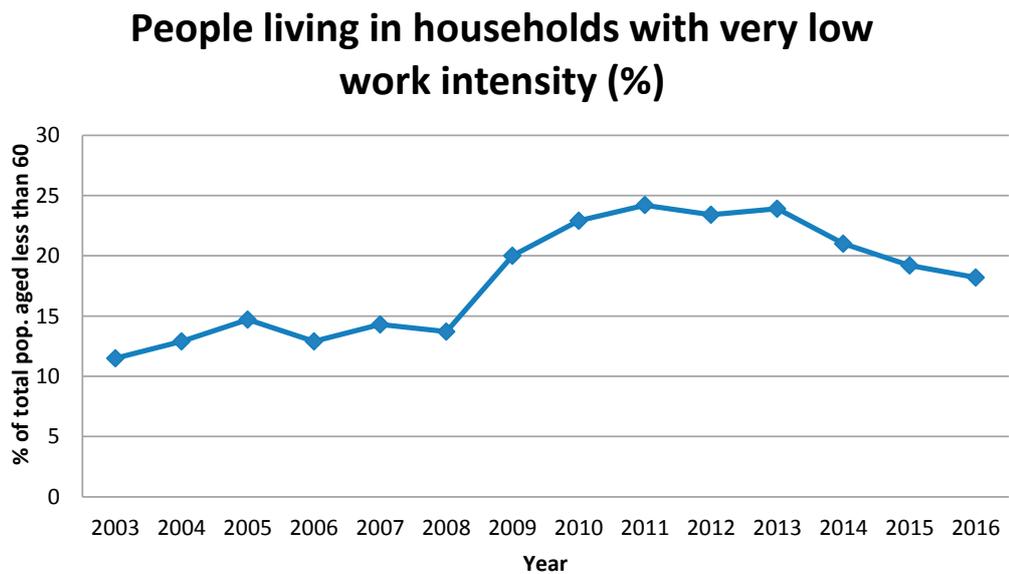

Eurostat SDG indicator 01.12 People at risk of poverty after social transfers

Eurostat SDG indicator 01.13 Severely materially deprived people

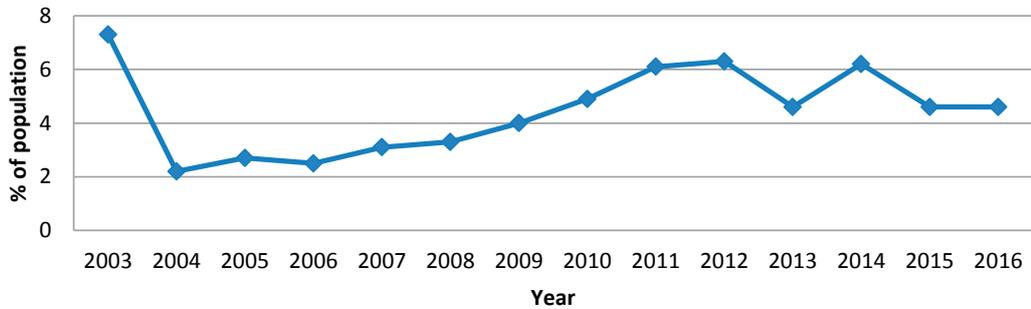

Eurostat SDG indicator 01.14 People living in households with very low work intensity

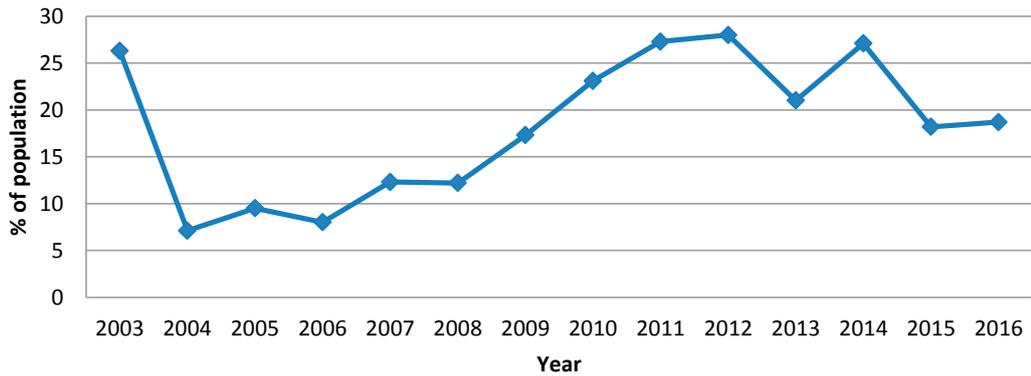

Eurostat SDG indicator 01.21 Housing cost overburden rate

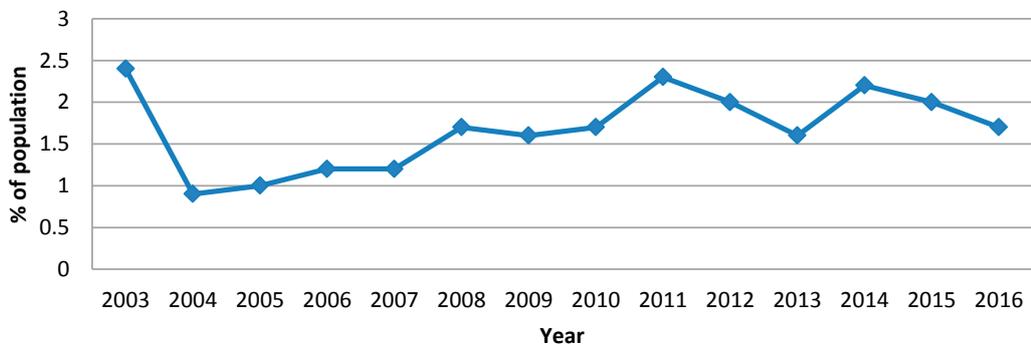

Housing cost overburden rate by poverty status - Total (%)

Housing cost overburden rate by poverty status - below 60% of median equivalised income (%)

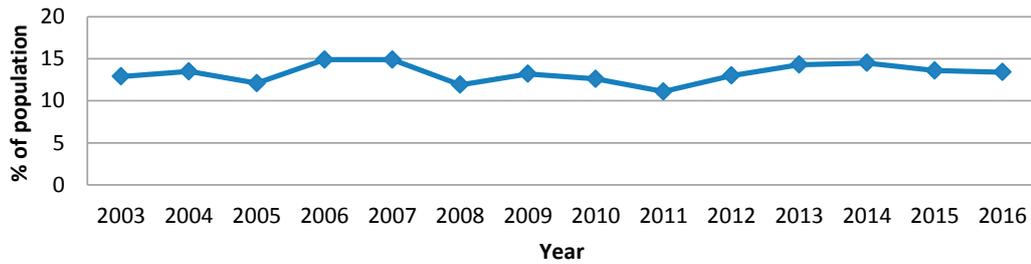

Housing cost overburden rate by poverty status - above 60% of median equivalised income (%)

Annex II: Ireland's 2030 Vision

Meaningful implementation of the SDGs at the national level requires that each country, guided by the level of global ambition reflected in the Goals, defines what constitutes successful achievement of the SDGs in light of its national circumstances.

As a highly developed country with a deep commitment to global cooperation and to the SDGs in particular, Ireland has an ambitious vision for achieving the Goals by 2030.

Our 2030 vision for Ireland is of a country:

- ▶ defined by its commitment to ensuring that all citizens have the opportunity to reach their full potential at every stage of their lives;
- ▶ that is just, equitable and socially inclusive, that protects its most vulnerable citizens and where no citizen, regardless of gender, age, family status, civil status, sexual orientation, race, disability, religion or membership of the Traveller Community faces discrimination or barriers to their full participation in society;
- ▶ that plans for and accommodates its growing population in a manner that sustainably fosters, enhances and integrates existing and new communities, that improves our quality of life and the quality of our shared environment and that provides tailored housing supports and State assistance in ensuring access to good quality, safe homes for its residents;
- ▶ where a robust national economy delivers shared prosperity, sustainable growth and decent jobs and, together with sustainable management of the public finances, provides the funding to pay for comprehensive services and public investment;
- ▶ that is supported by an effective, resilient and responsive public service that engages with the public in an open and accountable manner to ensure their needs are central to policy development and high-quality service delivery;
- ▶ where the rights of all children and young people are respected, protected and fulfilled; where their voices are heard and where they are supported to realise their maximum potential now and in the future;
- ▶ where older people enjoy a comfortable standard of living, their dignity respected, and they can live independently in their own homes and communities for as long as possible or have equitable access to high-quality long-term residential care where needed;
- ▶ with an education and training system that has become the best in Europe and which; harnesses education to break down barriers for groups at risk of exclusion; delivers a learning experience to highest international standards; equips learners of all ages and capacities to participate and succeed in a changing world; and allows Ireland to be a leader across a broad range of fields, scientific, cultural, enterprise and public service;

- ▶ where people's health and well-being is maximised, by keeping people healthy, reducing health inequalities, providing the healthcare people need, delivering high-quality services, and getting best value from health system resources;
- ▶ that is on-track to achieving a transition to a competitive, low carbon, climate-resilient and environmentally sustainable economy by 2050, while also addressing the issue of energy poverty, supported by investment in renewable energy and sustainable transport, together with improvements in the energy efficiency of the built environment;
- ▶ that protects and preserves its terrestrial, freshwater and marine biodiversity;
- ▶ that has embedded a pattern of sustainable consumption and production in its economic systems;
- ▶ with food production systems which show absolute commitment to the principles of sustainability, and which acknowledges that environmental protection and economic competitiveness are equal and complementary – one will not be achieved at the expense of the other; and
- ▶ that continues to work for a fairer, more just, more secure, more sustainable world, and to promote human rights and fundamental freedoms, disarmament, and international peacekeeping, as well as addressing extreme poverty, hunger and malnutrition.

Annex III: Summary Report of the VNR Stakeholder Consultation Workshop

Chair: Department of Communications, Climate Action and Environment [DCCAIE]

Venue: Government Buildings, Dublin, 14 May 2018.

Workshop Summary

The workshop, organised by DCCAIE, took place in the Italian Room, Government buildings on 14 May 2018, where participants representing national civil society and private sector stakeholder groups attended. The workshop consisted of three main sessions:

- ▶ Introductory presentation and main messages, followed by Q&A;
- ▶ Roundtable breakout discussions; and
- ▶ Report back from roundtables, further Q&A.

DCCAIE provided opening remarks at the workshop and welcomed all participants. The workshop was arranged in order to enable stakeholder consultation on the draft VNR, and to provide a forum for open and interactive discussion between officials and stakeholder representatives on the main messages and substance of the draft report. DCCAIE outlined how feedback received at the workshop would be incorporated into a final draft of the report which would then be submitted to the Senior Officials Group on the SDGs. It was also noted that a high-level summary of the workshop would be included as an annex to the VNR.

DCCAIE presented an overview of the VNR outlining key messages, its structure and progress under each Goal discussing both related data and policy measures. For a number of Goals Ireland's performance is mostly above the EU average including Goal 3 and 4. DCCAIE referred to Goal 8 which speaks to Ireland's strong economic recovery. However where Ireland is progressing less well was also discussed. It was also acknowledged that some indicators may be perceived as inappropriate for national circumstances [e.g. Goal 6 and Goal 11], as the data indicates quite a positive performance but fails to reflect the challenges faced by Ireland in these areas. The issues relating to GDP measurement in an Irish context was also noted.

Department of Foreign Affairs and Trade [DFAT] presented an overview of Ireland's international development and its contribution to a specific set of the Goals 1, 2, 3, 4, 5, 10, 13 and 16. Ireland takes an outcome-based approach to its development work and plays to its strengths with a large portion of its work focused on agriculture and nutrition. Ensuring Ireland's aid is gender sensitive is hugely important and Ireland ranks very high in this area. ODA protection is also a key focus of Ireland. A new White Paper on international development policy will be published this year which will build on Ireland's existing development cooperation programme and further strengthen its alignment to the SDGs.

Following the presentations, there was a question and answer session from the floor. In their interventions, participants thanked officials for their presentations and sought clarification on some information presented and also recommended areas where further information should be provided which included:

- ▶ The need to expand and widen the set of **indicators used** and broaden scope to use tier 2 and 3 data sets.
- ▶ Some felt the **high-level comparator** to EU-28 to be misleading and recommended to compare against EU-15 instead as a more appropriate peer group.
- ▶ Welcomed the disclosure on issues faced with GDP figures in Ireland but believed should instead go further and use **GNI*** for all data sets.
- ▶ It was also noted there are issues with the **indicators and reporting around women's** role and lack of recognition, and also women's rights needs to be looked at and addressed.
- ▶ Reflecting on Ireland's implementation across both global and national level was welcomed, however a third layer which the **external dimension of national implementation** was requested.
- ▶ Some participants felt the report needs to **strengthen the multilateral aspect** of implementation, and include actions of civil society and also initiatives which are government funded.
- ▶ A number spoke about the interconnectedness **of the Goals** which they felt did not come out strongly enough.
- ▶ The importance of **policy coherence** was underlined and sought information on how Government intends to address tensions that exist across policies.

DCCAE addressed and responded to questions as they were raised while DFAT responded to global aspects. DCCAE committed to raise sector specific points with relevant government departments. DCCAE also noted, that for some areas, development is still in the early stages, such as addressing internal policy tensions that exist across the SDGs. It was also acknowledged that a more extensive public consultation for the VNR would have been preferable and committed to improve on this for the next reporting period.

Session two involved roundtable breakout discussions where participants were grouped in tables of ten with three questions to discuss:

1. *What are your views on the proposed main messages in the VNR?*
2. *Do you see gaps in the draft VNR as presented?*
3. *Do you have specific feedback regarding individual SDGs?*

Following the lunchbreak, the rapporteurs presented the key findings from their table to the workshop in Session three.

All groups revealed difficulty in providing comprehensive feedback without adequate time to consider or see a full draft report. However from what they learned from the morning session, some commented that the report seems to provide a genuine attempt to answer to its commitments and international reporting requirements. However some groups also expressed concerns that the messaging may be too positive and overstate the economic recovery. The importance of the VNR speaking to and engaging with the public in a clear manner was underlined. They also felt that the VNR should go beyond stating what policies exist and must focus more on implementation, the quality of implementation and its results. Many felt the VNR fails to provide a future vision which should set this ambition and should be in the main messages. The 'leave no one behind' principle was identified and recommended to be incorporated more throughout the text but in particular in the main messages.

Specific areas which were identified as needing to be strengthened included:

The urgency in tackling climate change was mentioned as an area to be strengthened along with the environment sector more generally, but commented that the social pillar seemed to be well reflected.

The importance of partnerships for effective implementation, including reference to existing structures, was highlighted.

Participants welcomed the reference to inequalities that exist but the divide between rural and urban areas was identified as specific area that should also be outlined.

It was noted more attention and narrative on the interconnectivity of the Goals should be included.

The need for a robust policy coherence mechanism in implementing the Goals was also highlighted. Communications and awareness around the Goals was cited as deserving more attention in the report.

Some concerns were raised that the VNR would be too 'government focused', and recommended that it incorporate more on the actions of local government, civil society and community led groups.

Stakeholder also consider that reference to the 0.7% ODA target should feature in VNR and that Ireland should consider if its domestic and international policy approaches aligned, particularly in relation to human rights issues.

In response to the feedback provided DCCAE again expressed regret that the full report was not available but reassured participants that many of the points and topics raised are included in the full text and where there are omissions these would be brought to the attention of the SDG Interdepartmental Working Group to consider.

Annex IV: SDG Policy Map

| Goals and Targets | | DEPT | Relevant National Policy | |
|--|---|-------|--|--|
| Goal 1. End poverty in all its forms everywhere | | | | |
| 1.1 | By 2030, eradicate extreme poverty for all people everywhere, currently measured as people living on less than \$1.25 a day | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| | | DFIN | Ongoing engagement with IFIs | |
| 1.2 | By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions | DEASP | <i>National Action Plan for Social Inclusion</i> | |
| 1.3 | Implement nationally appropriate social protection systems and measures for all, including floors, and by 2030 achieve substantial coverage of the poor and the vulnerable | DEASP | <i>National Action Plan for Social Inclusion</i> | |
| 1.4 | By 2030, ensure that all men and women, in particular the poor and the vulnerable, have equal rights to economic resources, as well as access to basic services, ownership and control over land and other forms of property, inheritance, natural resources, appropriate new technology and financial services, including microfinance | DFIN | Ongoing engagement with IFIs | |
| 1.5 | By 2030, build the resilience of the poor and those in vulnerable situations and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters | DHPLG | <i>Rebuilding Ireland Action Plan for Housing and Homelessness</i> | |
| 1.a | Ensure significant mobilization of resources from a variety of sources, including through enhanced development cooperation, in order to provide adequate and predictable means for developing countries, in particular least developed countries, to implement programmes and policies to end poverty in all its dimensions. | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| | | DFIN | Ongoing Engagement with IFIs | |

| | National Policy Key Objective |
|--|--|
| | |
| | <p><i>One World, One Future's</i> Goal #1 Reduced hunger, stronger resilience, Goal #2 Sustainable development, inclusive economic growth, Goal #3 Better governance, human rights and accountability.</p> |
| | |
| | |
| | <p>National Social Target for Poverty Reduction.</p> |
| | <p>National Social Target for Poverty Reduction.</p> |
| | |
| | <p>Pillar 1 and 2 of Action Plan is to increase supply and services to meet the social housing needs of households including those at risk of or experiencing homelessness.</p> |
| | <p><i>One World One Future's</i> Goal #1 Reduced hunger, stronger resilience, Goal #2 Sustainable development, inclusive economic growth, Goal #3 Better governance, human rights and accountability.</p> |
| | |
| | <p>Cooperation between Multilateral Development Banks is encouraged to maximise the resources available and ensure their efficient allocation.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|---|---|------|--|--|
| 1.b | Create sound policy frameworks at the national, regional and international levels, based on pro-poor and gender-sensitive development strategies, to support accelerated investment in poverty eradication actions | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| | | DFIN | Ongoing Engagement with IFIs | |
| Goal 2. | | | | |
| End hunger, achieve food security and improved nutrition and promote sustainable agriculture | | | | |
| 2.1 | By 2030, end hunger and ensure access by all people, in particular the poor and people in vulnerable situations, including infants, to safe, nutritious and sufficient food all year round | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 2.2 | By 2030, end all forms of malnutrition, including achieving, by 2025, the internationally agreed targets on stunting and wasting in children under 5 years of age, and address the nutritional needs of adolescent girls, pregnant and lactating women and older persons | DoH | <i>A Healthy Weight for Ireland – Obesity Policy and Action Plan 2016-2025</i> | |
| 2.3 | By 2030, double the agricultural productivity and incomes of small-scale food producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through secure and equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 2.4 | By 2030, ensure sustainable food production systems and implement resilient agricultural practices that increase productivity and production, that help maintain ecosystems, that strengthen capacity for adaptation to climate change, extreme weather, drought, flooding and other disasters and that progressively improve land and soil quality | DAFM | <i>Elements covered by the National Biodiversity Action Plan 2017-2021</i> | |
| | | | <i>Food Wise 2025</i> | |
| | | | <i>Rural Development Programme 2014-2020</i> | |

| | National Policy Key Objective |
|--|---|
| | <p><i>One World One Future's</i> Goal #1 Reduced hunger, stronger resilience, Goal #2 Sustainable development, inclusive economic growth, Goal #3 Better governance, human rights and accountability.</p> |
| | |
| | |
| | |
| | <p><i>One World, One Future's</i> Goal #1 Reduced hunger, stronger resilience.</p> |
| | |
| | <p>A sustained downward trend (averaging 0.5% per annum as measured by the Healthy Ireland Survey) in the level of excess weight averaged across all adults; a sustained downward trend (averaging 0.5% per annum as measured by Child Obesity Surveillance Ireland (COSI)) in the level of excess weight in children; and a reduction in the gap in obesity levels between the highest and lowest socioeconomic groups by 10%, as measured by the Healthy Ireland and COSI surveys.</p> |
| | <p><i>One World, One Future's</i> Goal #1 Reduced hunger, stronger resilience.</p> |
| | |
| | <p>Conserve and restore biodiversity and ecosystem services in the wider countryside.</p> |
| | <p>For Ireland to be a global leader in sustainable food production building on our national advantages, specific objectives articulated in the Strategy.</p> |
| | <p>For Ireland to be a global leader in sustainable food production building on our national advantages, specific objectives articulated in the Strategy.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|--|---|------|--|--|
| 2.5 | By 2020, maintain the genetic diversity of seeds, cultivated plants and farmed and domesticated animals and their related wild species, including through soundly managed and diversified seed and plant banks at the national, regional and international levels, and promote access to and fair and equitable sharing of benefits arising from the utilization of genetic resources and associated traditional knowledge, as internationally agreed | DAFM | National Genetic Conservation Strategies for animals and plants. <i>National Biodiversity Action Plan 2017-2021</i> <i>Rural Development Programme 2014-2020</i> | |
| 2.a | Increase investment, including through enhanced international cooperation, in rural infrastructure, agricultural research and extension services, technology development and plant and livestock gene banks in order to enhance agricultural productive capacity in developing countries, in particular least developed countries | DFAT | <i>One World, One Future</i> <i>The Global Island</i> | |
| 2.b | Correct and prevent trade restrictions and distortions in world agricultural markets, including through the parallel elimination of all forms of agricultural export subsidies and all export measures with equivalent effect, in accordance with the mandate of the Doha Development Round | DAFM | World Trade Organisation (WTO) Export Competition Ministerial Decision of 19 December 2015, the 'Nairobi Package', WT/MIN(15)/45 WT/L/980 | |
| 2.c | Adopt measures to ensure the proper functioning of food commodity markets and their derivatives and facilitate timely access to market information, including on food reserves, in order to help limit extreme food price volatility | DAFM | Food Wise Strategic Blueprint for Agri-Food Sector | |
| Goal 3. | | | | |
| Ensure healthy lives and promote well-being for all at all ages | | | | |
| 3.1 | By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births | DFAT | <i>One World, One Future</i> <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|--|
| | |
| | Conserve and restore biodiversity and ecosystem services in the wider countryside. |
| | Conservation and sustainable use of genetic resources for food and agriculture. |
| | <i>One World One Future's</i> Goal #1 Reduced hunger, stronger resilience. |
| | |
| | Ireland works with the European Commission and Member State colleagues to ensure elimination of export subsidies in accordance with the agreement struck at the WTO Ministerial Conference in Nairobi in 2015. |
| | To ensure up-to-date and timely provision of relevant data to the CSO and European Commission in line with EU legislative requirements. |

| | <p>Increase the proportion of people who are healthy at all stages of life.</p> <p>Reduce health inequalities.</p> <p>Protect the public from threats to health and well-being.</p> <p>Create an environment where every individual and sector of society can play their part in achieving a healthy Ireland.</p> |
| | <p>The strategy is focused on preventing cancer across our population, diagnosing cancer early, providing optimal care to patients and maximising their quality of life.</p> |
| | <p>The aim of the <i>National Physical Activity Plan</i> is to increase physical activity levels across the entire population thereby improving the health and well-being of people living in Ireland, where everybody will be physically active and where everybody lives, works and plays in a society that facilitates, promotes and supports physical activity and an active way of life with less time spent being sedentary.</p> |
| | <ol style="list-style-type: none"> 1. To improve the understanding of, and attitudes to, suicidal behaviour, mental health and well-being. 2. To support local communities' capacity to prevent and respond to suicidal behaviour. 3. To target approaches to reduce suicidal behaviour and improve mental health among priority groups. 4. To enhance accessibility, consistency and care pathways of services for people vulnerable to suicidal behaviour. 5. To ensure safe and high-quality services for people vulnerable to suicide. 6. To reduce and restrict access to means of suicidal behaviour. 7. To improve surveillance, evaluation and high-quality research relating to suicidal behaviour. |
| | <p>Promote and protect health and well-being.</p> <p>Minimise the harms caused by the use and misuse of substances and promote rehabilitation and recovery.</p> <p>Address the harms of drug markets and reduce access to drugs for harmful use.</p> <p>Support participation of individuals, families and communities.</p> <p>Develop sound and comprehensive evidence-informed policies and actions.</p> |
| | <p>The objective of the Bill is to reduce alcohol consumption in Ireland to the OECD average of 9.1 litres of pure alcohol per capita, by 2020.</p> |
| | <p>To reduce road crash fatalities from 186 in 2011 to 124 or fewer by 2020.</p> |
| | <p>To ensure everyone in Ireland will receive comprehensive and age-appropriate sexual health education/information and will have access to appropriate prevention and promotion services;</p> <p>Equitable, accessible and high-quality sexual health services, which are targeted and tailored to need, will be available to everyone; and</p> <p>Robust and high-quality sexual health information will be generated to underpin policy, practice, service planning and strategic monitoring.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|--|--------|---|--|
| 3.8 | Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all | DoH | Government Response to the Report of the Committee on the Future of Healthcare. Sláintecare Report 2017-2026. [Currently under development] | |
| 3.9 | By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination | DBEI | Chemicals Act 2008 | |
| | | DCCAIE | Waste Management Policy, Legislation and National Implementation Plan on Persistent Organic Pollutants | |
| | | | <i>National Clean Air Strategy</i> | |
| 3.a | Strengthen the implementation of the World Health Organization Framework Convention on Tobacco Control in all countries, as appropriate | DoH | <i>Tobacco Free Ireland 2013-2025</i> | |
| 3.b | Support the research and development of vaccines and medicines for the communicable and non-communicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade-Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|---|
| | To ensure that, in future, everyone has access to an affordable, universal, single-tier healthcare system, in which patients are treated promptly on the basis of need, rather than ability to pay. |
| | <p>The main purpose of the 2008 Act is to facilitate the enforcement of certain EU Regulations concerning chemicals. These Regulations include the:</p> <ul style="list-style-type: none"> ▶ REACH Regulation; ▶ Classification, Labelling and Packaging of Substances and Mixtures (CLP) Regulation; ▶ Rotterdam Regulation concerning the export and import of dangerous chemicals under the Rotterdam Convention; and the ▶ Detergents Regulation. |
| | Comprehensive policy (2012 'A Resource Opportunity') and legislation to ensure that the disposal and recovery of waste does not present a risk to water, air, soil, plants, human health and animals. Legislation also sets a general duty on everyone not to hold, transport, recover or dispose of waste in a manner that causes or is likely to cause environmental pollution. Implementing legislation covers national priorities in addition to EU and international obligations. |
| | This Strategy will provide the framework to promote and identify a range of measures across government policy required to reduce air pollution and promote cleaner air while delivering on wider national and international objectives. |
| | To reduce smoking prevalence to less than 5% by 2025. |

| | | | <i>The Global Island</i> | |
| Goal 5. | | | | |
| Achieve gender equality and empower all women and girls | | | | |
| 5.1 | End all forms of discrimination against all women and girls everywhere | DJE | <i>National Strategy for Women and Girls 2017-2020 (NSWG)</i> | |
| 5.2 | Eliminate all forms of violence against all women and girls in the public and private spheres, including trafficking and sexual and other types of exploitation | DJE | <i>Second National Strategy on Domestic, Sexual and Gender-based Violence 2016-2021</i> | |
| | | | <i>Second National Action Plan to Prevent and Combat Trafficking in Human Beings 2016</i> | |
| 5.3 | Eliminate all harmful practices, such as child, early and forced marriage and female genital mutilation | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 5.4 | Recognize and value unpaid care and domestic work through the provision of public services, infrastructure and social protection policies and the promotion of shared responsibility within the household and the family as nationally appropriate | DJE | <i>National Strategy for Women and Girls 2017-2020</i> | |
| 5.5 | Ensure women's full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic and public life | DJE | <i>National Strategy for Women and Girls 2017-2020</i> | |
| 5.6 | Ensure universal access to sexual and reproductive health and reproductive rights as agreed in accordance with the Programme of Action of the International Conference on Population and Development and the Beijing Platform for Action and the outcome documents of their review conferences | DoH | <i>The National Sexual Health Strategy 2015-2020</i> | |
| | | DJE | <i>National Strategy for Women and Girls 2017-2020</i> | |

| | National Policy Key Objective |
|--|--|
| | <i>One World, One Future</i> – Priority Action Area 5 Essential Services. |
| | |
| | |
| | The overall goal of the NSWG is “to change attitudes and practices preventing women’s and girls’ full participation in education, employment and public life at all levels, and to improve services for women and girls, with priority given to the needs of those experiencing, or at risk of experiencing, the poorest outcomes”. |
| | To change societal attitudes, to hold perpetrators to account and to improve the support that is available to victims. |
| | Continued development of structures to identify and support victims of trafficking and prosecute those responsible. |
| | <i>One World One Future</i> – Goal #3 Better governance, human rights and accountability. |
| | |
| | High-Level Objective 1: Advance socio-economic equality for women and girls. |
| | High-Level Objective 4: Advance women in leadership at all levels. |
| | Everyone in Ireland will receive comprehensive and age-appropriate sexual health education/ information and will have access to appropriate prevention and promotion services; Equitable, accessible and high-quality sexual health services, which are targeted and tailored to need, will be available to everyone; and Robust and high-quality sexual health information will be generated to underpin policy, practice, service planning and strategic monitoring. |
| | An Ireland where all women enjoy equality with men and can achieve their full potential, while enjoying a safe and fulfilling life. |

| Goals and Targets | | DEPT | Relevant National Policy | |
|---|---|-------|---|--|
| 5.a | Undertake reforms to give women equal rights to economic resources, as well as access to ownership and control over land and other forms of property, financial services, inheritance and natural resources, in accordance with national laws | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 5.b | Enhance the use of enabling technology, in particular information and communications technology, to promote the empowerment of women | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 5.c | Adopt and strengthen sound policies and enforceable legislation for the promotion of gender equality and the empowerment of all women and girls at all levels | DJE | <i>National Strategy for Women and Girls 2017-2020</i> | |
| Goal 6. | | | | |
| Ensure availability and sustainable management of water and sanitation for all | | | | |
| 6.1 | By 2030, achieve universal and equitable access to safe and affordable drinking water for all | DHPLG | <i>River Basin Management Plan (2018-2021)</i> <i>Water Services Policy Statement 2018</i> | |
| 6.2 | By 2030, achieve access to adequate and equitable sanitation and hygiene for all and end open defecation, paying special attention to the needs of women and girls and those in vulnerable situations | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|--|
| | To guide transition to a low carbon energy system, which provides secure supplies of competitive and affordable energy to our citizens and businesses. |
| | To provide clarity on policies and measures that are part of a framework for actions across the electricity generation sector to achieve a low carbon electricity sector by 2050. |
| | To maximise progress to the target of improving national energy efficiency by 20% by 2020. |
| | Ireland has a target of a 20% improvement in energy efficiency by 2020. New targets for 2030 will be set by the end of 2018. |
| | <i>One World, One Future</i> – Priority Action Area 3 Climate Change and Development. |
| | |
| | <i>One World, One Future</i> – Priority Action Area 3 Climate Change and Development. |
| | |
| | |
| | These measures will incentivise labour market participation, assist small-to-medium enterprise in accessing funding, continue to attract foreign direct investment and safeguard our public finances. |
| | |
| | <i>Innovation 2020</i> sets out the roadmap for continuing progress towards the goal of making Ireland a Global Innovation Leader, driving a strong sustainable economy and a better society. |
| | <i>The National Broadband Plan</i> aims to deliver high speed broadband to every citizen and business in Ireland. This is being achieved through a combination of accelerated commercial investment by telecoms operators, and a proposed State intervention to provide high speed broadband to those parts of the country where there is no certainty that the commercial sector will invest. |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|--|----------------|---|--|
| 8.3 | Promote development-oriented policies that support productive activities, decent job creation, entrepreneurship, creativity and innovation, and encourage the formalization and growth of micro-, small- and medium-sized enterprises, including through access to financial services | DBEI | <i>Enterprise 2025 Renewed</i> | |
| 8.4 | Improve progressively, through 2030, global resource efficiency in consumption and production and endeavour to decouple economic growth from environmental degradation, in accordance with the 10-year framework of programmes on sustainable consumption and production, with developed countries taking the lead | DCCAE | <i>A Resource Opportunity 2012</i> | |
| 8.5 | By 2030, achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value | DBEI | <i>Action Plan for Jobs</i> | |
| 8.6 | By 2020, substantially reduce the proportion of youth not in employment, education or training | DEASP | <i>Action Plan for Jobs;</i> <i>Pathways to Work</i> | |
| | | | Various Youth programmes and Youth Employability initiative | |
| 8.7 | Take immediate and effective measures to eradicate forced labour, end modern slavery and human trafficking and secure the prohibition and elimination of the worst forms of child labour, including recruitment and use of child soldiers, and by 2025 end child labour in all its forms | DFAT/DJE | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 8.8 | Protect labour rights and promote safe and secure working environments for all workers, including migrant workers, in particular women migrants, and those in precarious employment | DEASP/ DBEI | <i>Action Plan for Jobs</i> | |
| 8.9 | By 2030, devise and implement policies to promote sustainable tourism that creates jobs and promotes local culture and products | DTTAS | <i>People, Place and Policy: Growing Tourism to 2025</i> | |

| | National Policy Key Objective |
|--|---|
| | <i>Enterprise 2025 Renewed</i> is Ireland's national enterprise strategy. It sets out the ambition for Ireland in 2025 to be the best place to succeed in business delivering sustainable employment and higher standards of living for all. |
| | National Waste Prevention Programme. |
| | <i>The Action Plan for Jobs</i> is a whole-of-Government initiative under which Government Departments and Agencies work to support job creation. |
| | National employment rate target under EU 2020. |
| | Increase soft skills of young people to assist them in terms of their employability. |
| | Goal #3 Better governance, human rights and accountability. |
| | |
| | <i>The Action Plan for Jobs</i> is a whole-of-Government initiative under which Government Departments and Agencies work to support job creation. |
| | By 2025, ensure revenue from overseas visitors, excluding carrier receipts, will increase to €5 billion in real terms. Employment in the tourism sector will be 250,000 by 2025, compared with around 200,000 in 2015. There will be 10 million visits to Ireland annually by 2025. |

| Goals and Targets | | DEPT | Relevant National Policy | |
|--|---|--------------|---|--|
| 8.10 | Strengthen the capacity of domestic financial institutions to encourage and expand access to banking, insurance and financial services for all | DFIN | Establishment of the Cost of Insurance Working Group by Minister for Finance, and associated reports and action plans | |
| 8.a | Increase Aid for Trade support for developing countries, in particular least developed countries, including through the Enhanced Integrated Framework for Trade-Related Technical Assistance to Least Developed Countries | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 8.b | By 2020, develop and operationalize a global strategy for youth employment and implement the Global Jobs Pact of the International Labour Organization | DEASP / DBEI | <i>Action Plan for Jobs</i> | |
| | | | <i>Pathways to Work</i> | |
| Goal 9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation | | | | |
| 9.1 | Develop quality, reliable, sustainable and resilient infrastructure, including regional and transborder infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all | DPER | <i>Building on Recovery: Infrastructure and Capital Investment 2016-2021</i> | |
| 9.2 | Promote inclusive and sustainable industrialization and, by 2030, significantly raise industry's share of employment and gross domestic product, in line with national circumstances, and double its share in least developed countries | DBEI | <i>Enterprise 2025 Renewed</i> | |
| 9.3 | Increase the access of small-scale industrial and other enterprises, in particular in developing countries, to financial services, including affordable credit, and their integration into value chains and markets | DFIN | Strategic Banking Corporation of Ireland (SBCI) | |
| 9.4 | By 2030, upgrade infrastructure and retrofit industries to make them sustainable, with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes, with all countries taking action in accordance with their respective capabilities | DPER | <i>Building on Recovery: Infrastructure and Capital Investment 2016-2021</i> | |

|---|--|------|---|--|
| 9.5 | Enhance scientific research, upgrade the technological capabilities of industrial sectors in all countries, in particular developing countries, including, by 2030, encouraging innovation and substantially increasing the number of research and development workers per 1 million people and public and private research and development spending | DBEI | <i>Innovation 2020</i> | |
| 9.a | Facilitate sustainable and resilient infrastructure development in developing countries through enhanced financial, technological and technical support to African countries, least developed countries, landlocked developing countries and small island developing States. | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 9.b | Support domestic technology development, research and innovation in developing countries, including by ensuring a conducive policy environment for, inter alia, industrial diversification and value addition to commodities | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 9.c | Significantly increase access to information and communications technology and strive to provide universal and affordable access to the Internet in least developed countries by 2020 | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| Goal 10. | | | | |
| Reduce inequality within and among countries | | | | |
| 10.1 | By 2030, progressively achieve and sustain income growth of the bottom 40 per cent of the population at a rate higher than the national average | DFIN | <i>Updated National Action Plan for Social Inclusion, 2015-2017</i> | |
| 10.2 | By 2030, empower and promote the social, economic and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status | DJE | Every Government policy, including <i>The National Strategy for Women and Girls, 2017-2020, National Disability Inclusion Strategy, National Traveller and Roma Inclusion Strategy and Migrant Integration Strategy</i> | |

| | National Policy Key Objective |
|--|---|
| | <p>The Strategy is aimed at building on existing infrastructures and achieving ambitious private-public collaborations. A key ambition of the Strategy is to increase total investment in Research and Development in Ireland, led by the private sector, to 2.5% of GNP.</p> |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | <p>Key plan objective is to reduce consistent poverty to 2 per cent or less by 2020, from the 2010 baseline rate of 6.3 per cent.</p> |
| | <p>Reduce and remove barriers to inclusion and participation.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|--|------|--|--|
| 10.3 | Ensure equal opportunity and reduce inequalities of outcome, including by eliminating discriminatory laws, policies and practices and promoting appropriate legislation, policies and action in this regard | DJE | Equal Status Act, Employments Equality Act, European Convention on Human Rights Act and all current strategies. No single strategy. | |
| 10.4 | Adopt policies, especially fiscal, wage and social protection policies, and progressively achieve greater equality | DFIN | <i>Updated National Action Plan for Social Inclusion, 2015-2017</i> | |
| 10.5 | Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations | DFIN | Finance Statement of Strategy, 2017-2020 | |
| 10.6 | Ensure enhanced representation and voice for developing countries in decision-making in global international economic and financial institutions in order to deliver more effective, credible, accountable and legitimate institutions | DFIN | Ongoing Engagement with IFIs | |
| 10.7 | Facilitate orderly, safe, regular and responsible migration and mobility of people, including through the implementation of planned and well-managed migration policies | DJE | Department of Justice's 2015-2017 Statement of Strategy on 'An Efficient, Responsive and Fair Immigration, Asylum and Citizenship System'. | |
| 10.a | Implement the principle of special and differential treatment for developing countries, in particular least developed countries, in accordance with World Trade Organization agreements | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 10.b | Encourage official development assistance and financial flows, including foreign direct investment, to States where the need is greatest, in particular least developed countries, African countries, small island developing States and landlocked developing countries, in accordance with their national plans and programmes | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 10.c | By 2030, reduce to less than 3 per cent the transaction costs of migrant remittances and eliminate remittance corridors with costs higher than 5 per cent | DFIN | Payment Services Directive – at EU level | |

| | National Policy Key Objective |
|--|--|
| | Reduce and remove barriers to inclusion and participation. |
| | Key plan objective is to reduce consistent poverty to 2 per cent or less by 2020, from the 2010 baseline rate of 6.3 per cent. |
| | A balanced and equitable economy enabled by a vibrant, secure and well-regulated financial sector. |
| | Engage in shareholding discussions at the IMF and World Bank Group to ensure that developing countries continue to increase their voice and representation at such insitutions. |
| | A balanced migration policy that supports our economy and meets our international and humanitarian obligations, whilst also taking a tough approach to tackling illegal migration. |
| | |
| | |
| | |
| | |
| | Payment Services Directive extends existing rules on transparency to cover payments outside the EU but only as regards the “EU part” of the transaction. |

| 12.8 | By 2030, ensure that people everywhere have the relevant information and awareness for sustainable development and lifestyles in harmony with nature | DCCAIE | <i>Our Sustainable Future</i> | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 12.a | Support developing countries to strengthen their scientific and technological capacity to move towards more sustainable patterns of consumption and production | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|---|
| | Research projects that are aimed at reducing food waste. |
| | Waste Prevention. |
| | <p>The main purpose of the 2008 Act is to facilitate the enforcement of certain EU Regulations concerning chemicals. These Regulations include the:</p> <ul style="list-style-type: none"> ▶ REACH Regulation; ▶ CLP Regulation; ▶ Rotterdam Regulation concerning the export and import of dangerous chemicals under the Rotterdam Convention; and the ▶ Detergents Regulation. |
| | <p>Comprehensive policy (2012 'A Resource Opportunity') and legislation to ensure that the disposal and recovery of waste does not present a risk to water, air, soil, plants, human health and animals. Legislation also sets a general duty on everyone not to hold, transport, recover or dispose of waste in a manner that causes or is likely to cause environmental pollution. Implementing legislation covers national priorities in addition to EU and international obligations.</p> |
| | <p>This Strategy will provide the framework to promote and identify a range of measures across government policy required to reduce air pollution and promote cleaner air while delivering on wider national and international objectives.</p> |
| | National Waste Prevention Programme. |
| | <p>It is the Government's vision that Ireland will be recognised as a centre of excellence for responsible and sustainable business practices through the adoption and implementation of best practice in CSR in enterprises and organisations.</p> |
| | <p><i>Green Tenders</i> objective – commits the public sector to playing an exemplary sustainability role through its procurement activities. There are eight priority sectors identified for GPP implementation in Ireland, and this Plan adopts a target for 50% of procurement in these sectors (both by number of contracts and by value) to include at least core GPP criteria.</p> |
| | Education, Communications and Behaviour Change. |
| | Increase awareness and appreciation of biodiversity and ecosystems services. |
| | |
| | |

| Goals and Targets | | DEPT | Relevant National Policy | |
|--|--|-------|--|--|
| 12.b | Develop and implement tools to monitor sustainable development impacts for sustainable tourism that creates jobs and promotes local culture and products | DTTAS | <i>People, Place and Policy: Growing Tourism to 2025</i> | |
| 12.c | Rationalize inefficient fossil-fuel subsidies that encourage wasteful consumption by removing market distortions, in accordance with national circumstances, including by restructuring taxation and phasing out those harmful subsidies, where they exist, to reflect their environmental impacts, taking fully into account the specific needs and conditions of developing countries and minimizing the possible adverse impacts on their development in a manner that protects the poor and the affected communities | DCCAЕ | <i>National Mitigation Plan</i> | |
| Goal 13. | | | | |
| Take urgent action to combat climate change and its impacts | | | | |
| 13.1 | Strengthen resilience and adaptive capacity to climate-related hazards and natural disasters in all countries | DCCAЕ | <i>National Adaptation Framework</i> | |

| | National Policy Key Objective |
|--|--|
| | <p>Government will place tourism as a key element of its economic strategy, with development in the tourism sector reflecting the highest standards of environmental and economic sustainability.</p> |
| | <p>Fossil fuel subsidies have the potential to make consumption of fossil fuels more attractive relative to other, more sustainable alternatives. Internationally, the need to phase out fossil fuel subsidies has been recognised particularly by the G20. Where subsidies exist, either directly or indirectly, they may be aimed at addressing other policy objectives rather than simply promoting the use of fossil fuels. The range of subsidies that are in place in Ireland need to be identified in order to inform a future strategy for addressing such subsidies where they have the potential to act as a barrier to decarbonisation. As a sign of Government commitment to this policy, Public Service Obligation (PSO) support for Bord na Móna Edenderry peat-fired generation station expired in December 2015. PSO support for the ESB owned West Offaly and Lough Ree power stations will expire in December 2019. Thereafter, security of supply subsidies for electricity generated from peat will no longer be supported under the PSO.</p> <p>National Mitigation Plan Proposal: Prepare a report identifying fossil fuel subsidies in place for consideration by Government. Lead Department: Department of Communications, Climate Action and Environment. Stakeholders: D/Finance, DPER, EPA, all relevant Government Departments Timeline: 2019</p> |
| | |
| | <p>This Framework aims to strengthen adaptative capacity and to support the transition towards a climate resilient Ireland by 2050 and also includes support adaptation action at sectoral and local level.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|---|------|--|--|
| 13.2 | Integrate climate change measures into national policies, strategies and planning | DPER | <i>Building on Recovery: Infrastructure and Capital Investment 2016-2021</i> | |
| | | DCCA | <i>National Mitigation Plan</i> | |
| | | | <i>National Biodiversity Action Plan 2017-2021</i> | |
| | | | <i>National Adaptation Framework</i> | |
| | | | <i>National Policy Position on Climate Action and Low Carbon Development</i> | |

| | National Policy Key Objective |
|--|---|
| | |
| | <p>Ireland's first <i>National Mitigation Plan</i> sets out this Government's shared approach to reducing our own greenhouse gas emissions. This is a whole-of-Government Plan, reflecting in particular the central roles of the key Ministers responsible for the sectors covered by the Plan – Electricity Generation, the Built Environment, Transport and Agriculture, as well as drawing on the perspectives and responsibilities of a range of other Government Departments. The measures that are and will be implemented through this <i>National Mitigation Plan</i> will lay the foundations for transitioning Ireland to a low carbon, climate resilient and environmentally sustainable economy by 2050. This <i>National Mitigation Plan</i> sets out our vision to achieve this transition in which each and every one of us has a role to play as we work to build this future.</p> |
| | |
| | <p>This Framework specifies the strategy for adaptation measures in different sectors and by local authorities to reduce the vulnerability of the State to the negative effects of climate change and to avail of any positive effects that may occur. This Framework and its successors will set out the context to ensure local authorities, regions and key sectors can assess the key risks and vulnerabilities of climate change, implement climate resilience actions and ensure climate adaptation considerations are mainstreamed into all local, regional and national policy-making.</p> |
| | <p>This provides a high-level policy direction for the adoption and implementation by Government of plans to enable the State to move to a low carbon economy by 2050.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |

| 13.3 | Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning | DCCAIE | <i>National Strategy on Education for Sustainable Development in Ireland 2014-2020</i> | |
| | | | <i>National Mitigation Plan</i> | |
| | | | <i>National Adaptation Framework</i> | |
| | | | <i>National Policy Position on Climate Action and Low Carbon Development</i> | |
| 13.a | Implement the commitment undertaken by developed-country parties to the United Nations Framework Convention on Climate Change to a goal of mobilizing jointly \$100 billion annually by 2020 from all sources to address the needs of developing countries in the context of meaningful mitigation actions and transparency on implementation and fully operationalize the Green Climate Fund through its capitalization as soon as possible | DCCAIE | Govt. Decision S180/20/10/1660. | |
| | | DFAT | <i>One World, One Future</i> | |
| | | DFIN | Ongoing Engagement with Multilateral Development Bank. | |
| 13.b | Promote mechanisms for raising capacity for effective climate change-related planning and management in least developed countries and small island developing States, including focusing on women, youth and local and marginalized communities | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|---|
| | |
| | <p>This is a whole-of-Government Plan, reflecting in particular the central roles of the key Ministers responsible for the sectors covered by the Plan – Electricity Generation, the Built Environment, Transport and Agriculture, as well as drawing on the perspectives and responsibilities of a range of other Government Departments. The measures that are and will be implemented will lay the foundations for transitioning Ireland to a low carbon, climate resilient and environmentally sustainable economy by 2050.</p> |
| | <p>This Framework specifies the strategy for adaptation measures in different sectors and by local authorities to reduce the vulnerability of the State to the negative effects of climate change and to avail of any positive effects that may occur. This Framework and its successors will set out the context to ensure local authorities, regions and key sectors can assess the key risks and vulnerabilities of climate change, implement climate resilience actions and ensure climate adaptation considerations are mainstreamed into all local, regional and national policy making.</p> |
| | <p>The extent of the challenge to reduce greenhouse gas emissions, in line with our EU and international commitments, is well understood by Government, as reflected in the National Policy Position on Climate Action and Low Carbon Development, published in April 2014, and in the Climate Action and Low Carbon Development Bill 2015. The National Policy Position provides a high-level policy direction for the adoption and implementation by Government of plans to enable the State to move to a low carbon economy by 2050. Statutory authority for the plans is set out in the Climate Action and Low Carbon Development Act 2015. The evolution of climate policy in Ireland will be an iterative process based on the adoption by Government of a series of national plans over the period to 2050. Greenhouse gas mitigation and adaptation to the impacts of climate change are to be addressed in parallel national plans – respectively through National Mitigation Plans and National Climate Change Adaptation Frameworks.</p> |
| | <p>Ireland has also committed to a number of policy measures in relation to international climate finance, through commitments to the United Nations Framework Convention on Climate Change (UNFCCC), through Government Decision S180/20/10/1660 of 13 January 2016, and under the Programme for a Partnership Government.</p> |
| | <p>The international community has committed to provide \$100 billion per annum by 2020 for climate action in developing countries within the ongoing climate change negotiations. Ireland will maintain its engagement with the UNFCCC and Kyoto Protocol global processes, and strive to meet the obligations arising from these.</p> |
| | <p>Ireland commenced contributions to the Green Climate Fund in 2016.</p> |
| | |
| | |

| Goals and Targets | | DEPT | Relevant National Policy | |
|---|--|-------|---|--|
| Goal 14. | | | | |
| Conserve and sustainably use the oceans, seas and marine resources for sustainable development | | | | |
| 14.1 | By 2025, prevent and significantly reduce marine pollution of all kinds, in particular from land-based activities, including marine debris and nutrient pollution | DHPLG | Water Framework Directive, Marine Strategy Framework Directive and OSPAR Convention (Northeast Atlantic) including High Seas (OSPAR Hazardous Substances and Eutrophication Strategies and Marine Litter Regional Action Plan Apply). | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 14.2 | By 2020, sustainably manage and protect marine and coastal ecosystems to avoid significant adverse impacts, including by strengthening their resilience, and take action for their restoration in order to achieve healthy and productive oceans | DHPLG | Marine Strategy Framework Directive, OSPAR Northeast Atlantic Strategy | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 14.3 | Minimize and address the impacts of ocean acidification, including through enhanced scientific cooperation at all levels | DAFM | <i>Harnessing Our Ocean Wealth, National Climate Adaptation Strategy (2018); Ireland Climate Strategy to 2020 and beyond; OSPAR Northeast Atlantic Environmental Strategy to 2020 and from 2020-2030 (in draft at present); National Marine Research and Innovation Strategy; National Planning Framework Roadmap</i> | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 14.4 | By 2020, effectively regulate harvesting and end overfishing, illegal, unreported and unregulated fishing and destructive fishing practices and implement science-based management plans, in order to restore fish stocks in the shortest time feasible, at least to levels that can produce maximum sustainable yield as determined by their biological characteristics | DAFM | Sea-fisheries and Maritime Jurisdiction Act 2006 and the Fisheries (Amendment Act) 2003 under the Framework of the Common Fisheries Policy (CFP); <i>Food Wise 2025; Harvesting Our Ocean Wealth.</i> | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |

| | National Policy Key Objective |
|--|---|
| | |
| | |
| | Conserve and restore biodiversity and ecosystem services in the marine environment. |
| | Proportion of national exclusive economic zones managed using ecosystem-based approaches. Also OSPAR network of Marine Protected Areas, OSPAR list of threatened and/or declining species and habitats. |
| | Conserve and restore biodiversity and ecosystem services in the marine environment. |
| | Healthy ecosystems – protect and conserve our rich biodiversity and ecosystems. Four year programme researching ocean acidification being undertaken by the Marine Institute to inform policy at national and regional level. |
| | Conserve and restore biodiversity and ecosystem services in the marine environment. |
| | <i>Harvesting Our Ocean Wealth</i> sets out to: achieve healthy ecosystems that provide monetary and non-monetary goods and services; ensure that fishing and aquaculture are environmentally and socially sustainable; foster a dynamic fishing industry and ensure a fair standard of living for fishing communities. |
| | Conserve and restore biodiversity and ecosystem services in the marine environment. |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|--|-------|---|--|
| 14.5 | By 2020, conserve at least 10 per cent of coastal and marine areas, consistent with national and international law and based on the best available scientific information | DHPLG | Marine Strategy Framework Directive, Convention for Biological Diversity Aichi Target 11, OSPAR Northeast Atlantic Environment Strategy (2010-2020) – new strategy to 2030 being drafted. | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 14.6 | By 2020, prohibit certain forms of fisheries subsidies which contribute to overcapacity and overfishing, eliminate subsidies that contribute to illegal, unreported and unregulated fishing and refrain from introducing new such subsidies, recognizing that appropriate and effective special and differential treatment for developing and least developed countries should be an integral part of the World Trade Organization fisheries subsidies negotiation | DAFM | Sea-fisheries and Maritime Jurisdiction Act 2006 and the Fisheries (Amendment Act) 2003 under the Framework of the CFP; <i>Food Wise 2025</i> ; <i>Harvesting Our Ocean Wealth</i> . | |
| | | | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 14.7 | By 2030, increase the economic benefits to Small Island developing States and least developed countries from the sustainable use of marine resources, including through sustainable management of fisheries, aquaculture and tourism | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 14.a | Increase scientific knowledge, develop research capacity and transfer marine technology, taking into account the Intergovernmental Oceanographic Commission Criteria and Guidelines on the Transfer of Marine Technology, in order to improve ocean health and to enhance the contribution of marine biodiversity to the development of developing countries, in particular small island developing States and least developed countries | DAFM | <i>Harnessing Our Ocean Wealth</i> | |
| 14.b | Provide access for small-scale artisanal fishers to marine resources and markets | DAFM | Sea-fisheries and Maritime Jurisdiction Act 2006 and the Fisheries (Amendment Act) 2003 under the Framework of the CFP; <i>Food Wise 2025</i> ; <i>Harvesting Our Ocean Wealth</i> . | |

| | National Policy Key Objective |
|--|--|
| | <p>Marine Strategy Framework Directive commits Member States to creating a coherent and representative network of Marine Protected Areas, The OSPAR network of Marine Protected Areas aims for the relevant Convention on Biological Diversity target of 10% coverage.</p> |
| | <p>Expand and improve management of protected areas and species and conserve and restore biodiversity and ecosystem services in the marine environment.</p> |
| | <p>Ensure that fishing and aquaculture are environmentally and socially sustainable. Foster a dynamic fishing industry and ensure a fair standard of living for fishing communities.</p> |
| | <p>Mainstream biodiversity into decision-making across all sectors.</p> |
| | |
| | |
| | <p>Enabler – to build capacity, education, training and awareness. Ireland is an active member of Intergovernmental Oceanographic Commission and Partnership for Observation of the Global Oceans.</p> |
| | <p>Ensure that fishing and aquaculture are environmentally and socially sustainable. Foster a dynamic fishing industry and ensure a fair standard of living for fishing communities. Harnessing market opportunities in order to build a thriving maritime economy.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|---|--|-------|--|--|
| 14.c | Enhance the conservation and sustainable use of oceans and their resources by implementing international law as reflected in UNCLOS, which provides the legal framework for the conservation and sustainable use of oceans and their resources, as recalled in paragraph 158 of The Future We Want | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| | | DHPLG | Northeast Atlantic. High Seas covered by OSPAR Convention. | |
| Goal 15. | | | | |
| Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss | | | | |
| 15.1 | By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| | | DAFM | United Nations Forum on Forestry | |
| 15.2 | By 2020, promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally | DAFM | <i>National Biodiversity Action Plan 2017-2021</i> | |
| | | | United Nations Forum on Forestry | |
| 15.3 | By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world | DAFM | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.4 | By 2030, ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their capacity to provide benefits that are essential for sustainable development | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.5 | Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and, by 2020, protect and prevent the extinction of threatened species | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.6 | Promote fair and equitable sharing of the benefits arising from the utilization of genetic resources and promote appropriate access to such resources, as internationally agreed | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |

| | National Policy Key Objective |
|--|---|
| | |
| | |
| | |
| | |
| | <p>Conserve and restore biodiversity and ecosystem services in the wider countryside. Expand and improve management of protected areas and species.</p> |
| | <p>Active and fully participating member.</p> |

| | <p>Mainstream biodiversity into decision-making across all sectors.</p> |

| Goals and Targets | | DEPT | Relevant National Policy | |
|--|---|------|--|--|
| 15.7 | Take urgent action to end poaching and trafficking of protected species of flora and fauna and address both demand and supply of illegal wildlife products | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.8 | By 2020, introduce measures to prevent the introduction and significantly reduce the impact of invasive alien species on land and water ecosystems and control or eradicate the priority species | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.9 | By 2020, integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.a | Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and ecosystems | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.b | Mobilize significant resources from all sources and at all levels to finance sustainable forest management and provide adequate incentives to developing countries to advance such management, including for conservation and reforestation | DFAT | <i>One World, One Future</i> <i>The Global Island</i> | |
| | | DFIN | Ongoing Engagement with IFIs. | |
| | | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| 15.c | Enhance global support for efforts to combat poaching and trafficking of protected species, including by increasing the capacity of local communities to pursue sustainable livelihood opportunities | DCHG | <i>National Biodiversity Action Plan 2017-2021</i> | |
| Goal 16. | | | | |
| Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels | | | | |
| 16.1 | Significantly reduce all forms of violence and related death rates everywhere | DJE | <i>An Garda Síochána Policing Plan 2017.</i> <i>An Garda Síochána's Crime Prevention and Reduction Strategy 2017.</i> <i>An Garda Síochána's Modernisation and Renewal Programme 2016-2021.</i> <i>Youth Justice Action Plan 2014-2018.</i> | |

| | National Policy Key Objective |
|--|---|
| | Conserve and restore biodiversity and ecosystem services in the wider countryside. Strengthen international governance for biodiversity and ecosystem services. |
| | Conserve and restore biodiversity and ecosystem services in the wider countryside. |
| | Mainstream biodiversity into decision-making across all sectors. |
| | Mainstream biodiversity into decision-making across all sectors. |
| | |
| | |
| | Strengthen international governance for biodiversity and ecosystem services. |
| | Strengthen international governance for biodiversity and ecosystem services. |
| | |
| | The Mission Statement of An Garda Síochána is “to deliver professional policing and security services with the trust, confidence and support of the people we serve.” |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|---|------|--|--|
| 16.2 | End abuse, exploitation, trafficking and all forms of violence against and torture of children | DJE | <i>Second National Action Plan to Prevent and Combat Trafficking in Human Beings 2016</i> | |
| 16.3 | Promote the rule of law at the national and international levels and ensure equal access to justice for all | DJE | | |
| 16.4 | By 2030, significantly reduce illicit financial and arms flows, strengthen the recovery and return of stolen assets and combat all forms of organized crime | DJE | Ireland's membership of the Financial Action Task Force, an intergovernmental body that sets global standards regarding anti-money laundering and counter-terrorist financing, which are adopted by the EU through the Anti-Money Laundering Directives, the fourth of which Ireland is currently transposing. | |
| 16.5 | Substantially reduce corruption and bribery in all their forms | DJE | The development and implementation of anti-corruption policies does not rest with any one body in this jurisdiction. | |
| | | | Regulation of Lobbying Act 2015 | |
| | | | Protected Disclosures Act 2014 | |
| | | | Public Sector Standards Bill 2015 [Currently before the Oireachtas] | |

| | National Policy Key Objective |
|--|--|
| | Continued development of structures to identify and support victims of trafficking and prosecute those responsible. |
| | |
| | To further strengthen national defences against money laundering and terrorist financing; and ensure the soundness, integrity and stability, and confidence in the financial system as a whole. |
| | The competence to prevent, detect, investigate and prosecute corruption is spread across a number of agencies, including: Council of Europe’s Group of States Against Corruption, OECD Anti Bribery Convention and United Nations Convention against Corruption. There is no overarching national anti-corruption policy document. |
| | Designed to provide appropriate transparency on “who is lobbying whom about what”. It allows all sections of society to reach informed evidence-based judgments regarding the extent to which different interest groups are able to access and influence decision-making. |
| | To provide robust statutory protections for workers in both the public and private sectors against the real or potential penalisation by their employers where they have brought concerns about wrongdoing in the workplace to light. |
| | To significantly enhance the existing framework for identifying, disclosing and managing conflicts of interest and minimising corruption risks, to achieve a shift towards a more dynamic and risk-based system of compliance and to ensure that the institutional framework for oversight, investigation and enforcement is robust and effective. |

| Goals and Targets | | DEPT | Relevant National Policy | |
|-------------------|--|------|--|--|
| 16.6 | Develop effective, accountable and transparent institutions at all levels | DPER | Houses of the Oireachtas (Inquiries, Privileges and Procedures) Act 2013 | |
| | | | Freedom of Information (FOI) Act 2014 | |
| | | | Ombudsman (Amendment) Act 2012 | |
| | | | Corporate Governance Standard for the Civil Service | |
| 16.7 | Ensure responsive, inclusive, participatory and representative decision-making at all levels | DPER | 2014 Guidelines on Appointments to State Boards | |
| | | | <i>Open Government Partnership National Action Plan 2016-2018</i> | |
| 16.8 | Broaden and strengthen the participation of developing countries in the institutions of global governance | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 16.9 | By 2030, provide legal identity for all, including birth registration | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| 16.10 | Ensure public access to information and protect fundamental freedoms, in accordance with national legislation and international agreements | DPER | Data Sharing and Governance Bill [Currently under development] | |
| | | | Open Data initiative | |
| | | | Freedom of Information (FOI) Act 2014 | |
| 16.a | Strengthen relevant national institutions, including through international cooperation, for building capacity at all levels, in particular in developing countries, to prevent violence and combat terrorism and crime | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|--|
| | Established a comprehensive statutory framework for the Oireachtas (National Parliament) to conduct inquiries within the current constitutional framework. |
| | This Act covers some 600 Bodies and provides that new public bodies, as they are established, will automatically be subject to FOI, unless they are specifically exempt. |
| | This Act brought some 180 public bodies within the Ombudsman's remit. This was the most significant extension within 30 years. The Ombudsman's remit was further extended in to include private nursing homes whose residents are in receipt of state support or subvention, (offering greater accountability and assurance to over 20,000 nursing homes residents and their families). Further extensions will be considered. |
| | To strengthen corporate governance in the Civil Service in line with international best practice. Departments/Offices were required to develop their own governance frameworks in line with the standard which set out how each Department and Office does its work and how it operates to deliver on its mandate and functions. |
| | Providing access to State Board opportunities to as wide a pool of candidates as possible; strengthening the performance of State Boards by identifying and securing high-quality membership; and; attaining a high level of transparency in the selection and appointment of board members by Ministers. |
| | Commits the Government to initiatives to promote inclusive, participatory and representative decision-making. These include the National Dialogue on Climate Action and Public Participation Networks for Local Authorities. This Plan also commits the Government to promoting citizen engagement in policy making and the design of public services. |
| | |
| | |
| | |
| | |
| | |
| | To provide a generalised legal basis for the sharing of data between public bodies while setting out appropriate principles and safeguards under which such sharing should take place. |
| | Provides a unique opportunity to use and re-use public data, to create the standard infrastructure necessary which fuels economic, governmental and societal activity across many different domains. |
| | This Act covers some 600 Bodies and provides that new public bodies, as they are established, will automatically be subject to FOI, unless they are specifically exempt. |
| | |
| | |

| Goals and Targets | | DEPT | Relevant National Policy | |
|---|---|---------|---|--|
| 16.b | Promote and enforce non-discriminatory laws and policies for sustainable development | DJE | Irish Human Rights and Equality Commission (IHREC) Act 2014 | |
| Goal 17. | | | | |
| Strengthen the means of implementation and revitalize the global partnership for sustainable development | | | | |
| Finance | | | | |
| 17.1 | Strengthen domestic resource mobilization, including through international support to developing countries, to improve domestic capacity for tax and other revenue collection | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |
| | | Revenue | International Capacity Building meetings such as the Forum of Tax Administrations Network or the OECD's Experts mobilisation meeting. | |
| 17.2 | Developed countries to implement fully their official development assistance commitments, including the commitment by many developed countries to achieve the target of 0.7 per cent of ODA/GNI to developing countries and 0.15 to 0.20 per cent of ODA/GNI to least developed countries ODA providers are encouraged to consider setting a target to provide at least 0.20 per cent of ODA/GNI to least developed countries | DFAT | | |
| | | DFIN | Ongoing Engagement with IFIs | |
| 17.3 | Mobilize additional financial resources for developing countries from multiple sources | DFAT | | |
| | | DFIN | Ongoing Engagement with IFIs | |
| 17.4 | Assist developing countries in attaining long-term debt sustainability through coordinated policies aimed at fostering debt financing, debt relief and debt restructuring, as appropriate, and address the external debt of highly indebted poor countries to reduce debt distress | DFAT | | |
| | | DFIN | Ongoing Engagement with IFIs | |
| 17.5 | Adopt and implement investment promotion regimes for least developed countries | DFAT | <i>One World, One Future</i> | |
| | | | <i>The Global Island</i> | |

| | National Policy Key Objective |
|--|--|
| | IHREC empowered to promote best practice, aided by the Public Service Duty commitment. |
| | |
| | |
| | Responsible for the assessment and collection of taxes and duties. The International Tax Division has responsibility for the development of Revenue’s role in capacity building. |
